Contents

1	Scope	1
1.1	Purpose	1
1.2	Overview of Structural Quality Measurement in Software.....	1
2	Conformance	2
3	Normative References.....	3
4	Terms and Definitions	4
5	Symbols (and Abbreviated Terms)	7
6	Weaknesses Included in Quality Measures and Representation Metamodels.....	8
6.1	Purpose	8
6.2	Software Product Inputs	8
6.3	Automated Source Code Quality Measure Elements.....	8
6.4	Automated Source Code Maintainability Measure Element Descriptions	9
6.5	Automated Source Code Performance Efficiency Measure Element Descriptions	11
6.6	Automated Source Code Reliability Measure Element Descriptions	15
6.7	Automated Source Code Security Measure Element Descriptions	23
6.8	Introduction to the Specification of Quality Measure Elements	32
6.9	Knowledge Discovery Metamodel (KDM).....	32
6.10	Software Patterns Metamodel Standard (SPMS).....	36
6.11	Reading guide.....	37
7	List of ASCQM Weaknesses.....	38
7.1	Weakness Category Maintainability	38
7.1.1	CWE-407 Algorithmic Complexity	38
7.1.2	CWE-478 Missing Default Case in Switch Statement.....	38
7.1.3	Weakness CWE-480 Use of Incorrect Operator	38
7.1.4	CWE-484 Omitted Break Statement in Switch	39
7.1.5	CWE-561 Dead Code	39
7.1.6	CWE-570 Expression is Always False	39
7.1.7	CWE-571 Expression is Always True	39
7.1.8	CWE-783 Operator Precedence Logic Error	40
7.1.9	CWE-1075 Unconditional Control Flow Transfer Outside of Switch Block	40
7.1.10	CWE-1121 Excessive McCabe Cyclomatic Complexity Value.....	40
7.1.11	CWE-1054 Invocation of a Control Element at an Unnecessarily Deep Horizontal Layer (Layer-skipping Call).....	41
7.1.12	CWE-1064 Invokable Control Element with Signature Containing an Excessive Number of Parameters	41
7.1.13	CWE-1084 Invokable Control Element with Excessive File or Data Access Operations	41
7.1.14	CWE-1051 Initialization with Hard-Coded Network Resource Configuration Data ...	42
7.1.15	CWE-1090 Method Containing Access of a Member Element from Another Class.....	42
7.1.16	CWE-1074 Class with Excessively Deep Inheritance	42
7.1.17	CWE-1086 Class with Excessive Number of Child Classes.....	43
7.1.18	CWE-1041 Use of Redundant Code (Copy-Paste)	43
7.1.19	CWE-1055 Multiple Inheritance from Concrete Classes.....	43
7.1.20	CWE-1045 Parent Class with a Virtual Destructor and a Child Class without a Virtual Destructor	44
7.1.21	CWE-1052 Excessive Use of Hard-Coded Literals in Initialization	44

ISO/IEC 5055:2021(E)

7.1.22	CWE-1048 Invokable Control Element with Large Number of Outward Calls (Excessive Coupling or Fan-out)	44
7.1.23	CWE-1095 Loop Condition Value Update within the Loop	45
7.1.24	CWE-1085 Invokable Control Element with Excessive Volume of Commented-out Code	45
7.1.25	CWE-1047 Modules with Circular Dependencies	45
7.1.26	CWE-1080 Source Code File with Excessive Number of Lines of Code	46
7.1.27	CWE-1062 Parent Class Element with References to Child Class	46
7.1.28	CWE-1087 Class with Virtual Method without a Virtual Destructor	46
7.1.29	CWE-1079 Parent Class without Virtual Destructor Method	47
7.1.30	Maintainability Detection Patterns	47
7.2	Weakness Category Performance Efficiency	48
7.2.1	CWE-401 Improper Release of Memory Before Removing Last Reference ('Memory Leak')	48
7.2.2	Weakness CWE-404 Improper Resource Shutdown or Release	48
7.2.3	CWE-424 Improper Protection of Alternate Path	49
7.2.4	CWE-772 Missing Release of Resource after Effective Lifetime	49
7.2.5	CWE-775 Missing Release of File Descriptor or Handle after Effective Lifetime	49
7.2.6	CWE-1073 Non-SQL Invokable Control Element with Excessive Number of Data Resource Access	49
7.2.7	CWE-1057 Data Access Operations Outside of Designated Data Manager Component	50
7.2.8	CWE-1043 Storable and Member Data Element Excessive Number of Aggregated Storable and Member Data Elements	50
7.2.9	CWE-1072 Data Resource Access without use of Connection Pooling	50
7.2.10	CWE-1060 Excessive Number of Inefficient Server-Side Data Accesses	51
7.2.11	CWE-1091 Use of Object without Invoking Destructor Method	51
7.2.12	CWE-1046 Creation of Immutable Text Using String Concatenation	51
7.2.13	CWE-1042 Static Member Data Element outside of a Singleton Class Element	52
7.2.14	CWE-1049 Excessive Data Query Operations in a Large Data Table	52
7.2.15	CWE-1067 Excessive Execution of Sequential Searches of Data Resource	52
7.2.16	CWE-1089 Large Data Table with Excessive Number of Indices	53
7.2.17	CWE-1094 Excessive Index Range Scan for a Data Resource	53
7.2.18	CWE-1050 Excessive Platform Resource Consumption within a Loop	53
7.2.19	CWE-1060 Excessive Number of Inefficient Server-Side Data Accesses	54
7.2.20	Performance Efficiency Detection Patterns	54
7.3	Weakness Category Reliability	54
7.3.1	CWE-119 Improper Restriction of Operations within the Bounds of a Memory Buffer	54
7.3.2	CWE-120 Buffer Copy without Checking Size of Input ('Classic Buffer Overflow')	55
7.3.3	CWE-123 Write-what-where Condition	55
7.3.4	CWE-125 Out-of-bounds Read	56
7.3.5	CWE-130 Improper Handling of Length Parameter Inconsistency	56
7.3.6	CWE-131 Incorrect Calculation of Buffer Size	56
7.3.7	CWE-170 Improper Null Termination	57
7.3.8	CWE-194 Unexpected Sign Extension	57
7.3.9	CWE-195 Signed to Unsigned Conversion Error	57
7.3.10	CWE-196 Unsigned to Signed Conversion Error	58
7.3.11	CWE-197 Numeric Truncation Error	58
7.3.12	CWE-248 Uncaught Exception	58
7.3.13	CWE-252 Unchecked Return Value	59
7.3.14	CWE-366 Race Condition within a Thread	59
7.3.15	CWE-369 Divide by Zero	59

7.3.16	CWE-390 Detection of Error Condition Without Action	59
7.3.17	CWE-391 Unchecked Error Condition	60
7.3.18	CWE-392 Missing Report of Error Condition	60
7.3.19	CWE-394 Unexpected Status Code or Return Value	60
7.3.20	CWE-401 Improper Release of Memory Before Removing Last Reference ('Memory Leak')	61
7.3.21	CWE-404 Improper Resource Shutdown or Release	61
7.3.22	CWE-415 Double Free	61
7.3.23	CWE-416 Use After Free	62
7.3.24	CWE-424 Improper Protection of Alternate Path	62
7.3.25	CWE-456 Missing Initialization of a Variable	62
7.3.26	CWE-459 Incomplete Cleanup	63
7.3.27	CWE-476 NULL Pointer Dereference	63
7.3.28	CWE-480 Use of Incorrect Operator	63
7.3.29	CWE-484 Omitted Break Statement in Switch	64
7.3.30	CWE-543 Use of Singleton Pattern Without Synchronization in a Multithreaded Context	64
7.3.31	CWE-562 Return of Stack Variable Address	64
7.3.32	CWE-567 Unsynchronized Access to Shared Data in a Multithreaded Context	64
7.3.33	CWE-595 Comparison of Object References Instead of Object Contents	65
7.3.34	CWE-597 Use of Wrong Operator in String Comparison	65
7.3.35	CWE-662 Improper Synchronization	65
7.3.36	CWE-667 Improper Locking	66
7.3.37	CWE-672 Operation on a Resource after Expiration or Release	67
7.3.38	CWE-681 Incorrect Conversion between Numeric Types	67
7.3.39	CWE-682 Incorrect Calculation	67
7.3.40	CWE-703 Improper Check or Handling of Exceptional Conditions	68
7.3.41	CWE-704 Incorrect Type Conversion or Cast	68
7.3.42	CWE-758 Reliance on Undefined, Unspecified, or Implementation-Defined Behavior	68
7.3.43	CWE-764 Multiple Locks of a Critical Resource	69
7.3.44	CWE-772 Missing Release of Resource after Effective Lifetime	69
7.3.45	CWE-775 Missing Release of File Descriptor or Handle after Effective Lifetime	69
7.3.46	CWE-786 Access of Memory Location Before Start of Buffer	70
7.3.47	CWE-787 Out-of-bounds Write	70
7.3.48	CWE-788 Access of Memory Location After End of Buffer	70
7.3.49	CWE-805 Buffer Access with Incorrect Length Value	71
7.3.50	CWE-820 Missing Synchronization	71
7.3.51	CWE-821 Incorrect Synchronization	71
7.3.52	7.3.52 CWE-822 Untrusted Pointer Dereference	72
7.3.53	7.3.53 CWE-823 Use of Out-of-range Pointer Offset	72
7.3.54	CWE-824 Access of Uninitialized Pointer	72
7.3.55	CWE-825 Expired Pointer Dereference	73
7.3.56	CWE-833 Deadlock	73
7.3.57	CWE-835 Loop with Unreachable Exit Condition ('Infinite Loop')	73
7.3.58	CWE-908 Use of Uninitialized Resource	74
7.3.59	CWE-1083 Data Access from Outside Designated Data Manager Component	74
7.3.60	CWE-1058 Invokable Control Element in Multi-Thread Context with non-Final Static Storable or Member Element	74
7.3.61	CWE-1096 Singleton Class Instance Creation without Proper Locking or Synchronization	75
7.3.62	CWE-1087 Class with Virtual Method without a Virtual Destructor	75
7.3.63	CWE-1079 Parent Class without Virtual Destructor Method	75

ISO/IEC 5055:2021(E)

7.3.64	CWE-1045 Parent Class with a Virtual Destructor and a Child Class without a Virtual Destructor	76
7.3.65	CWE-1051 Initialization with Hard-Coded Network Resource Configuration Data ...	76
7.3.66	CWE-1088 Synchronous Access of Remote Resource without Timeout.....	76
7.3.67	CWE-1066 Missing Serialization Control Element	77
7.3.68	CWE-1070 Serializable Storable Data Element with non-Serializable Item Elements	77
7.3.69	CWE-1097 Persistent Storable Data Element without Associated Comparison Control Element.....	77
7.3.70	CWE-1098 Data Element containing Pointer Item without Proper Copy Control Element.....	77
7.3.71	CWE-1082 Class Instance Self Destruction Control Element.....	78
7.3.72	CWE-1077 Floating Point Comparison with Incorrect Operator	78
7.3.73	CWE-665 Improper Initialization.....	78
7.3.74	CWE-457 Use of Uninitialized Variable	79
7.3.75	Reliability Detection Patterns	79
7.4	Weakness Category Security	80
7.4.1	Improper Restriction of Operations within the Bounds of a Memory Buffer.....	80
7.4.2	CWE-120 Buffer Copy without Checking Size of Input ('Classic Buffer Overflow').....	81
7.4.3	CWE-123 Write-what-where Condition	81
7.4.4	CWE-125 Out-of-bounds Read	82
7.4.5	CWE-129 Improper Validation of Array Index	82
7.4.6	CWE-130 Improper Handling of Length Parameter Inconsistency.....	82
7.4.7	CWE-131 Incorrect Calculation of Buffer Size.....	83
7.4.8	CWE-134 Use of Externally-Controlled Format String.....	83
7.4.9	CWE-194 Unexpected Sign Extension	83
7.4.10	CWE-195 Signed to Unsigned Conversion Error	83
7.4.11	CWE-196 Unsigned to Signed Conversion Error	84
7.4.12	CWE-197 Numeric Truncation Error.....	84
7.4.13	CWE-22 Improper Limitation of a Pathname to a Restricted Directory ('Path Traversal')	84
7.4.14	CWE-23 Relative Path Traversal.....	85
7.4.15	CWE-252 Unchecked Return Value.....	85
7.4.16	CWE-259 Use of Hard-coded Password.....	85
7.4.17	CWE-321 Use of Hard-coded Cryptographic Key	86
7.4.18	CWE-36 Absolute Path Traversal	86
7.4.19	CWE-366 Race Condition within a Thread	86
7.4.20	CWE-369 Divide by Zero	87
7.4.21	CWE-401 Improper Release of Memory Before Removing Last Reference ('Memory Leak')	87
7.4.22	CWE-404 Improper Resource Shutdown or Release	87
7.4.23	CWE-424 Improper Protection of Alternate Path.....	88
7.4.24	CWE-434 Unrestricted Upload of File with Dangerous Type	88
7.4.25	CWE-456 Missing Initialization of a Variable.....	88
7.4.26	CWE-457 Use of Uninitialized Variable	89
7.4.27	CWE-477 Use of Obsolete Function.....	89
7.4.28	CWE-480 Use of Incorrect Operator	89
7.4.29	CWE-502 Deserialization of Untrusted Data	90
7.4.30	CWE-543 Use of Singleton Pattern Without Synchronization in a Multithreaded Context	90
7.4.31	CWE-564 SQL Injection: Hibernate	90
7.4.32	CWE-567 Unsynchronized Access to Shared Data in a Multithreaded Context	90
7.4.33	CWE-570 Expression is Always False	91

7.4.34	CWE-571 Expression is Always True	91
7.4.35	CWE-606 Unchecked Input for Loop Condition	91
7.4.36	CWE-643 Improper Neutralization of Data within XPath Expressions ('XPath Injection')	92
7.4.37	CWE-652 Improper Neutralization of Data within XQuery Expressions ('XQuery Injection')	92
7.4.38	CWE-662 Improper Synchronization	92
7.4.39	CWE-665 Improper Initialization	93
7.4.40	CWE-667 Improper Locking	93
7.4.41	CWE-672 Operation on a Resource after Expiration or Release	94
7.4.42	CWE-681 Incorrect Conversion between Numeric Types	94
7.4.43	CWE-682 Incorrect Calculation	94
7.4.44	CWE-732 Incorrect Permission Assignment for Critical Resource.....	95
7.4.45	CWE-77 Improper Neutralization of Special Elements used in a Command ('Command Injection')	95
7.4.46	CWE-772 Missing Release of Resource after Effective Lifetime.....	95
7.4.47	CWE-775 Missing Release of File Descriptor or Handle after Effective Lifetime.....	96
7.4.48	CWE-778 Insufficient Logging	96
7.4.49	CWE-78 Improper Neutralization of Special Elements used in an OS Command ('OS Command Injection')	96
7.4.50	CWE-783 Operator Precedence Logic Error	97
7.4.51	CWE-786 Access of Memory Location Before Start of Buffer	97
7.4.52	CWE-787 Out-of-bounds Write	97
7.4.53	CWE-788 Access of Memory Location After End of Buffer	98
7.4.54	CWE-789 Uncontrolled Memory Allocation	98
7.4.55	CWE-79 Improper Neutralization of Input During Web Page Generation ('Cross-site Scripting')	98
7.4.56	CWE-798 Use of Hard-coded Credentials.....	98
7.4.57	CWE-805 Buffer Access with Incorrect Length Value	99
7.4.58	CWE-820 Missing Synchronization.....	99
7.4.59	CWE-821 Incorrect Synchronization	100
7.4.60	CWE-822 Untrusted Pointer Dereference.....	100
7.4.61	CWE-823 Use of Out-of-range Pointer Offset	100
7.4.62	CWE-824 Access of Uninitialized Pointer.....	101
7.4.63	CWE-825 Expired Pointer Dereference	101
7.4.64	CWE-835 Loop with Unreachable Exit Condition ('Infinite Loop')	101
7.4.65	CWE-88 Argument Injection or Modification	101
7.4.66	CWE-89 Improper Neutralization of Special Elements used in an SQL Command ('SQL Injection')	102
7.4.67	CWE-90 Improper Neutralization of Special Elements used in an LDAP Query ('LDAP Injection')	102
7.4.68	CWE-91 XML Injection (aka Blind XPath Injection)	102
7.4.69	CWE-99 Improper Control of Resource Identifiers ('Resource Injection').....	103
7.4.70	CWE-611 Improper Restriction of XML External Entity Reference ('XXE')	103
7.4.71	CWE-1057 Data Access Control Element from Outside Designated Data Manager Component.....	103
7.4.72	CWE-415 Double Free	104
7.4.73	CWE-416 Use After Free	104
7.4.74	Security Detection Patterns	104
8	ASCQM Weakness Detection Patterns.....	107
8.1	Specification of Detection Patterns.....	107
8.2	ASCQM Check Index of Array Access.....	107

ISO/IEC 5055:2021(E)

8.3	ASCQM Check Input of Memory Manipulation Primitives.....	108
8.4	ASCQM Ban String Manipulation Primitives without Boundary Checking Capabilities	109
8.5	ASCQM Check Input of String Manipulation Primitives with Boundary Checking Capabilities.....	109
8.6	ASCQM Ban Use of Expired Pointer.....	110
8.7	ASCQM Ban Input Acquisition Primitives without Boundary Checking Capabilities	111
8.8	ASCQM Check Offset used in Pointer Arithmetic	112
8.9	ASCQM Sanitize User Input used as Pointer	113
8.10	ASCQM Initialize Pointers before Use.....	114
8.11	ASCQM Check NULL Pointer Value before Use.....	115
8.12	ASCQM Ban Use of Expired Resource	116
8.13	ASCQM Ban Double Release of Resource	116
8.14	ASCQM Implement Copy Constructor for Class with Pointer Resource.....	117
8.15	ASCQM Ban Free Operation on Pointer Received as Parameter	118
8.16	ASCQM Ban Delete of VOID Pointer	119
8.17	ASCQM Ban Variable Increment or Decrement Operation in Operations using the Same Variable.....	119
8.18	ASCQM Ban Reading and Writing the Same Variable Used as Assignment Value	120
8.19	ASCQM Handle Return Value of Resource Operations.....	121
8.20	ASCQM Ban Incorrect Numeric Conversion of Return Value.....	122
8.21	ASCQM Handle Return Value of Must Check Operations	123
8.22	ASCQM Check Return Value of Resource Operations Immediately.....	124
8.23	ASCQM Ban Useless Handling of Exceptions.....	125
8.24	ASCQM Ban Incorrect Object Comparison.....	125
8.25	ASCQM Ban Assignment Operation Inside Logic Blocks	126
8.26	ASCQM Ban Comparison Expression Outside Logic Blocks.....	126
8.27	ASCQM Ban Incorrect String Comparison.....	127
8.28	ASCQM Ban Logical Operation with a Constant Operand	128
8.29	ASCQM Implement Correct Object Comparison Operations.....	128
8.30	ASCQM Ban Comma Operator from Delete Statement.....	129
8.31	ASCQM Release in Destructor Memory Allocated in Constructor.....	130
8.32	ASCQM Release Memory after Use with Correct Operation.....	131
8.33	ASCQM Implement Required Operations for Manual Resource Management.....	132
8.34	ASCQM Release Platform Resource after Use.....	133
8.35	ASCQM Release Memory After Use.....	134
8.36	ASCQM Implement Virtual Destructor for Classes Derived from Class with Virtual Destructor.....	135
8.37	ASCQM Implement Virtual Destructor for Parent Classes.....	135
8.38	ASCQM Release File Resource after Use in Operation.....	136
8.39	ASCQM Implement Virtual Destructor for Classes with Virtual Methods.....	137
8.40	ASCQM Ban Self Destruction.....	138
8.41	ASCQM Manage Time-Out Mechanisms in Blocking Synchronous Calls.....	138
8.42	ASCQM Ban Non-Final Static Data in Multi-Threaded Context	139
8.43	ASCQM Ban Non-Serializable Elements in Serializable Objects	140
8.44	ASCQM Ban Hard-Coded Literals used to Connect to Resource.....	141
8.45	ASCQM Ban Unintended Paths.....	142
8.46	ASCQM Ban Incorrect Float Number Comparison	143
8.47	ASCQM Singleton Creation without Proper Locking in Multi-Threaded Context.....	143
8.48	ASCQM Ban Incorrect Numeric Implicit Conversion	145
8.49	ASCQM Data Read and Write without Proper Locking in Multi-Threaded Context .	146
8.50	ASCQM Ban Incorrect Synchronization Mechanisms	147

8.51	ASCQM Ban Resource Access without Proper Locking in Multi-Threaded Context	148
8.52	ASCQM Ban Incorrect Type Conversion	149
8.53	ASCQM Ban Return of Local Variable Address	150
8.54	ASCQM Ban Storage of Local Variable Address in Global Variable	151
8.55	ASCQM Ban While TRUE Loop Without Path to Break	151
8.56	ASCQM Ban Unmodified Loop Variable Within Loop	152
8.57	ASCQM Check and Handle ZERO Value before Use as Divisor	153
8.58	ASCQM Ban Creation of Lock on Private Non-Static Object to Access Private Static Data	154
8.59	ASCQM Release Lock After Use	154
8.60	ASCQM Ban Sleep Between Lock Acquisition and Release	155
8.61	ASCQM Ban Creation of Lock on Non-Final Object	157
8.62	ASCQM Ban Creation of Lock on Inappropriate Object Type	157
8.63	ASCQM NULL Terminate Output of String Manipulation Primitives	158
8.64	ASCQM Release File Resource after Use in Class	159
8.65	ASCQM Use Break in Switch Statement	160
8.66	ASCQM Catch Exceptions	161
8.67	ASCQM Ban Empty Exception Block	162
8.68	ASCQM Initialize Resource before Use	162
8.69	ASCQM Ban Incompatible Lock Acquisition Sequences	164
8.70	ASCQM Ban Use of Thread Control Primitives with Known Deadlock Issues	164
8.71	ASCQM Ban Buffer Size Computation Based on Bitwise Logical Operation	165
8.72	ASCQM Ban Buffer Size Computation Based on Array Element Pointer Size	166
8.73	ASCQM Ban Buffer Size Computation Based on Incorrect String Length Value	167
8.74	ASCQM Ban Sequential Acquisitions of Single Non-Reentrant Lock	168
8.75	ASCQM Initialize Variables	169
8.76	ASCQM Ban Allocation of Memory with Null Size	170
8.77	ASCQM Ban Double Free on Pointers	170
8.78	ASCQM Initialize Variables before Use	171
8.79	ASCQM Ban Self Assignment	172
8.80	ASCQM Check Boolean Variables are Updated in Different Conditional Branches before Use	173
8.81	ASCQM Ban Not Operator on Operand of Bitwise Operation	174
8.82	ASCQM Ban Not Operator on Non-Boolean Operand of Comparison Operation	174
8.83	ASCQM Ban Incorrect Joint Comparison	175
8.84	ASCQM Secure XML Parsing with Secure Options	176
8.85	ASCQM Secure Use of Unsafe XML Processing with Secure Parser	178
8.86	ASCQM Sanitize User Input used in Path Manipulation	179
8.87	ASCQM Sanitize User Input used in SQL Access	180
8.88	ASCQM Sanitize User Input used in Document Manipulation Expression	181
8.89	ASCQM Sanitize User Input used in Document Navigation Expression	183
8.90	ASCQM Sanitize User Input used to access Directory Resources	184
8.91	ASCQM Sanitize Stored Input used in User Output	185
8.92	ASCQM Sanitize User Input used in User Output	187
8.93	ASCQM Sanitize User Input used in System Command	188
8.94	ASCQM Ban Use of Deprecated Libraries	189
8.95	ASCQM Sanitize User Input used as Array Index	190
8.96	ASCQM Check Input of Memory Allocation Primitives	191
8.97	ASCQM Sanitize User Input used as String Format	192
8.98	ASCQM Sanitize User Input used in Loop Condition	193
8.99	ASCQM Sanitize User Input used as Serialized Object	195
8.100	ASCQM Log Caught Security Exceptions	196
8.101	ASCQM Ban File Creation with Default Permissions	197

ISO/IEC 5055:2021(E)

8.102	ASCQM Ban Use of Prohibited Low-Level Resource Management Functionality	198
8.103	ASCQM Ban Excessive Size of Index on Columns of Large Tables	200
8.104	ASCQM Implement Index Required by Query on Large Tables	201
8.105	ASCQM Ban Excessive Number of Index on Columns of Large Tables.....	202
8.106	ASCQM Ban Excessive Complexity of Data Resource Access.....	202
8.107	ASCQM Ban Expensive Operations in Loops.....	203
8.108	ASCQM Limit Number of Aggregated Non-Primitive Data Types.....	205
8.109	ASCQM Ban Excessive Number of Data Resource Access from non-stored SQL Procedure.....	206
8.110	ASCQM Ban Excessive Number of Data Resource Access from non-SQL Code	207

Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of document should be noted (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents) or the IEC list of patent declarations received (see <http://patents.iec.ch>).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by the Object Management Group (OMG) (as Automated Source Code Quality Measures [ASCQM], Version 1.0) and drafted in accordance with its editorial rules. It was adopted, under the JTC 1 PAS procedure, by Joint Technical Committee ISO/IEC JTC 1, *Information technology*.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.

ISO/IEC 5055:2021(E)

Introduction

Computers are being used in an increasing variety of application areas where their correct operation is critical for business accuracy or human safety. Developing or selecting trustworthy, dependable software products is of prime importance. Quantitative evaluation of software product quality is key to ensuring correct performance. This assurance requires rigorous measures of software product quality characteristics. Defining these measures in an international standard is important for standardizing the use of such measures by public and commercial organizations.

ISO/IEC 5055:2020 Automated Source Code Quality Measures defines measures at the software product level (source code) for four of the quality characteristics defined in the software product quality model presented in ISO/IEC 25010-2. These measures conform to the definitions of quality characteristics in ISO/IEC 25010-2 that they quantify. Each measure is calculated from counts of severe weaknesses in the source code that affect the quality characteristic being measured. Each weakness is associated with one or more detection patterns that can guide the development of automated tools for quality analysis of software products. The weaknesses included in each measure were selected by an international team of software engineering experts based on the severity of their impact on a software product quality characteristic.

ISO/IEC 25023 defines software measures for the quality model in ISO/IEC 25010-2, but most all of these measures are at the behavioral level. For instance, a measure for availability is defined as mean downtime, which does not identify the problems in the software that caused the downtime. ISO/IEC 5055:2020 therefore supplements ISO/IEC 25023 by defining software measures at the level of weaknesses in the source code. Thus, availability would be measured by the existence of software weaknesses that cause downtime such as poor error handling or missing timeouts. ISO/IEC 5055:2020 adds strong product level measurement to support the ISO/IEC 25000 software product quality standards.

ISO/IEC 5055:2020 may be revised from time to time based on new severe weaknesses being added or existing weaknesses in the model becoming less severe because of advances in computer science. Thus, this will be a standard that adapts to changes in the technology of computing.

Information technology — Software measurement — Software quality measurement — Automated source code quality measures

1 Scope

1.1 Purpose

The measures in this standard were calculated from detecting and counting violations of good architectural and coding practices in the source code that could result in unacceptable operational risks or excessive costs. Establishing standards for these measures at the source code level is important because they have been used in outsourcing and system development contracts without having international standards to reference. For instance, the ISO/IEC 25000 series of standards that govern software product quality provide only a small set of measures at the source code level.

A primary objective of updating these measures was to extend their applicability to embedded software, which is especially important for the growing implementation of embedded devices and the Internet of Things. Functionality that has traditionally been implemented in IT applications is now being moved to embedded chips. Since the weaknesses included in the measures specified in this document have been found to be applicable to all forms of software, embedded software is not treated separately in this specification.

1.2 Overview of Structural Quality Measurement in Software

Measurement of the structural quality characteristics of software has a long history in software engineering (Curtis, 1980). These characteristics are also referred to as the structural, internal, technical, or engineering characteristics of software source code. Software quality characteristics are increasingly incorporated into development and outsourcing contracts as the equivalent of service level agreements. That is, target thresholds based on structural quality measures are being written into contracts as acceptance criteria for delivered software. Currently there are no standards for most of the software structural quality measures used in contracts. ISO/IEC 25023 purports to address these measures, but most of them are measures of external behavior and do not sufficiently define measures that can be developed from source code during development. Consequently, providers are subject to different interpretations and calculations of common structural quality characteristics in each contract. This specification addresses one aspect of this problem by providing a specification for measuring four structural quality characteristics from the source code—Reliability, Security, Performance Efficiency, and Maintainability.

Recent advances in measuring the structural quality of software involve detecting violations of good architectural and coding practice from statically analyzing source code. Violations of good architectural and design practice can also be detected from statically analyzing design specifications written in a design language with a formal syntax and semantics. Good architectural and coding practices can be stated as rules for engineering software products. Violations of these rules will be called weaknesses in this specification to be consistent with terms used in the Common Weakness Enumeration (Martin & Barnum, 2006) which lists many of the weaknesses used in several of these measures.

ISO/IEC 5055:2021(E)

The Automated Source Code Quality Measures are correlated measures rather than absolute measures. That is, since they do not measure all possible weaknesses in each of the four areas, they do not provide absolute measures. However, since they include counts of what industry experts have determined to be most severe weaknesses, they provide strong indicators of the quality of a software system in each area. In most instances they will be highly correlated with the probability of operational or cost problems related to each measure's area.

Recent research in analyzing structural quality weaknesses has identified common patterns of code structures that can be used to detect weaknesses. Many of these 'Detection Patterns' are shared across different weaknesses. Detection Patterns will be used in this specification to organize and simplify the presentation of weaknesses underlying the four structural quality measures. Each weakness will be described as a quality measure element to remain consistent with ISO/IEC 25020. Each quality measure element will be represented as one or more Detection Patterns. Many quality measure elements (weaknesses) will share one or more Detection Patterns in common.

The normative portion of this specification represents each quality attribute (weakness) and quality measure element (detection pattern) using the Structured Patterns Metamodel Standard (SPMS). The code-based elements in these patterns are represented using the Knowledge Discovery Metamodel (KDM). The score for each of the four Automated Source Code Quality Measures from their quality measure elements is calculated by counting the number of detection patterns for each weakness, and then summing these numbers for all the weaknesses included in the specific quality characteristic measure.

2 Conformance

Implementations of this specification should be able to demonstrate the following attributes to claim conformance—automated, objective, transparent, and verifiable.

- **Automated**—The analysis of the source code and counting of weaknesses shall be fully automated. The initial inputs required to prepare the source code for analysis include the source code of the application, the artifacts and information needed to configure the application for operation, and any available description of the architectural layers in the application.
- **Objective**—After the source code has been prepared for analysis using the information provided as inputs, the analysis, calculation, and presentation of results shall not require further human intervention. The analysis and calculation shall be able to repeatedly produce the same results and outputs on the same body of software.
- **Transparent**—Implementations that conform to this specification shall clearly list all source code (including versions), non-source code artifacts, and other information used to prepare the source code for submission to the analysis.
- **Verifiable**—Compliance with this specification requires that an implementation shall state the assumptions/heuristics it uses with sufficient detail so that the calculations may be independently verified by third parties. In addition, all inputs used shall be clearly described and itemized so that they can be audited by a third party.

3 Normative References

The following normative documents contain provisions, which, through reference in this text, constitute provisions of this specification. Dated references, subsequent amendments to, or revisions of any of these publications do not apply.

4 Terms and Definitions

For the purposes of this specification, the following terms and definitions apply.

4.1

Automated Function Points

a specification for automating the counting of Function Points that mirrors as closely as possible the counting guidelines of the International Function Point User Group. (OMG, formal 2014-01-03)

4.2

Common Weakness Enumeration

a repository maintained by MITRE Corporation of known weaknesses in software that can be exploited to gain unauthorized entry into a software system. (cwe.mitre.org)

4.3

Contributing Weakness

a weakness that is represented as a child of a parent weakness in the Common Weakness Enumeration, that is, a variant instantiation of the parent weakness (cwe.mitre.org)

4.4

Cyclomatic Complexity

A measure of control flow complexity developed by Thomas McCabe based on a graph-theoretic analysis that reduces the control flow of a computer program to a set of edges, vertices, and their attributes that can be quantified. (McCabe, 1976)

4.5

Detection Pattern

an abstract representation of a set of parsed program elements and their relations described in a formal representation language that provides guidance for detecting a specific weakness in the software source code.

4.6

Internal Software Quality

the degree to which a set of static attributes of a software product satisfy stated and implied needs for the software product to be used under specified conditions. This will be referred to as software structural quality, or simply structural quality in this specification. (ISO/IEC 25010)

4.7

Maintainability

capability of a product to be modified by the intended maintainers with effectiveness and efficiency (ISO/IEC 25010)

4.8

Parent Weakness

a weakness in the Common Weakness Enumeration that has numerous possible instantiations in software that are represented by its relation to child CWEs (cwe.mitre.org)

4.9

Performance Efficiency

capability of a product to use an appropriate amount of resources under stated conditions (ISO/IEC 25010)

4.10

Quality Measure Element

a measure defined in terms of a software quality attribute and the measurement method for quantifying it, including optionally the transformation by a mathematical function (ISO/IEC 25010)

4.11

Reliability

capability a product, to perform specified functions under specified conditions for a specified period of time (ISO/IEC 25010)

4.12

Security

capability of a product to protect information and data so that persons or other products or systems have the degree of data access appropriate to their types and levels of authorization, and to defend against attack patterns by malicious actors (ISO/IEC 25010)

4.13

Software Product

a set of computer programs, procedures, and possibly associated documentation and data. (ISO/IEC 25010)

4.14

Software Product Quality Model

a model that categorizes product quality properties into eight characteristics (functional suitability, reliability, performance efficiency, usability, security, compatibility, maintainability, and portability). Each characteristic is composed of a set of related sub-characteristics. (ISO/IEC 25010)

4.15

Software Quality

degree to which a software product satisfies stated and implied needs when used under specified conditions. (ISO/IEC 25010)

4.16

Software Quality Attribute

an inherent property or characteristic of software that can be distinguished quantitatively or qualitatively by human or automated means. (derived from ISO/IEC 25010)

4.17

Software Quality Characteristic

a set of software quality attributes that affect a specific category of software quality outcomes. (similar to but more specific than ISO/IEC 25010)

4.18

Software Quality Characteristic Measure

a software quality measure derived from measuring the attributes related to a specific software quality characteristic. (ISO/IEC 25020)

4.19

Software Quality Measure Element

a measure defined in terms of a software quality attribute and the measurement method for quantifying it, including optionally the transformation by a mathematical function. (ISO/IEC 25010)

4.20

Software Quality Measurement

ISO/IEC 5055:2021(E)

(verb) a set of operations having the object of determining a value of a software quality measure. (ISO/IEC 25010)

4.21

Software Quality Model

a defined set of software characteristics, and of relationships between them, which provides a framework for specifying software quality requirements and evaluating the quality of a software product. (derived from ISO/IEC 25010)

4.22

Software Quality Rule

an architectural or coding practice or convention that represents good software engineering practice and avoids problems in software development, maintenance, or operations. Violations of these quality rules produces software anti-patterns.

4.23

Software Quality Sub-characteristic

a sub-category of a software quality characteristic to which software quality attributes and their software quality measure elements are conceptually related. (derived from ISO/IEC 25010)

4.24

Structural Element

a component of software code that can be uniquely identified and counted such as a token, decision, variable, etc.

4.25

Structural Quality

the degree to which a set of static attributes of a software product satisfy stated and implied needs for the software product to be used under specified conditions—a component of software quality. This concept is referred to as internal software quality in ISO/IEC 25010.

4.26

Weakness

is a specific structure of program elements in the software source code, sometimes referred to as a software anti-pattern, that is inconsistent with good architectural or coding practice, violates a software quality rule, and can lead to operational or cost problems. (derived from cwe.mitre.com)

4.27

Weakness Pattern

A formal description constructed from arranging the elements output from parsing software source code into a software pattern metamodel structure that is identified as a weakness.

5 Symbols (and Abbreviated Terms)

AFP — Automated Function Points

ASCMM — Automated Source Code Maintainability Measure

ASCPem — Automated Source Code Performance Efficiency Measure

ASCQM — Automated Source Code Quality Measure

ASCRM — Automated Source Code Reliability Measure

ASCSM — Automated Source Code Security Measure

CWE — Common Weakness Enumeration

CISQ — Consortium for IT Software Quality

KDM — Knowledge Discovery Metamodel

SMM — Structured Metrics Metamodel

SPMS — Structured Pattern Metamodel Standard

ISO/IEC 5055:2021(E)

6 Weaknesses Included in Quality Measures and Representation Metamodels

6.1 Purpose

The purpose of this clause is to enumerate the weaknesses constituting each measure and to provide a simple description of each measure. Clause 6.2 describes the input needed for analyzing the source code to detect the weaknesses. Clause 6.2 introduces the concept of weaknesses as quality measure elements in calculating the measures. Clauses 6.3 to 6.6 enumerate the weaknesses included in each measure. These clauses also indicate the status of each weakness as a parent weakness or a contributor weakness that represents a specific instantiation of a parent weakness. Clause 6.8 introduces how weaknesses will be represented in formal metalanguages. Clauses 6.9 and 10 describe the metamodels that will be used for specifying weaknesses and their detection patterns. Clause 6.11 provides a reading guide for understanding the content of Clauses 6.9 and 6.10.

6.2 Software Product Inputs

The following inputs are needed by static code analyzers to interpret violations of the software quality rules that would be included in individual software quality measure elements.

- The entire source code for the application being analyzed.
- All materials and information required to prepare the application for production.
- A list of vetted libraries that are being used to sanitize data against potential attacks.
- What routines/API calls are being used for remote authentication, to any custom initialization and clean up routines, to synchronize resources, or to neutralize accepted file types or the names of resources.

Static code analyzers will also need a list of the violations that constitute each quality element in the Automated Source Code Security Measure.

6.3 Automated Source Code Quality Measure Elements

The weaknesses violating software quality rules that compose the CISQ Automated Source Code Quality Measures are grouped by quality measure in the clauses 6.4 through 6.7. Some of the weaknesses are included in more than one quality measure because they can cause several types of problems. The Common Weakness Enumeration repository (CWE, Annex B) has recently been expanded to include weaknesses from quality characteristics beyond security. All weaknesses included in these measures are identified by their CWE number from the repository. In most cases the description of CWEs is taken from information in the online repository (cwe.mitre.org). The mappings of the weaknesses from the previous CISQ measures to the current measures are presented in Annex C.

Some weaknesses drawn from the CWE repository (parent weaknesses) have related weaknesses listed as 'contributing weaknesses' ('children' in the CWE). Contributing weaknesses represent variants of how the parent weakness can be instantiated in software. In the following tables the cells containing CWE IDs for parents are presented in a darker blue than the cells containing contributing weaknesses. Based on their severity, not all children were included. The parent contributor relationships are informative material and are presented for informational purposes only. All weaknesses listed in these tables, regardless of whether they are parents or contributors, are to be treated as Quality Measure Elements in calculating the measures presented in 6.4 through 6.7.

6.4 Automated Source Code Maintainability Measure Element Descriptions

The quality measure elements (weaknesses violating software quality rules) that compose the CISQ Automated Source Code Maintainability Measure are presented in Table 1. This measure contains 29 parent weaknesses and no contributing weaknesses. Thus, Maintainability contains 29 Quality Measure Elements.

Table 1 — Quality Measure Elements for Automated Source Code Maintainability Measure

CWE #	Descriptor	Weakness Description
CWE-407	Algorithmic Complexity	An algorithm in a product has an inefficient worst-case computational complexity that may be detrimental to system performance and can be triggered by an attacker, typically using crafted manipulations that ensure that the worst case is being reached.
CWE-478	Missing Default Case in Switch Statement	The code does not have a default case in a switch statement, which might lead to complex logical errors and resultant weaknesses.
CWE-480	Use of Incorrect Operator	The programmer accidentally uses the wrong operator, which changes the application logic in security-relevant ways.
CWE-484	Omitted Break Statement in Switch	The program omits a break statement within a switch or similar construct, causing code associated with multiple conditions to execute. This can cause problems when the programmer only intended to execute code associated with one condition.
CWE-561	Dead code	The software contains dead code that can never be executed. (Thresholds are set at 5% logically dead code or 0% for code that is structurally dead. Code that exists in the source but not in the object does not count.)
CWE-570	Expression is Always False	The software contains an expression that will always evaluate to false.
CWE-571	Expression is Always True	The software contains an expression that will always evaluate to true.
CWE-783	Operator Precedence Logic Error	The program uses an expression in which operator precedence causes incorrect logic to be used.
CWE-1041	Use of Redundant Code (Copy-Paste)	The software has multiple functions, methods, procedures, macros, etc. that contain the same code. (The default threshold for each instance of copy-pasted code sets the maximum number of allowable copy-pasted instructions at 10% of the total instructions in the instance, <i>alternate thresholds can be set prior to analysis</i>).

ISO/IEC 5055:2021(E)

CWE #	Descriptor	Weakness Description
CWE-1045	Parent Class with a Virtual Destructor and a Child Class without a Virtual Destructor	A parent class has a virtual destructor method, but the parent has a child class that does not have a virtual destructor.
CWE-1047	Modules with Circular Dependencies	The software contains modules in which one module has references that cycle back to itself, i.e., there are circular dependencies.
CWE-1048	Invokable Control Element with Large Number of Outward Calls (Excessive Coupling or Fan-out)	The code contains callable control elements that contain an excessively large number of references to other application objects external to the context of the callable, i.e. a Fan-Out value that is excessively large. (default threshold for the maximum number of references is 5, <i>alternate threshold can be set prior to analysis</i>)
CWE-1051	Initialization with Hard-Coded Network Resource Configuration Data	The software initializes data using hard-coded values that act as network resource identifiers.
CWE-1052	Excessive Use of Hard-Coded Literals in Initialization	The software initializes a data element using a hard-coded literal that is not a simple integer or static constant element.
CWE-1054	Invocation of a Control Element at an Unnecessarily Deep Horizontal Layer (Layer-skipping Call)	The code at one architectural layer invokes code that resides at a deeper layer than the adjacent layer, i.e., the invocation skips at least one layer, and the invoked code is not part of a vertical utility layer that can be referenced from any horizontal layer.
CWE-1055	Multiple Inheritance from Concrete Classes	The software contains a class with inheritance from more than one concrete class.
CWE-1062	Parent Class Element with References to Child Class	The code has a parent class that contains references to a child class, its methods, or its members.
CWE-1064	Invokable Control Element with Signature Containing an Excessive Number of Parameters	The software contains a function, subroutine, or method whose signature has an unnecessarily large number of parameters/arguments. (default threshold for the maximum number of parameters is 7, <i>alternate threshold can be set prior to analysis</i>).
CWE-1074	Class with Excessively Deep Inheritance	A class has an inheritance level that is too high, i.e., it has many parent classes. (default threshold for maximum Inheritance levels is 7, <i>alternate threshold can be set prior to analysis</i>).
CWE-1075	Unconditional Control Flow Transfer outside of Switch Block	The software performs unconditional control transfer (such as a "goto") in code outside of a branching structure such as a switch block.

CWE #	Descriptor	Weakness Description
CWE-1079	Parent Class without Virtual Destructor Method	A parent class contains one or more child classes, but the parent class does not have a virtual destructor method.
CWE-1080	Source Code File with Excessive Number of Lines of Code	A source code file has too many lines of code. (default threshold for the maximum lines of code is 1000, <i>alternate threshold can be set prior to analysis</i>).
CWE-1084	Invokable Control Element with Excessive File or Data Access Operations	A function or method contains too many operations that utilize a data manager or file resource. (default threshold for the maximum number of SQL or file operations is 7, <i>alternate threshold can be set prior to analysis</i>).
CWE-1085	Invokable Control Element with Excessive Volume of Commented-out Code	A function, method, procedure, etc. contains an excessive amount of code that has been commented out within its body. (default threshold for the maximum percent of commented-out instructions is 2%, <i>alternate threshold can be set prior to analysis</i>).
CWE-1086	Class with Excessive Number of Child Classes	A class contains an unnecessarily large number of children. (default threshold for the maximum number of children of a class is 10, <i>alternate threshold can be set prior to analysis</i>).
CWE-1087	Class with Virtual Method without a Virtual Destructor	A class contains a virtual method, but the method does not have an associated virtual destructor.
CWE-1090	Method Containing Access of a Member Element from Another Class	A method for a class performs an operation that directly accesses a member element from another class.
CWE-1095	Loop Condition Value Update within the Loop	The software uses a loop with a control flow condition based on a value that is updated within the body of the loop.
CWE-1121	Excessive McCabe Cyclomatic Complexity	A module, function, method, procedure, etc. contains McCabe cyclomatic complexity that exceeds a desirable maximum. (default threshold for Cyclomatic Complexity is 20, <i>alternate threshold can be set prior to analysis</i>).

6.5 Automated Source Code Performance Efficiency Measure Element Descriptions

The quality measure elements (weaknesses violating software quality rules) that compose the CISQ Automated Source Code Performance Efficiency Measure are presented in Table 2. This measure contains 16 parent weaknesses and 3 contributing weaknesses (children in the CWE) that represent variants of these weaknesses. The CWE numbers for contributing weaknesses are presented in lighter gray cells immediately below the parent weakness whose CWE number is in a darker gray cell. Performance Efficiency contains 19 Quality Measure Elements.

ISO/IEC 5055:2021(E)

Table 2 — Quality Measure Elements for Automated Source Code Performance Efficiency Measure

CWE #	Descriptor	Weakness Description
CWE-404	Improper Resource Shutdown or Release	The program does not release or incorrectly releases a resource before it is made available for re-use.
CWE-401	Improper Release of Memory Before Removing Last Reference ('Memory Leak')	The software does not sufficiently track and release allocated memory after it has been used, which slowly consumes remaining memory.
CWE-772	Missing Release of Resource after Effective Lifetime	The software does not release a resource after its effective lifetime has ended, i.e., after the resource is no longer needed.
CWE-775	Missing Release of File Descriptor or Handle after Effective Lifetime	The software does not release a file descriptor or handle after its effective lifetime has ended, i.e., after the file descriptor/handle is no longer needed. When a file descriptor or handle is not released after use (typically by explicitly closing it), attackers can cause a denial of service by consuming all available file descriptors/handles, or otherwise preventing other system processes from obtaining their own file descriptors/handles.
CWE-424	Improper Protection of Alternate Path	The product does not sufficiently protect all possible paths that a user can take to access restricted functionality or resources. When data storage relies on a DBMS, special care shall be given to secure all data accesses and ensure data integrity.
CWE-1042	Static Member Data Element outside of a Singleton Class Element	The code contains a member element that is declared as static (but not final), in which its parent class element is not a singleton class - that is, a class element that can be used only once in the 'to' association of a Create action.
CWE-1043	Data Element Aggregating an Excessively Large Number of Non-Primitive Elements	The software uses a data element that has an excessively large number of sub-elements with non-primitive data types such as structures or aggregated objects. (default threshold for the maximum number of aggregated non-primitive data types is 5, <i>alternate threshold can be set prior to analysis</i>).
CWE-1046	Creation of Immutable Text Using String Concatenation	This programming pattern can be inefficient in comparison with use of text buffer data elements. This issue can make the software perform more slowly. If the relevant code is reachable by an attacker, then this performance problem might introduce a vulnerability.

CWE #	Descriptor	Weakness Description
CWE-1049	Excessive Data Query Operations in a Large Data Table	The software performs a data query with many joins and sub-queries on a large data table. (default thresholds are 5 joins, 3 sub-queries, and 1,000,000 rows for a large table, <i>alternate thresholds for all three parameters can be set prior to analysis</i>).
CWE-1050	Excessive Platform Resource Consumption within a Loop	The software has a loop body or loop condition that contains a control element that directly or indirectly consumes platform resources, e.g. messaging, sessions, locks, or file descriptors. (default threshold for resource consumption should be set based on the system architecture <i>prior to analysis</i>).
CWE-1057	Data Access Operations Outside of Expected Data Manager Component	The software uses a dedicated, central data manager component as required by design, but it contains code that performs data-access operations that do not use this data manager. Notes: <ul style="list-style-type: none"> · The dedicated data access component can be either client-side or server-side, which means that data access components can be developed using non-SQL language. · If there is no dedicated data access component, every data access is a weakness. · For some embedded software that requires access to data from anywhere, the whole software is defined as a data access component. This condition must be identified as input to the analysis.
CWE-1060	Excessive Number of Inefficient Server-Side Data Accesses	The software performs too many data queries without using efficient data processing functionality such as stored procedures. (default threshold for maximum number of data queries is 5 , <i>alternate threshold can be set prior to analysis</i>).
CWE-1067	Excessive Execution of Sequential Searches of Data Resource	The software contains a data query against a SQL table or view that is configured in a way that does not utilize an index and may cause sequential searches to be performed. (default threshold for a weakness to be counted is a query on a table of at least 500 rows, or an alternate threshold recommended by the database vendor. No weakness should be counted under conditions where the vendor recommends an index should not be used. An <i>alternate threshold can be set prior to analysis</i>).

ISO/IEC 5055:2021(E)

CWE #	Descriptor	Weakness Description
CWE-1072	Data Resource Access without Use of Connection Pooling	The software accesses a data resource through a database without using a connection pooling capability. (the use of a connection pool is technology dependent; for example, connection pooling is disabled with the addition of 'Pooling=false' to the connection string with ADO.NET or the value of a 'com.sun.jndi.ldap.connect.pool' environment parameter in Java).
CWE-1073	Non-SQL Invokable Control Element with Excessive Number of Data Resource Accesses	The software contains a client with a function or method that contains many data accesses/queries that are sent through a data manager, i.e., does not use efficient database capabilities. (default threshold for the maximum number of data queries is 2, <i>alternate threshold can be set prior to analysis</i>).
CWE-1089	Large Data Table with Excessive Number of Indices	The software uses a large data table (default is 1,000,000 rows; <i>alternate threshold can be set prior to analysis</i>) that contains an excessively large number of indices. (default threshold for the maximum number of indices is 3, <i>alternate threshold can be set prior to analysis</i>).
CWE-1091	Use of Object without Invoking Destructor Method	The software contains a method that accesses an object but does not later invoke the element's associated finalize/destructor method.
CWE-1094	Excessive Index Range Scan for a Data Resource	The software contains an index range scan for a large data table, (default threshold is 1,000,000 rows, <i>alternate threshold can be set prior to analysis</i>) but the scan can cover many rows. (default threshold for the index range is 10, <i>alternate threshold can be set prior to analysis</i>).

6.6 Automated Source Code Reliability Measure Element Descriptions

The quality measure elements (weaknesses violating software quality rules) that compose the CISQ Automated Source Code Reliability Measure are presented in Table 3. This measure contains 35 parent weaknesses and 39 contributing weaknesses (children in the CWE) that represent variants of these weaknesses. The CWE numbers for contributing weaknesses are presented in lighter gray cells immediately below the parent weakness whose CWE number is in a darker gray cell. Reliability contains 74 Quality Measure Elements.

Table 3 — Quality Measure Elements for Automated Source Code Reliability Measure

CWE #	Descriptor	Weakness description
CWE-119	Improper Restriction of Operations within the Bounds of a Memory Buffer	The software performs operations on a memory buffer, but it can read from or write to a memory location that is outside of the intended boundary of the buffer.
CWE-120	Buffer Copy without Checking Size of Input ('Classic Buffer Overflow')	The program copies an input buffer to an output buffer without verifying that the size of the input buffer is less than the size of the output buffer, leading to a buffer overflow.
CWE-123	Write-what-where condition	Any condition where the attacker can write an arbitrary value to be written to an arbitrary location, often as the result of a buffer overflow.
CWE-125	Out-of-bounds read	The software reads data past the end, or before the beginning, of the intended buffer.
CWE-130	Improper Handling of Length Parameter Inconsistency	The software parses a formatted message or structure, but it does not handle or incorrectly handles a length field that is inconsistent with the actual length of the associated data.
CWE-786	Access of Memory Location Before Start of Buffer	The software reads or writes to a buffer using an index or pointer that references a memory location prior to the beginning of the buffer. This typically occurs when a pointer or its index is decremented to a position before the buffer, when pointer arithmetic results in a position before the beginning of the valid memory location, or when a negative index is used.
CWE-787	Out-of-bounds Write	The software writes data past the end, or before the beginning, of the intended buffer. The software may modify an index or perform pointer arithmetic that references a memory location that is outside of the boundaries of the buffer.

ISO/IEC 5055:2021(E)

CWE #	Descriptor	Weakness description
CWE-788	Access of Memory Location After End of Buffer	The software reads or writes to a buffer using an index or pointer that references a memory location after the end of the buffer. This typically occurs when a pointer or its index is decremented to a position before the buffer; when pointer arithmetic results in a position before the buffer; or when a negative index is used, which generates a position before the buffer.
CWE-805	Buffer Access with Incorrect Length Value	The software uses a sequential operation to read or write a buffer, but it uses an incorrect length value that causes it to access memory that is outside of the bounds of the buffer.
CWE-822	Untrusted Dereference Pointer	The program obtains a value from an untrusted source, converts this value to a pointer, and dereferences the resulting pointer. There are several variants of this weakness, including but not necessarily limited to: ☐ The untrusted value is directly invoked as a function call. ☐☐☐In OS kernels or drivers where there is a boundary between "userland" and privileged memory spaces, an untrusted pointer might enter through an API or system call (see CWE-781 for one such example). ☐☐☐Inadvertently accepting the value from an untrusted control sphere when it did not have to be accepted as input at all. This might occur when the code was originally developed to be run by a single user in a non-networked environment, and the code is then ported to or otherwise exposed to a networked environment.
CWE-823	Use of Out-of-range Pointer Offset	The program performs pointer arithmetic on a valid pointer, but it uses an offset that can point outside of the intended range of valid memory locations for the resulting pointer. ☐ While a pointer can contain a reference to any arbitrary memory location, a program typically only intends to use the pointer to access limited portions of memory, such as contiguous memory used to access an individual array. ☐ Programs may use offsets to access fields or sub-elements stored within structured data. The offset might be out-of-range if it comes from an untrusted source, is the result of an incorrect calculation, or occurs because of another error.
CWE-824	Access of Uninitialized Pointer	The program accesses or uses a pointer that has not been initialized. If the pointer contains an uninitialized value, then the value might not point to a valid memory location.
CWE-825	Expired Dereference Pointer	The program dereferences a pointer that contains a location for memory that was previously valid, but is no longer valid.
CWE-170	Improper Null Termination	The software does not terminate or incorrectly terminates a string or array with a null character or equivalent terminator.

CWE #	Descriptor	Weakness description
CWE-252	Unchecked Return Value	The software does not check the return value from a method or function, which can prevent it from detecting unexpected states and conditions.
CWE-390	Detection of Error Condition Without Action	The software detects a specific error, but takes no actions to handle the error. For instance, where an exception handling block (such as Catch and Finally blocks) do not contain any instruction, making it impossible to accurately identify and adequately respond to unusual and unexpected conditions.
CWE-394	Unexpected Status Code or Return Value	The software does not properly check when a function or operation returns a value that is legitimate for the function, but is not expected by the software.
CWE-404	Improper Resource Shutdown or Release	The program does not release or incorrectly releases a resource before it is made available for re-use.
CWE-401	Improper Release of Memory Before Removing Last Reference ('Memory Leak')	The software does not sufficiently track and release allocated memory after it has been used, which slowly consumes remaining memory.
CWE-772	Missing Release of Resource after Effective Lifetime	The software does not release a resource after its effective lifetime has ended, i.e., after the resource is no longer needed.
CWE-775	Missing Release of File Descriptor or Handle after Effective Lifetime	The software does not release a file descriptor or handle after its effective lifetime has ended, i.e., after the file descriptor/handle is no longer needed. When a file descriptor or handle is not released after use (typically by explicitly closing it), attackers can cause a denial of service by consuming all available file descriptors/handles, or otherwise preventing other system processes from obtaining their own file descriptors/handles.
CWE-424	Improper Protection of Alternate Path	The product does not sufficiently protect all possible paths that a user can take to access restricted functionality or resources. When data storage relies on a DBMS, special care shall be given to secure all data accesses and ensure data integrity.
CWE-459	Incomplete Clean-up	The software does not properly "clean up" and remove temporary or supporting resources after they have been used.
CWE-476	NULL Pointer Dereference	A NULL pointer dereference occurs when the application dereferences a pointer that it expects to be valid, but is NULL, typically causing a crash or exit.

ISO/IEC 5055:2021(E)

CWE #	Descriptor	Weakness description
CWE-480	Use of Incorrect Operator	The programmer accidentally uses the wrong operator, which changes the application logic in security-relevant ways.
CWE-484	Omitted Break Statement in Switch	The program omits a break statement within a switch or similar construct, causing code associated with multiple conditions to execute. This can cause problems when the programmer only intended to execute code associated with one condition.
CWE-562	Return of Stack Variable Address	A function returns the address of a stack variable, which will cause unintended program behavior, typically in the form of a crash. Because local variables are allocated on the stack, when a program returns a pointer to a local variable, it is returning a stack address. A subsequent function call is likely to re-use this same stack address, thereby overwriting the value of the pointer, which no longer corresponds to the same variable since a function's stack frame is invalidated when it returns. At best this will cause the value of the pointer to change unexpectedly. In many cases it causes the program to crash the next time the pointer is dereferenced.
CWE-595	Comparison of Object References Instead of Object Contents	The program compares object references instead of the contents of the objects themselves, preventing it from detecting equivalent objects.
CWE-597	Use of Wrong Operator in String Comparison	The software uses the wrong operator when comparing a string, such as using "==" when the equals() method should be used instead. In Java, using == or != to compare two strings for equality compares two objects for equality, not their values.
CWE-1097	Persistent Storable Data Element without Associated Comparison Control Element	The software uses a storable data element that does not have all the associated functions or methods that are necessary to support comparison. Remove instances where the persistent data has missing or improper dedicated comparison operations. Note: * In case of technologies with classes, this means situations where a persistent field is from a class that is made persistent while it does not implement methods from the list of required comparison operations (a JAVA example is the list composed of {'hashCode()','equals()'} methods)
CWE-662	Improper Synchronization	The software attempts to use a shared resource in an exclusive manner, but does not prevent or incorrectly prevents use of the resource by another thread or process.
CWE-366	Race Condition within a Thread	If two threads of execution use a resource simultaneously, there exists the possibility that resources may be used while invalid, in turn making the state of execution undefined.

CWE #	Descriptor	Weakness description
CWE-543	Use of Singleton Pattern Without Synchronization in a Multithreaded Context	The software uses the singleton pattern when creating a resource within a multithreaded environment.
CWE-567	Unsynchronized Access to Shared Data in a Multithreaded Context	The product does not properly synchronize shared data, such as static variables across threads, which can lead to undefined behavior and unpredictable data changes.
CWE-667	Improper Locking	The software does not properly acquire a lock on a resource, or it does not properly release a lock on a resource, leading to unexpected resource state changes and behaviors.
CWE-764	Multiple Locks of a Critical Resource	The software locks a critical resource more times than intended, leading to an unexpected state in the system.
CWE-820	Missing Synchronization	The software utilizes a shared resource in a concurrent manner but does not attempt to synchronize access to the resource.
CWE-821	Incorrect Synchronization	The software utilizes a shared resource in a concurrent manner, but it does not correctly synchronize access to the resource.
CWE-1058	Invokable Control Element in Multi-Thread Context with non-Final Static Storable or Member Element	The code contains a function or method that operates in a multi-threaded environment but owns an unsafe non-final static storable or member data element.
CWE-1096	Singleton Class Instance Creation without Proper Locking or Synchronization	The software implements a Singleton design pattern but does not use appropriate locking or other synchronization mechanism to ensure that the singleton class is only instantiated once.
CWE-665	Improper Initialization	The software does not initialize or incorrectly initializes a resource, which might leave the resource in an unexpected state when it is accessed or used.
CWE-456	Missing Initialization of a Variable	The software does not initialize critical variables, which causes the execution environment to use unexpected values.
CWE-457	Use of uninitialized variable	The code uses a variable that has not been initialized, leading to unpredictable or unintended results.
CWE-672	Operation on a Resource after Expiration or Release	The software uses, accesses, or otherwise operates on a resource after that resource has been expired, released, or revoked.

ISO/IEC 5055:2021(E)

CWE #	Descriptor	Weakness description
CWE-415	Double Free	The product calls free() twice on the same memory address, potentially leading to modification of unexpected memory locations.
CWE-416	Use After Free	Referencing memory after it has been freed can cause a program to crash, use unexpected values, or execute code.
CWE-681	Incorrect Conversion between Numeric Types	When converting from one data type to another, such as long to integer, data can be omitted or translated in a way that produces unexpected values. If the resulting values are used in a sensitive context, then dangerous behaviors may occur. For instance, if the software declares a variable, field, member, etc. with a numeric type, and then updates it with a value from a second numeric type that is incompatible with the first numeric type.
CWE-194	Unexpected Sign Extension	The software performs an operation on a number that causes it to be sign-extended when it is transformed into a larger data type. When the original number is negative, this can produce unexpected values that lead to resultant weaknesses.
CWE-195	Signed to Unsigned Conversion Error	The software uses a signed primitive and performs a cast to an unsigned primitive, which can produce an unexpected value if the value of the signed primitive cannot be represented using an unsigned primitive.
CWE-196	Unsigned to Signed Conversion Error	The software uses an unsigned primitive and performs a cast to a signed primitive, which can produce an unexpected value if the value of the unsigned primitive cannot be represented using a signed primitive.
CWE-197	Numeric Truncation Error	Truncation errors occur when a primitive is cast to a primitive of a smaller size and data is lost in the conversion. When a primitive is cast to a smaller primitive, the high order bits of the large value are lost in the conversion, potentially resulting in an unexpected value that is not equal to the original value. This value may be required as an index into a buffer, a loop iterator, or simply necessary state data. In any case, the value cannot be trusted and the system will be in an undefined state. While this method may be employed viably to isolate the low bits of a value, this usage is rare, and truncation usually implies that an implementation error has occurred.
CWE-682	Incorrect Calculation	The software performs a calculation that generates incorrect or unintended results that are later used in security-critical decisions or resource management.
CWE-131	Incorrect Calculation of Buffer Size	The software does not correctly calculate the size to be used when allocating a buffer, which could lead to a buffer overflow.

CWE #	Descriptor	Weakness description
CWE-369	Divide by Zero	The product divides a value by zero.
CWE-703	Improper Check or Handling of Exceptional Conditions	The software does not properly anticipate or handle exceptional conditions that rarely occur during normal operation of the software.
CWE-248	Uncaught Exception	An exception is thrown from a function, but it is not caught.
CWE-391	Unchecked Error Condition	Ignoring exceptions and other error conditions may allow an attacker to induce unexpected behavior unnoticed.
CWE-392	Missing Report of Error Condition	The software encounters an error but does not provide a status code or return value to indicate that an error has occurred.
CWE-704	Incorrect Type Conversion or Cast	The software does not correctly convert an object, resource, or structure from one type to a different type.
CWE-758	Reliance on Undefined, Unspecified, or Implementation-Defined Behavior	The software uses an API function, data structure, or other entity in a way that relies on properties that are not always guaranteed to hold for that entity.
CWE-833	Deadlock	The software contains multiple threads or executable segments that are waiting for each other to release a necessary lock, resulting in deadlock.
CWE-835	Loop with Unreachable Exit Condition ('Infinite Loop')	The program contains an iteration or loop with an exit condition that cannot be reached, i.e., an infinite loop.
CWE-908	Use of Uninitialized Resource	The software uses a resource that has not been properly initialized.
CWE-1045	Parent Class with a Virtual Destructor and a Child Class without a Virtual Destructor	A parent class has a virtual destructor method, but the parent has a child class that does not have a virtual destructor.
CWE-1051	Initialization with Hard-Coded Network Resource Configuration Data	The software initializes data using hard-coded values that act as network resource identifiers.
CWE-1066	Missing Serialization Control Element	The software contains a serializable data element that does not have an associated serialization method.
CWE-1070	Serializable Data Element Containing Non-Serializable Item Elements	The software contains a serializable, storable data element such as a field or member, but the data element contains member elements that are not serializable.

ISO/IEC 5055:2021(E)

CWE #	Descriptor	Weakness description
CWE-1077	Floating Point Comparison with Incorrect Operator	The code performs a comparison such as an equality test between two float (floating point) values, but it uses comparison operators that do not account for the possibility of loss of precision. Numeric calculation using floating point values can generate imprecise results because of rounding errors. As a result, two different calculations might generate numbers that are mathematically equal, but have slightly different bit representations that do not translate to the same mathematically equal values. As a result, an equality test or other comparison might produce unexpected results. (an example in JAVA, is the use of '= =' or '! =') instead of being checked for precision.
CWE-1079	Parent Class without Virtual Destructor Method	A parent class contains one or more child classes, but the parent class does not have a virtual destructor method.
CWE-1082	Class Instance Self Destruction Control Element	The code contains a class instance that calls the method or function to delete or destroy itself. (an example of a self-destruction in C++ is 'delete this')
CWE-1083	Data Access from Outside Designated Data Manager Component	The software is intended to manage data access through a particular data manager component such as a relational or non-SQL database, but it contains code that performs data access operations without using that component. Notes: 1) The dedicated data access component can be either client-side or server-side, which means that data access components can be developed using non-SQL language. 2) If there is no dedicated data access component, every data access is a violation. 3) For some embedded software that requires access to data from anywhere, the whole software is defined as a data access component. This condition must be identified as input to the analysis.
CWE-1087	Class with Virtual Method without a Virtual Destructor	A class contains a virtual method, but the method does not have an associated virtual destructor.
CWE-1088	Synchronous Access of Remote Resource without Timeout	The code has a synchronous call to a remote resource, but there is no timeout for the call, or the timeout is set to infinite.
CWE-1098	Data Element containing Pointer Item without Proper Copy Control Element	The code contains a data element with a pointer that does not have an associated copy or constructor method.

6.7 Automated Source Code Security Measure Element Descriptions

The quality measure elements (weaknesses violating software quality rules) that compose the CISQ Automated Source Code Security Measure are presented in Table 4. This measure contains 36 parent weaknesses and 37 contributing weaknesses (children in the CWE) that represent variants of these weaknesses. The CWE numbers for contributing weaknesses are presented in lighter gray cells immediately below the parent weakness whose CWE number is in a darker gray cell. Security contains 73 Quality Measure Elements.

Table 4 — Quality Measure Elements for Automated Source Code Security Measure

CWE #	Descriptor	Weakness description
CWE-22	Improper Limitation of a Pathname to a Restricted Directory ('Path Traversal')	The software uses external input to construct a pathname that is intended to identify a file or directory that is located underneath a restricted parent directory, but the software does not properly neutralize special elements within the pathname that can cause the pathname to resolve to a location that is outside of the restricted directory.
CWE-23	Relative Path Traversal	The software uses external input to construct a pathname that should be within a restricted directory, but it does not properly neutralize sequences such as ".." that can resolve to a location that is outside of that directory.
CWE-36	Absolute Path Traversal	The software uses external input to construct a pathname that should be within a restricted directory, but it does not properly neutralize absolute path sequences such as "/abs/path" that can resolve to a location that is outside of that directory.
CWE-77	Improper Neutralization of Special Elements used in a Command ('Command Injection')	The software constructs all or part of a command using externally-influenced input from an upstream component, but it does not neutralize or incorrectly neutralizes special elements that could modify the intended command when it is sent to a downstream component.
CWE-78	Improper Neutralization of Special Elements used in an OS Command ('OS Command Injection')	The software constructs all or part of an OS command using externally-influenced input from an upstream component, but it does not neutralize or incorrectly neutralizes special elements that could modify the intended OS command when it is sent to a downstream component.
CWE-88	Argument Injection or Modification	The software does not sufficiently delimit the arguments being passed to a component in another control sphere, allowing alternate arguments to be provided, leading to potentially security-relevant changes.

ISO/IEC 5055:2021(E)

CWE #	Descriptor	Weakness description
CWE-79	Improper Neutralization of Input During Web Page Generation ('Cross-site Scripting')	<p>The software does not neutralize or incorrectly neutralizes user-controllable input before it is placed in output that is used as a web page that is served to other users.</p> <p>Cross-site scripting (XSS) vulnerabilities occur when:</p> <ol style="list-style-type: none"> 1. Untrusted data enters a web application, typically from a web request. 2. The web application dynamically generates a web page that contains this untrusted data. 3. During page generation, the application does not prevent the data from containing content that is executable by a web browser, such as JavaScript, HTML tags, HTML attributes, mouse events, Flash, ActiveX, etc. 4. A victim visits the generated web page through a web browser, which contains malicious script that was injected using the untrusted data. 5. Since the script comes from a web page that was sent by the web server, the victim's web browser executes the malicious script in the context of the web server's domain. 6. This effectively violates the intention of the web browser's same-origin policy, which states that scripts in one domain should not be able to access resources or run code in a different domain.
CWE-89	Improper Neutralization of Special Elements used in an SQL Command ('SQL Injection')	The software constructs all or part of an SQL command using externally-influenced input from an upstream component, but it does not neutralize or incorrectly neutralizes special elements that could modify the intended SQL command when it is sent to a downstream component.
CWE-564	SQL Injection: Hibernate	Using Hibernate to execute a dynamic SQL statement built with user-controlled input can allow an attacker to modify the statement's meaning or to execute arbitrary SQL commands.
CWE-90	Improper Neutralization of Special Elements used in an LDAP Query ('LDAP Injection')	The software constructs all or part of an LDAP query using externally-influenced input from an upstream component, but it does not neutralize or incorrectly neutralizes special elements that could modify the intended LDAP query when it is sent to a downstream component.

CWE #	Descriptor	Weakness description
CWE-91	XML Injection (aka Blind XPath Injection)	The software does not properly neutralize special elements that are used in XML, allowing attackers to modify the syntax, content, or commands of the XML before it is processed by an end system.
CWE-99	Improper Control of Resource Identifiers ('Resource injection')	The software receives input from an upstream component, but it does not restrict or incorrectly restricts the input before it is used as an identifier for a resource that may be outside the intended sphere of control.
CWE-119	Improper Restriction of Operations within the Bounds of a Memory Buffer	The software performs operations on a memory buffer, but it can read from or write to a memory location that is outside of the intended boundary of the buffer.
CWE-120	Buffer Copy without Checking Size of Input ('Classic Buffer Overflow')	The program copies an input buffer to an output buffer without verifying that the size of the input buffer is less than the size of the output buffer, leading to a buffer overflow.
CWE-123	Write-what-where condition	Any condition where the attacker can write an arbitrary value to an arbitrary location, often as the result of a buffer overflow.
CWE-125	Out-of-bounds Read	The software reads data past the end, or before the beginning, of the intended buffer.
CWE-130	Improper Handling of Length Parameter Inconsistency	The software parses a formatted message or structure, but it does not handle or incorrectly handles a length field that is inconsistent with the actual length of the associated data.
CWE-786	Access of Memory Location Before Start of Buffer	The software reads or writes to a buffer using an index or pointer that references a memory location prior to the beginning of the buffer. This typically occurs when a pointer or its index is decremented to a position before the buffer, when pointer arithmetic results in a position before the beginning of the valid memory location, or when a negative index is used.
CWE-787	Out-of-bounds Write	The software writes data past the end, or before the beginning, of the intended buffer. The software may modify an index or perform pointer arithmetic that references a memory location that is outside of the boundaries of the buffer.

ISO/IEC 5055:2021(E)

CWE #	Descriptor	Weakness description
CWE-788	Access of Memory Location After End of Buffer	The software reads or writes to a buffer using an index or pointer that references a memory location after the end of the buffer. This typically occurs when a pointer or its index is decremented to a position before the buffer; when pointer arithmetic results in a position before the buffer; or when a negative index is used, which generates a position before the buffer.
CWE-805	Buffer Access with Incorrect Length Value	The software uses a sequential operation to read or write a buffer, but it uses an incorrect length value that causes it to access memory that is outside of the bounds of the buffer.
CWE-822	Untrusted Pointer Dereference	The program obtains a value from an untrusted source, converts this value to a pointer, and dereferences the resulting pointer. There are several variants of this weakness, including but not necessarily limited to: ☐ The untrusted value is directly invoked as a function call. ☐☐☐ In OS kernels or drivers where there is a boundary between "userland" and privileged memory spaces, an untrusted pointer might enter through an API or system call (see CWE-781 for one such example). ☐ Inadvertently accepting the value from an untrusted control sphere when it did not have to be accepted as input at all. This might occur when the code was originally developed to be run by a single user in a non-networked environment, and the code is then ported to or otherwise exposed to a networked environment.
CWE-823	Use of Out-of-range Pointer Offset	The program performs pointer arithmetic on a valid pointer, but it uses an offset that can point outside of the intended range of valid memory locations for the resulting pointer. ☐ While a pointer can contain a reference to any arbitrary memory location, a program typically only intends to use the pointer to access limited portions of memory, such as contiguous memory used to access an individual array. ☐ Programs may use offsets to access fields or sub-elements stored within structured data. The offset might be out-of-range if it comes from an untrusted source, is the result of an incorrect calculation, or occurs because of another error.
CWE-824	Access of Uninitialized Pointer	The program accesses or uses a pointer that has not been initialized. If the pointer contains an uninitialized value, then the value might not point to a valid memory location.
CWE-825	Expired Pointer Dereference	The program dereferences a pointer that contains a location for memory that was previously valid, but is no longer valid.

CWE #	Descriptor	Weakness description
CWE-129	Improper Validation of Array Index	The product uses untrusted input when calculating or using an array index, but the product does not validate or incorrectly validates the index to ensure the index references a valid position within the array.
CWE-134	Use of Externally Controlled Format String	The software uses a function that accepts a format string as an argument, but the format string originates from an external source.
CWE-252	Unchecked Return Value	The software does not check the return value from a method or function, which can prevent it from detecting unexpected states and conditions.
CWE-404	Improper Resource Shutdown or Release	The program does not release or incorrectly releases a resource before it is made available for re-use.
CWE-401	Improper Release of Memory Before Removing Last Reference ('Memory Leak')	The software does not sufficiently track and release allocated memory after it has been used, which slowly consumes remaining memory.
CWE-772	Missing Release of Resource after Effective Lifetime	The software does not release a resource after its effective lifetime has ended, i.e., after the resource is no longer needed.
CWE-775	Missing Release of File Descriptor or Handle after Effective Lifetime	The software does not release a file descriptor or handle after its effective lifetime has ended, i.e., after the file descriptor/handle is no longer needed. When a file descriptor or handle is not released after use (typically by explicitly closing it), attackers can cause a denial of service by consuming all available file descriptors/handles, or otherwise preventing other system processes from obtaining their own file descriptors/handles.
CWE-424	Improper Protection of Alternate Path	The product does not sufficiently protect all possible paths that a user can take to access restricted functionality or resources. When data storage relies on a DBMS, special care shall be given to secure all data accesses and ensure data integrity.
CWE-434	Unrestricted Upload of File with Dangerous Type	The software allows the upload or transfer files of dangerous types that can be automatically processed within the product's environment.
CWE-477	Use of Obsolete Function	The code uses deprecated or obsolete functions, which suggests that the code has not been actively reviewed or maintained.

ISO/IEC 5055:2021(E)

CWE #	Descriptor	Weakness description
CWE-480	Use of Incorrect Operator	The programmer accidentally uses the wrong operator, which changes the application logic in security-relevant ways.
CWE-502	Deserialization of Untrusted Data	The application deserializes untrusted data without sufficiently verifying that the resulting data will be valid.
CWE-570	Expression is Always False	The software contains an expression that will always evaluate to false.
CWE-571	Expression Is Always True	The software contains an expression that will always evaluate to true.
CWE-606	Unchecked Input for Loop Condition	The product does not properly check inputs that are used for loop conditions, potentially leading to a denial of service because of excessive looping.
CWE-611	Improper Restriction of XML External Entity Reference ('XXE')	The software processes an XML document that can contain XML entities with URIs that resolve to documents outside of the intended sphere of control, causing the product to embed incorrect documents into its output.
CWE-643	Improper Neutralization of Data within XPath Expressions ('XPath Injection')	The software uses external input to dynamically construct an XPath expression used to retrieve data from an XML database, but it does not neutralize or incorrectly neutralizes that input. This allows an attacker to control the structure of the query.
CWE-652	CWE-652 Improper Neutralization of Data within XQuery Expressions ('XQuery Injection')	The software uses external input to dynamically construct a XQuery expression used to retrieve data from an XML database, but it does not neutralize or incorrectly neutralizes that input. This allows an attacker to control the structure of the query.
CWE-665	Improper Initialization	The software does not initialize or incorrectly initializes a resource, which might leave the resource in an unexpected state when it is accessed or used.
CWE-456	Missing Initialization of a Variable	The software does not initialize critical variables, which causes the execution environment to use unexpected values.
CWE-457	Use of uninitialized variable	The software uses a variable that has not been initialized leading to unpredictable or unintended results.
CWE-662	Improper Synchronization	The software attempts to use a shared resource in an exclusive manner, but does not prevent or incorrectly prevents use of the resource by another thread or process.

CWE #	Descriptor	Weakness description
CWE-366	Race Condition within a Thread	If two threads of execution use a resource simultaneously, there exists the possibility that resources may be used while invalid, in turn making the state of execution undefined.
CWE-543	Use of Singleton Pattern Without Synchronization in a Multithreaded Context	The software uses the singleton pattern when creating a resource within a multithreaded environment.
CWE-567	Unsynchronized Access to Shared Data in a Multithreaded Context	The product does not properly synchronize shared data, such as static variables across threads, which can lead to undefined behavior and unpredictable data changes.
CWE-667	Improper Locking	The software does not properly acquire a lock on a resource, or it does not properly release a lock on a resource, leading to unexpected resource state changes and behaviors.
CWE-820	Missing Synchronization	The software utilizes a shared resource in a concurrent manner but does not attempt to synchronize access to the resource.
CWE-821	Incorrect Synchronization	The software utilizes a shared resource in a concurrent manner, but it does not correctly synchronize access to the resource.
CWE-672	Operation on a Resource after Expiration or Release	The software uses, accesses, or otherwise operates on a resource after that resource has been expired, released, or revoked.
CWE-415	Double Free	The product calls free() twice on the same memory address, potentially leading to modification of unexpected memory locations.
CWE-416	Use After Free	Referencing memory after it has been freed can cause a program to crash, use unexpected values, or execute code.
CWE-681	Incorrect Conversion between Numeric Types	When converting from one data type to another, such as long to integer, data can be omitted or translated in a way that produces unexpected values. If the resulting values are used in a sensitive context, then dangerous behaviors may occur. For instance, if the software declares a variable, field, member, etc. with a numeric type, and then updates it with a value from a second numeric type that is incompatible with the first numeric type.

ISO/IEC 5055:2021(E)

CWE #	Descriptor	Weakness description
CWE-194	Unexpected Sign Extension	The software performs an operation on a number that causes it to be sign-extended when it is transformed into a larger data type. When the original number is negative, this can produce unexpected values that lead to resultant weaknesses.
CWE-195	Signed to Unsigned Conversion Error	The software uses a signed primitive and performs a cast to an unsigned primitive, which can produce an unexpected value if the value of the signed primitive cannot be represented using an unsigned primitive.
CWE-196	Unsigned to Signed Conversion Error	The software uses an unsigned primitive and performs a cast to a signed primitive, which can produce an unexpected value if the value of the unsigned primitive cannot be represented using a signed primitive.
CWE-197	Numeric Truncation Error	Truncation errors occur when a primitive is cast to a primitive of a smaller size and data is lost in the conversion. When a primitive is cast to a smaller primitive, the high order bits of the large value are lost in the conversion, potentially resulting in an unexpected value that is not equal to the original value. This value may be required as an index into a buffer, a loop iterator, or simply necessary state data. In any case, the value cannot be trusted and the system will be in an undefined state. While this method may be employed viably to isolate the low bits of a value, this usage is rare, and truncation usually implies that an implementation error has occurred.
CWE-682	Incorrect Calculation	The software performs a calculation that generates incorrect or unintended results that are later used in security-critical decisions or resource management.
CWE-131	Incorrect Calculation of Buffer Size	The software does not correctly calculate the size to be used when allocating a buffer, which could lead to a buffer overflow.
CWE-369	Divide by Zero	The product divides a value by zero.
CWE-732	Incorrect Permission Assignment for Critical Resource	The software specifies permissions for a security-critical resource in a way that allows that resource to be read or modified by unintended actors.
CWE-778	Insufficient Logging	When a security-critical event occurs, the software either does not record the event or omits important details about the event when logging it.

CWE #	Descriptor	Weakness description
CWE-783	Operator Precedence Logic Error	The program uses an expression in which operator precedence causes incorrect logic to be used. While often just a bug, operator precedence logic errors can have serious consequences if they are used in security-critical code, such as making an authentication decision.
CWE-789	Uncontrolled Memory Allocation	The product allocates memory based on an untrusted size value, but it does not validate or incorrectly validates the size, allowing arbitrary amounts of memory to be allocated.
CWE-798	Use of Hard-coded Credentials	The software contains hard-coded credentials, such as a password or cryptographic key, which it uses for its own inbound authentication, outbound communication to external components, or encryption of internal data.
CWE-259	Use of Hard-coded Password	The software contains a hard-coded password, which it uses for its own inbound authentication or for outbound communication to external components.
CWE-321	Use of Hard-coded Cryptographic Key	The use of a hard-coded cryptographic key significantly increases the possibility that encrypted data may be recovered.
CWE-835	Loop with Unreachable Exit Condition ('Infinite Loop')	The program contains an iteration or loop with an exit condition that cannot be reached, i.e., an infinite loop.
CWE-917	Improper Neutralization of Special Elements used in an Expression Language Statement ('Expression Language Injection')	The software constructs all or part of an expression language (EL) statement in a Java Server Page (JSP) using externally-influenced input from an upstream component, but it does not neutralize or incorrectly neutralizes special elements that could modify the intended EL statement before it is executed.
CWE-1057	Data Access Operations Outside of Expected Data Manager Component	The software uses a dedicated, central data manager component as required by design, but it contains code that performs data-access operations that do not use this data manager. Notes: ☐☐☐The dedicated data access component can be either client-side or server-side, which means that data access components can be developed using non-SQL language. ☐☐☐If there is no dedicated data access component, every data access is a weakness. ☐☐☐For some embedded software that requires access to data from anywhere, the whole software is defined as a data access component. This condition must be identified as input to the analysis.

ISO/IEC 5055:2021(E)

6.8 Introduction to the Specification of Quality Measure Elements

Clauses 7, 8, and 9 display in human readable format the content of the machine readable XMI format file attached to this specification. The content of the machine readable XMI format file represents the Quality Measure Elements with the following conventions:

- Structural elements included in a weakness pattern are represented in the Knowledge Discovery Metamodel (KDM).
- Relations among the structural elements constituting a weakness pattern are represented in the Software Patterns Metamodel Standard (SPMS) to compute measures at the weakness level.

6.9 Knowledge Discovery Metamodel (KDM)

This specification uses the Knowledge Discovery Metamodel (KDM) to represent the parsed entities whose relationships create a weakness pattern. This specification uses KDM entities in the 'KDM outline' section of the pattern definitions to represent the code elements whose presence or absence indicates an occurrence of the weakness. Descriptions try to remain as generic, yet as accurate as possible, so that the pattern can be applied to as many situations as possible: different technologies, different programming languages, etc. This means:

1. The descriptions include information such as (MethodUnit), (Reads), (ManagesResource), ... to identify the KDM entities included in the pattern definition.
2. The descriptions only describe the salient aspects of the pattern since the specifics can be technology or language dependent.

Detection Patterns presented in Clause 8 use micro-KDM to provide greater granularity to their specification of weakness patterns. Additional semantic constraints are required to coordinate producers and consumers of KDM models to use the KDM Program Element layer for control- and data-flow analysis applications, as well as for providing more precision for the Resource Layer and the Abstraction Layer. Micro-KDM achieves this by constraining the granularity of the leaf action elements and their meaning by providing the set of micro-actions with predefined semantics. Micro-KDM treats the original macro-action as a container that owns certain micro-actions with predefined semantics. Thus, precise semantics of the macro-action is defined. Thus, micro-KDM constrains the patterns of how to map the statements of the existing system as determined by the programming language into KDM. KDM is helpful for reading this clause. However, for readers not familiar with KDM, Table 5 presents a primer

Table 5 — Software elements translated into KDM wording

Software element	KDM Outline
function, method, procedure, stored procedure, sub-routine etc.	CallableUnit MethodUnit id="ce1" ...
variable, field, member, etc.	StorableUnit MemberUnit id="de1" ...
class, interface definition and use as a type, use as base class	ClassUnit InterfaceUnit id="cu1" ... StorableUnit id="su1" type="cu1" ... ClassUnit id="cu2" ... Extends "cu1" ...
method	ClassUnit id="cu2" ... MethodUnit "mu1" ...
field, member	ClassUnit id="cu2" ... MemberUnit "mu1" ...
SQL stored procedures	DataModel RelationalSchema ... CallableUnit id="cu1" kind="stored" ...
return code value definition and use	CallableUnit MethodUnit id="ce1" type="ce1_signature" ... Signature "ce1_signature" ParameterUnit id="pu1" kind="return" ... Value StorableUnit MemberUnit id="de1" ... ActionElement id="ae1" kind="Call PtrCall MethodCall VirtualCall" ... Calls "ce1" Reads "de1"
exception	CallableUnit MethodUnit id="ce1" type="ce1_signature" ... Signature "ce1_signature" ParameterUnit id="pu1" kind="exception" ...

ISO/IEC 5055:2021(E)

Software element	KDM Outline
user input data flow	<pre> UIModel UIField id="uf1" UIAction id="ua1" implementation="ae1" kind="input" ReadsUI "uf1" ... CodeModel ... StorableUnit id="su1" StorableUnit id="su2" ActionElement id="ae1" kind="UI" Writes "su1" Flow "ae2" ActionElement id="ae2" Flow "ae3" Reads "su1" Writes "su2" ActionElement id="ae3" Flow "ae4" ... </pre>
execution path	<pre> ActionElement id="ae1" kind="UI" Flow Calls "ae2" ActionElement id="ae2" Flow Calls "ae3" ActionElement id="ae3" Flow Calls "ae4" </pre>
RDBMS	<pre> DataModel RelationalSchema ... </pre>

Software element	KDM Outline
checked	<pre>Value StorableUnit MemberUnit id="del" ... ActionElement id="ae1" kind="Equals NotEqualTo GreaterThan GreaterThanOrEqual LessThan LessThanOrEqual" ... Reads "del"</pre>

6.10 Software Patterns Metamodel Standard (SPMS)

This specification uses the Software Patterns Metamodel Standard (SPMS) to represent weaknesses as software patterns involving code elements and their relationships in source code. In the machine readable XMI format file attached to the current specification each weakness pattern is represented in SPMS Definitions Classes as follows:

- **PatternDefinition (SPMS:PatternDefinition):** the pattern specification describing a specific weakness and a specific detection pattern. In the context of this document, each Quality Measure Element is the count of occurrences of the SPMS detection patterns detected in the source code for a specific weakness related to the Quality Characteristic being measured.
- **Role (SPMS:Role):** “A pattern is informally defined as a set of relationships between a set of entities. Roles describe the set of entities within a pattern, between which relationships will be described. As such the Role is a required association in a PatternDefinition...Semantically, a Role is a 'slot' that is required to be fulfilled for an instance of its parent PatternDefinition to exist. Roles for weaknesses are abstractions, while the roles for detection patterns can be linked back to the code elements.
- **PatternSection (SPMS:PatternSection):** “A PatternSection is a free-form prose textual description of a portion of a PatternDefinition.” In the context of this document, there are 7 different PatternSections in use:
 - o “Descriptor” (“descriptor” in the XMI document) to provide pattern signature, a visible interface of the pattern.
 - o “Description” (“description” in XMI document) to provide a human readable explanation of the measure.
 - o “KDM Outline” (“kdm outline” in XMI document) to provide an illustration of the essential elements related to KDM, in a human readable outline.
 - o “What to report” (“reporting” in XMI document) to provide the list of elements to report to claim the finding of an occurrence of a detection pattern.
 - o “Reference” (“reference” in XMI document) to provide pointers to the weakness description in the CWE repository.
 - o “Usage name” (“usage_name” in XMI document) to provide a more user-friendly name to the weakness, generally the case when the weakness original name was too strongly KDM-flavored for the general audience.

SPMS Relationships Classes:

- MemberOf (SPMS:MemberOf): “An InterpatternRelationship specialized to indicate inclusion in a Category”.
- RelatedPattern (SPMS:RelatedPattern) with 4 different Natures (SPMS:Nature) (“DetectedBy”, “Detecting”, “AggregatedBy”, and “Aggregating”): InterpatternRelationships used to model the relations between weaknesses and detection patterns, and between parent and child weaknesses.
- Category (SPMS:Category): “A Category is a simple grouping element for gathering related PatternDefinitions into clusters.” In the context of this document, the SPMS Categories are used to represent the 4 Quality Characteristics:
 - o “Reliability”
 - o “Security”
 - o “Performance Efficiency”
 - o “Maintainability”

6.11 Reading guide

For each numbered sub-clause in clause 7:

- Sub-clause 7.x represents the Software Quality characteristic addressed by the associated weakness patterns.
- Sub-clause 7.x.y represents the SPMS modeling associated with a weakness pattern for a specific weakness associated with the Software Quality characteristic.

Weakness pattern sub-clauses are summarizing the various aspects related to a weakness:

- (SPMS) usage name pattern section, if any
- (SPMS) reference pattern section
- (SPMS) roles
- (SPMS) contributing weaknesses and parent weakness, if any,
 - o useful for reporting of weakness pattern-level information, aggregated or detailed
- (SPMS) detection patterns with reference numbers to subclauses in clause 8
 - o useful for reporting of detection pattern-level findings at the weakness level
 - o useful for counting the violations to the weakness, by summing the count of violations to its detection patterns

For each numbered sub-clause in clause 8:

- Sub-clause 8.x represents the SPMS modeling associated with a detection pattern

ISO/IEC 5055:2021(E)

Detection pattern sub-clauses are summarizing the various aspects related to a detection pattern:

- (SPMS) descriptor, description, KDM outline, reporting pattern sections,
 - In description and reporting pattern sections, data between angle brackets (e.g.: <ControlElement>) identify SPMS roles

7 List of ASCQM Weaknesses

7.1 Weakness Category Maintainability

7.1.1 CWE-407 Algorithmic Complexity

Reference

<https://cwe.mitre.org/data/definitions/407>

Roles

- the <ControlFlow>

Detection Patterns

8.2.132 ASCQM Ban Switch in Switch Statement

8.2.117 ASCQM Limit Algorithmic Complexity via Cyclomatic Complexity Value

8.2.134 ASCQM Limit Algorithmic Complexity via Essential Complexity Value

8.2.133 ASCQM Limit Algorithmic Complexity via Module Design Complexity Value

7.1.2 CWE-478 Missing Default Case in Switch Statement

Reference

<https://cwe.mitre.org/data/definitions/478>

Roles

- the <SwitchStatement>

Detection Patterns

8.2.135 ASCQM Use Default Case in Switch Statement

7.1.3 Weakness CWE-480 Use of Incorrect Operator

Reference

<https://cwe.mitre.org/data/definitions/480>

Roles

- the <Operator>

Detection Patterns

- 8.2.24 ASCQM Ban Assignment Operation Inside Logic Blocks
- 8.2.25 ASCQM Ban Comparison Expression Outside Logic Blocks
- 8.2.23 ASCQM Ban Incorrect Object Comparison
- 8.2.26 ASCQM Ban Incorrect String Comparison
- 8.2.27 ASCQM Ban Logical Operation with a Constant Operand

7.1.4 CWE-484 Omitted Break Statement in Switch

Reference

<https://cwe.mitre.org/data/definitions/484>

Roles

- the <SwitchStatement>

Detection Patterns

- 8.2.64 ASCQM Use Break in Switch Statement

7.1.5 CWE-561 Dead Code

Reference

<https://cwe.mitre.org/data/definitions/561>

Roles

- the <DeadCode>

Detection Patterns

- 8.2.131 ASCQM Ban Exception Definition without Ever Throwing It
- 8.2.130 ASCQM Ban Logical Dead Code
- 8.2.125 ASCQM Ban Unreferenced Dead Code

7.1.6 CWE-570 Expression is Always False

Reference

<https://cwe.mitre.org/data/definitions/570>

Roles

- the <BooleanExpression>

Detection Patterns

- 8.2.79 ASCQM Check Boolean Variables are Updated in Different Conditional Branches before Use

7.1.7 CWE-571 Expression is Always True

Reference

<https://cwe.mitre.org/data/definitions/571>

ISO/IEC 5055:2021(E)

Roles

- the <BooleanExpression>

Detection Patterns

8.2.79 ASCQM Check Boolean Variables are Updated in Different Conditional Branches before Use

7.1.8 CWE-783 Operator Precedence Logic Error

Reference

<https://cwe.mitre.org/data/definitions/783>

Roles

- the <Formula>

Detection Patterns

8.2.82 ASCQM Ban Incorrect Joint Comparison

8.2.81 ASCQM Ban Not Operator On Non-Boolean Operand Of Comparison Operation

8.2.80 ASCQM Ban Not Operator On Operand Of Bitwise Operation

7.1.9 CWE-1075 Unconditional Control Flow Transfer Outside of Switch Block

Usage name

Control transferred outside switch statement

Reference

<https://cwe.mitre.org/data/definitions/1075>

Roles

- the <SwitchBlock>

- the <ControlFlowTransfer>

Detection Patterns

8.2.122 ASCQM Ban Control Flow Transfer

7.1.10 CWE-1121 Excessive McCabe Cyclomatic Complexity Value

Usage name

Excessive Cyclomatic Complexity

Reference

<https://cwe.mitre.org/data/definitions/1121>

Roles

- the <Operation>

- the <ControlFlow>

Detection Patterns

8.2.117 ASCQM Limit Algorithmic Complexity via Cyclomatic Complexity Value

7.1.11 CWE-1054 Invocation of a Control Element at an Unnecessarily Deep Horizontal Layer (Layer-skipping Call)

Usage name

Layer-skipping calls

Reference

<https://cwe.mitre.org/data/definitions/1054>

Roles

- the <Layer1>
- the <Layer2>
- the <Call>

Detection Patterns

8.2.44 ASCQM Ban Unintended Paths

7.1.12 CWE-1064 Invokable Control Element with Signature Containing an Excessive Number of Parameters

Usage name

Excessive parameterization

Reference

<https://cwe.mitre.org/data/definitions/1064>

Roles

- the <OperationSignature>

Detection Patterns

8.2.124 ASCQM Limit Number of Parameters

7.1.13 CWE-1084 Invokable Control Element with Excessive File or Data Access Operations

Usage name

Control element with excessive data operations

Reference

<https://cwe.mitre.org/data/definitions/1084>

Roles

- the <Operation>
- the <DataAccesses>

ISO/IEC 5055:2021(E)

Detection Patterns

8.2.118 ASCQM Limit Number of Data Access

7.1.14 CWE-1051 Initialization with Hard-Coded Network Resource Configuration Data

Usage name

Hard-coded network resource information

Reference

<https://cwe.mitre.org/data/definitions/1051>

Roles

- the <NetworkResourceAccess>
- the <HardCodedValue>

Detection Patterns

8.2.43 ASCQM Ban Hard-Coded Literals used to Connect to Resource

7.1.15 CWE-1090 Method Containing Access of a Member Element from Another Class

Usage name

Cross element data access

Reference

<https://cwe.mitre.org/data/definitions/1090>

Roles

- the <Class1>
- the <Class2>
- the <Reference>

Detection Patterns

8.2.121 ASCQM Ban Usage of Data Elements from Other Classes

7.1.16 CWE-1074 Class with Excessively Deep Inheritance

Usage name

Excessive inheritance levels

Reference

<https://cwe.mitre.org/data/definitions/1074>

Roles

the <ClassInheritanceTree>

Detection Patterns

8.2.120 ASCQM Ban Excessive Number of Inheritance Levels

7.1.17 CWE-1086 Class with Excessive Number of Child Classes

Usage name

Excessive child classes

Reference

<https://cwe.mitre.org/data/definitions/1086>

Roles

- the <Class>
- the <Children>

Detection Patterns

8.2.119 ASCQM Ban Excessive Number of Children

7.1.18 CWE-1041 Use of Redundant Code (Copy-Paste)

Usage name

Element redundancy

Reference

<https://cwe.mitre.org/data/definitions/1041>

Roles

- the <Operation1>
- the <Operation2>
- the <SimilarCodeElements>

Detection Patterns

8.2.116 ASCQM Limit Volume of Similar Code

7.1.19 CWE-1055 Multiple Inheritance from Concrete Classes

Usage name

Excessive inheritance from concrete classes

Reference

<https://cwe.mitre.org/data/definitions/1055>

Roles

- the <ClassInheritanceDeclaration>
- the <ConcreteClasses>

ISO/IEC 5055:2021(E)

Detection Patterns

8.2.126 ASCQM Ban Excessive Number of Concrete Implementations to Inherit From

7.1.20 CWE-1045 Parent Class with a Virtual Destructor and a Child Class without a Virtual Destructor

Usage name

Child class missing virtual destructor

Reference

<https://cwe.mitre.org/data/definitions/1045>

Roles

- the <ParentClass>
- the <ParentClassVirtualDestructor>
- the <ChildClass>

Detection Patterns

8.2.35 ASCQM Implement Virtual Destructor for Classes Derived from Class with Virtual Destructor

7.1.21 CWE-1052 Excessive Use of Hard-Coded Literals in Initialization

Usage name

Hard-coded literals

Reference

<https://cwe.mitre.org/data/definitions/1052>

Roles

- the <Initialization>
- the <HardCodedValue>

Detection Patterns

8.2.129 ASCQM Ban Hard-Coded Literals used to Initialize Variables

7.1.22 CWE-1048 Invokable Control Element with Large Number of Outward Calls (Excessive Coupling or Fan-out)

Usage name

Excessive references

Reference

<https://cwe.mitre.org/data/definitions/1048>

Roles

- the <Operation>
- the <OutwardCalls>

Detection Patterns

8.2.127 ASCQM Limit Number of Outward Calls

7.1.23 CWE-1095 Loop Condition Value Update within the Loop

Usage name

Condition value update within loop

Reference

<https://cwe.mitre.org/data/definitions/1095>

Roles

- the <LoopCondition>
- the <LoopValueUpdate>

Detection Patterns

8.2.123 ASCQM Ban Loop Value Update within Incremental and Decremental Loop

7.1.24 CWE-1085 Invokable Control Element with Excessive Volume of Commented-out Code

Usage name

Excessive commented-out code

Reference

<https://cwe.mitre.org/data/definitions/1085>

Roles

- the <CommentedOutCode>

Detection Patterns

8.2.114 ASCQM Limit Volume of Commented-Out Code

7.1.25 CWE-1047 Modules with Circular Dependencies

Usage name

Circular dependencies

Reference

<https://cwe.mitre.org/data/definitions/1047>

Roles

- the <ModuleDependencyCycles>

Detection Patterns

8.2.113 ASCQM Ban Circular Dependencies between Modules

ISO/IEC 5055:2021(E)

7.1.26 CWE-1080 Source Code File with Excessive Number of Lines of Code

Usage name

Excessively large file

Reference

<https://cwe.mitre.org/data/definitions/1080>

Roles

- the <Operation>
- the <SourceCode>

Detection Patterns

8.2.115 ASCQM Limit Size of Operations Code

7.1.27 CWE-1062 Parent Class Element with References to Child Class

Usage name

Parent class referencing child class

Reference

<https://cwe.mitre.org/data/definitions/1062>

Roles

- the <ParentClass>
- the <ChildClass>
- the <Reference>

Detection Patterns

8.2.112 ASCQM Ban Conversion References to Child Class

7.1.28 CWE-1087 Class with Virtual Method without a Virtual Destructor

Usage name

Class with virtual method missing destructor

Reference

<https://cwe.mitre.org/data/definitions/1087>

Roles

- the <Class>
- the <VirtualMethod>

Detection Patterns

8.2.38 ASCQM Implement Virtual Destructor for Classes with Virtual Methods

7.1.29 CWE-1079 Parent Class without Virtual Destructor Method

Usage name

Parent class missing virtual destructor

Reference

<https://cwe.mitre.org/data/definitions/1079>

Roles

- the <ParentClass>

Detection Patterns

8.2.36 ASCQM Implement Virtual Destructor for Parent Classes

7.1.30 Maintainability Detection Patterns

Detection Patterns

- 8.2.24 ASCQM Ban Assignment Operation Inside Logic Blocks
- 8.2.113 ASCQM Ban Circular Dependencies between Modules
- 8.2.25 ASCQM Ban Comparison Expression Outside Logic Blocks
- 8.2.122 ASCQM Ban Control Flow Transfer
- 8.2.112 ASCQM Ban Conversion References to Child Class
- 8.2.131 ASCQM Ban Exception Definition without Ever Throwing It
- 8.2.119 ASCQM Ban Excessive Number of Children
- 8.2.126 ASCQM Ban Excessive Number of Concrete Implementations to Inherit From
- 8.2.120 ASCQM Ban Excessive Number of Inheritance Levels
- 8.2.43 ASCQM Ban Hard-Coded Literals used to Connect to Resource
- 8.2.129 ASCQM Ban Hard-Coded Literals used to Initialize Variables
- 8.2.82 ASCQM Ban Incorrect Joint Comparison
- 8.2.23 ASCQM Ban Incorrect Object Comparison
- 8.2.26 ASCQM Ban Incorrect String Comparison
- 8.2.130 ASCQM Ban Logical Dead Code
- 8.2.27 ASCQM Ban Logical Operation with a Constant Operand
- 8.2.123 ASCQM Ban Loop Value Update within Incremental and Decremental Loop
- 8.2.81 ASCQM Ban Not Operator On Non-Boolean Operand Of Comparison Operation
- 8.2.80 ASCQM Ban Not Operator On Operand Of Bitwise Operation
- 8.2.132 ASCQM Ban Switch in Switch Statement
- 8.2.44 ASCQM Ban Unintended Paths
- 8.2.125 ASCQM Ban Unreferenced Dead Code
- 8.2.121 ASCQM Ban Usage of Data Elements from Other Classes
- 8.2.79 ASCQM Check Boolean Variables are Updated in Different Conditional Branches before Use
- 8.2.35 ASCQM Implement Virtual Destructor for Classes Derived from Class with Virtual Destructor
- 8.2.38 ASCQM Implement Virtual Destructor for Classes with Virtual Methods
- 8.2.36 ASCQM Implement Virtual Destructor for Parent Classes
- 8.2.117 ASCQM Limit Algorithmic Complexity via Cyclomatic Complexity Value
- 8.2.134 ASCQM Limit Algorithmic Complexity via Essential Complexity Value
- 8.2.133 ASCQM Limit Algorithmic Complexity via Module Design Complexity Value
- 8.2.118 ASCQM Limit Number of Data Access
- 8.2.127 ASCQM Limit Number of Outward Calls
- 8.2.124 ASCQM Limit Number of Parameters
- 8.2.115 ASCQM Limit Size of Operations Code

ISO/IEC 5055:2021(E)

- 8.2.114 ASCQM Limit Volume of Commented-Out Code
- 8.2.116 ASCQM Limit Volume of Similar Code
- 8.2.64 ASCQM Use Break in Switch Statement
- 8.2.135 ASCQM Use Default Case in Switch Statement

7.2 Weakness Category Performance Efficiency

7.2.1 CWE-401 Improper Release of Memory Before Removing Last Reference ('Memory Leak')

Reference

<https://cwe.mitre.org/data/definitions/401>

Roles

- the <MemoryAllocation>

Parent weaknesses

CWE-404 Improper Resource Shutdown or Release

Detection Patterns

- 8.2.29 ASCQM Ban Comma Operator from Delete Statement
- 8.2.32 ASCQM Implement Required Operations for Manual Resource Management
- 8.2.34 ASCQM Release Memory After Use
- 8.2.31 ASCQM Release Memory after Use with Correct Operation
- 8.2.33 ASCQM Release Platform Resource after Use
- 8.2.30 ASCQM Release in Destructor Memory Allocated in Constructor

7.2.2 Weakness CWE-404 Improper Resource Shutdown or Release

Reference

<https://cwe.mitre.org/data/definitions/404>

Roles

- the <ResourceAllocation>

Contributing weaknesses

CWE-401 Improper Release of Memory Before Removing Last Reference ('Memory Leak')
CWE-772 Missing Release of Resource after Effective Lifetime
CWE-775 Missing Release of File Descriptor or Handle after Effective Lifetime

Detection Patterns

- 8.2.29 ASCQM Ban Comma Operator from Delete Statement
- 8.2.35 ASCQM Implement Virtual Destructor for Classes Derived from Class with Virtual Destructor
- 8.2.38 ASCQM Implement Virtual Destructor for Classes with Virtual Methods
- 8.2.36 ASCQM Implement Virtual Destructor for Parent Classes
- 8.2.37 ASCQM Release File Resource after Use in Operation
- 8.2.33 ASCQM Release Platform Resource after Use
- 8.2.30 ASCQM Release in Destructor Memory Allocated in Constructor

7.2.3 CWE-424 Improper Protection of Alternate Path

Reference

<https://cwe.mitre.org/data/definitions/424>

Roles

- the <AlternatePath>

Detection Patterns

8.2.44 ASCQM Ban Unintended Paths

7.2.4 CWE-772 Missing Release of Resource after Effective Lifetime

Reference

<https://cwe.mitre.org/data/definitions/772>

Roles

- the <ResourceAllocation>

Parent weaknesses

CWE-404 Improper Resource Shutdown or Release

Detection Patterns

8.2.37 ASCQM Release File Resource after Use in Operation

8.2.33 ASCQM Release Platform Resource after Use

8.2.30 ASCQM Release in Destructor Memory Allocated in Constructor

7.2.5 CWE-775 Missing Release of File Descriptor or Handle after Effective Lifetime

Reference

<https://cwe.mitre.org/data/definitions/775>

Roles

- the <FileDescriptorOrHandleAllocation>

Parent weaknesses

Weakness CWE-775 Missing Release of File Descriptor or Handle after Effective Lifetime

Detection Patterns

8.2.63 ASCQM Release File Resource after Use in Class

8.2.37 ASCQM Release File Resource after Use in Operation

7.2.6 CWE-1073 Non-SQL Invokable Control Element with Excessive Number of Data Resource Access

Usage name

Excessive data queries in client-side code

ISO/IEC 5055:2021(E)

Reference

<https://cwe.mitre.org/data/definitions/1073>

Roles

- the <NonSQLOperation>
- the <DataAccesses>

Detection Patterns

8.2.109 ASCQM Ban Excessive Number of Data Resource Access from non-SQL Code

7.2.7 CWE-1057 Data Access Operations Outside of Designated Data Manager Component

Usage name

Circumventing data access routines

Reference

<https://cwe.mitre.org/data/definitions/1057>

Roles

- the <DataManager>
- the <DataAccess>

Detection Patterns

8.2.44 ASCQM Ban Unintended Paths

7.2.8 CWE-1043 Storable and Member Data Element Excessive Number of Aggregated Storable and Member Data Elements

Usage name

Excessively large data element

Reference

<https://cwe.mitre.org/data/definitions/1043>

Roles

- the <AggregationData>
- the <AggregatedData>

Detection Patterns

8.2.107 ASCQM Limit Number of Aggregated Non-Primitive Data Types

7.2.9 CWE-1072 Data Resource Access without use of Connection Pooling

Usage name

Data access not using connection pool

Reference

<https://cwe.mitre.org/data/definitions/1072>

Roles

- the <Connection>

Detection Patterns

8.2.101 ASCQM Ban Use of Prohibited Low-Level Resource Management Functionality

7.2.10 CWE-1060 Excessive Number of Inefficient Server-Side Data Accesses

Usage name

Excessive data queries in non-stored procedure

Reference

<https://cwe.mitre.org/data/definitions/1060>

Roles

- the <NonStoredSQLOperation>
- the <DataAccesses>

Detection Patterns

8.2.108 ASCQM Ban Excessive Number of Data Resource Access from non-stored SQL Procedure

7.2.11 CWE-1091 Use of Object without Invoking Destructor Method

Reference

<https://cwe.mitre.org/data/definitions/1091>

Roles

- the <Object>

Detection Patterns

8.2.31 ASCQM Release Memory after Use with Correct Operation

7.2.12 CWE-1046 Creation of Immutable Text Using String Concatenation

Usage name

Immutable text data

Reference

<https://cwe.mitre.org/data/definitions/1046>

Roles

- the <ImmutableDataCreation>

ISO/IEC 5055:2021(E)

Detection Patterns

8.2.110 ASCQM Ban Incremental Creation of Immutable Data

7.2.13 CWE-1042 Static Member Data Element outside of a Singleton Class Element

Usage name

Static data outside of singleton class

Reference

<https://cwe.mitre.org/data/definitions/1042>

Roles

- the <StaticDataDeclaration>

Detection Patterns

8.2.111 ASCQM Ban Static Non-Final Data Element Outside Singleton

7.2.14 CWE-1049 Excessive Data Query Operations in a Large Data Table

Usage name

Complex read/write access

Reference

<https://cwe.mitre.org/data/definitions/1049>

Roles

- the <DataQuery>

Detection Patterns

8.2.105 ASCQM Ban Excessive Complexity of Data Resource Access

7.2.15 CWE-1067 Excessive Execution of Sequential Searches of Data Resource

Usage name

Incorrect indices

Reference

<https://cwe.mitre.org/data/definitions/1067>

Roles

- the <DataQuery>
- the <TableOrView>

Detection Patterns

8.2.103 ASCQM Implement Index Required by Query on Large Tables

7.2.16 CWE-1089 Large Data Table with Excessive Number of Indices

Usage name

Excessive number of indices on large tables

Reference

<https://cwe.mitre.org/data/definitions/1089>

Roles

- the <Table>
- the <Indexes>

Detection Patterns

8.2.104 ASCQM Ban Excessive Number of Index on Columns of Large Tables

7.2.17 CWE-1094 Excessive Index Range Scan for a Data Resource

Usage name

Excessively large indices on large tables

Reference

<https://cwe.mitre.org/data/definitions/1094>

Roles

- the <Table>
- the <Indexes>

Detection Patterns

8.2.102 ASCQM Ban Excessive Size of Index on Columns of Large Tables

7.2.18 CWE-1050 Excessive Platform Resource Consumption within a Loop

Usage name

Resource consuming operation in loop

Reference

<https://cwe.mitre.org/data/definitions/1050>

Roles

- the <Loop>
- the <ExpensiveOperation>

Detection Patterns

8.2.106 ASCQM Ban Expensive Operations in Loops

ISO/IEC 5055:2021(E)

7.2.19 CWE-1060 Excessive Number of Inefficient Server-Side Data Accesses

Usage name

Excessive data queries in non-stored procedure

Reference

<https://cwe.mitre.org/data/definitions/1060>

Roles

- the <NonStoredSQLOperation>
- the <DataAccesses>

Detection Patterns

8.2.108 ASCQM Ban Excessive Number of Data Resource Access from non-stored SQL Procedure

7.2.20 Performance Efficiency Detection Patterns

Detection Patterns

- 8.2.29 ASCQM Ban Comma Operator from Delete Statement
- 8.2.105 ASCQM Ban Excessive Complexity of Data Resource Access
- 8.2.109 ASCQM Ban Excessive Number of Data Resource Access from non-SQL Code
- 8.2.108 ASCQM Ban Excessive Number of Data Resource Access from non-stored SQL Procedure
- 8.2.104 ASCQM Ban Excessive Number of Index on Columns of Large Tables
- 8.2.102 ASCQM Ban Excessive Size of Index on Columns of Large Tables
- 8.2.106 ASCQM Ban Expensive Operations in Loops
- 8.2.110 ASCQM Ban Incremental Creation of Immutable Data
- 8.2.111 ASCQM Ban Static Non-Final Data Element Outside Singleton
- 8.2.44 ASCQM Ban Unintended Paths
- 8.2.101 ASCQM Ban Use of Prohibited Low-Level Resource Management Functionality
- 8.2.103 ASCQM Implement Index Required by Query on Large Tables
- 8.2.32 ASCQM Implement Required Operations for Manual Resource Management
- 8.2.35 ASCQM Implement Virtual Destructor for Classes Derived from Class with Virtual Destructor
- 8.2.38 ASCQM Implement Virtual Destructor for Classes with Virtual Methods
- 8.2.36 ASCQM Implement Virtual Destructor for Parent Classes
- 8.2.107 ASCQM Limit Number of Aggregated Non-Primitive Data Types
- 8.2.63 ASCQM Release File Resource after Use in Class
- 8.2.37 ASCQM Release File Resource after Use in Operation
- 8.2.34 ASCQM Release Memory After Use
- 8.2.31 ASCQM Release Memory after Use with Correct Operation
- 8.2.33 ASCQM Release Platform Resource after Use
- 8.2.30 ASCQM Release in Destructor Memory Allocated in Constructor

7.3 Weakness Category Reliability

7.3.1 CWE-119 Improper Restriction of Operations within the Bounds of a Memory Buffer

Reference

<https://cwe.mitre.org/data/definitions/119>

Roles

- the <BufferOperation>

Contributing weaknesses

CWE-120 Buffer Copy without Checking Size of Input ('Classic Buffer Overflow')
CWE-123 Write-what-where Condition
CWE-125 Out-of-bounds Read
CWE-130 Improper Handling of Length Parameter Inconsistency
CWE-786 Access of Memory Location Before Start of Buffer
CWE-787 Out-of-bounds Write
CWE-788 Access of Memory Location After End of Buffer
CWE-805 Buffer Access with Incorrect Length Value
CWE-822 Untrusted Pointer Dereference
CWE-823 Use of Out-of-range Pointer Offset
CWE-824 Access of Uninitialized Pointer
CWE-825 Expired Pointer Dereference

Detection Patterns

8.2.6 ASCQM Ban Input Acquisition Primitives without Boundary Checking Capabilities
8.2.3 ASCQM Ban String Manipulation Primitives without Boundary Checking Capabilities
8.2.5 ASCQM Ban Use of Expired Pointer
8.2.1 ASCQM Check Index of Array Access
8.2.2 ASCQM Check Input of Memory Manipulation Primitives
8.2.4 ASCQM Check Input of String Manipulation Primitives with Boundary Checking Capabilities
8.2.7 ASCQM Check Offset used in Pointer Arithmetic
8.2.9 ASCQM Initialize Pointers before Use
8.2.8 ASCQM Sanitize User Input used as Pointer

7.3.2 CWE-120 Buffer Copy without Checking Size of Input ('Classic Buffer Overflow')

Reference

<https://cwe.mitre.org/data/definitions/120>

Roles

- the <BufferCopy>

Parent weaknesses

CWE-119 Improper Restriction of Operations within the Bounds of a Memory Buffer

Detection Patterns

8.2.6 ASCQM Ban Input Acquisition Primitives without Boundary Checking Capabilities
8.2.3 ASCQM Ban String Manipulation Primitives without Boundary Checking Capabilities

7.3.3 CWE-123 Write-what-where Condition

Reference

<https://cwe.mitre.org/data/definitions/123>

ISO/IEC 5055:2021(E)

Roles

- the <BufferWrite>

Parent weaknesses

CWE-119 Improper Restriction of Operations within the Bounds of a Memory Buffer

Detection Patterns

8.2.3 ASCQM Ban String Manipulation Primitives without Boundary Checking Capabilities

7.3.4 CWE-125 Out-of-bounds Read

Reference

<https://cwe.mitre.org/data/definitions/125>

Roles

- the <BufferRead>

Parent weaknesses

CWE-119 Improper Restriction of Operations within the Bounds of a Memory Buffer

Detection Patterns

8.2.1 ASCQM Check Index of Array Access

7.3.5 CWE-130 Improper Handling of Length Parameter Inconsistency

Reference

<https://cwe.mitre.org/data/definitions/130>

Roles

- the <DataHandling>
- the <LengthParameter>

Parent weaknesses

CWE-119 Improper Restriction of Operations within the Bounds of a Memory Buffer

Detection Patterns

8.2.1 ASCQM Check Index of Array Access

7.3.6 CWE-131 Incorrect Calculation of Buffer Size

Reference

<https://cwe.mitre.org/data/definitions/131>

Roles

- the <BufferSizeCalculation>

Parent weaknesses

CWE-682 Incorrect Calculation

Detection Patterns

8.2.71 ASCQM Ban Buffer Size Computation Based on Array Element Pointer Size

8.2.70 ASCQM Ban Buffer Size Computation Based on Bitwise Logical Operation

8.2.72 ASCQM Ban Buffer Size Computation Based on Incorrect String Length Value

7.3.7 CWE-170 Improper Null Termination

Reference

<https://cwe.mitre.org/data/definitions/170>

Roles

- the <BufferWithoutNULLTermination>

Detection Patterns

8.2.62 ASCQM NULL Terminate Output Of String Manipulation Primitives

7.3.8 CWE-194 Unexpected Sign Extension

Reference

<https://cwe.mitre.org/data/definitions/194>

Roles

- the <NumberSignExtension>

Parent weaknesses

CWE-681 Incorrect Conversion between Numeric Types

Detection Patterns

8.2.47 ASCQM Ban Incorrect Numeric Implicit Conversion

7.3.9 CWE-195 Signed to Unsigned Conversion Error

Reference

<https://cwe.mitre.org/data/definitions/195>

Roles

- the <NumberConversionToUnsigned>

Parent weaknesses

CWE-681 Incorrect Conversion between Numeric Types

Detection Patterns

8.2.47 ASCQM Ban Incorrect Numeric Implicit Conversion

ISO/IEC 5055:2021(E)

7.3.10 CWE-196 Unsigned to Signed Conversion Error

Reference

<https://cwe.mitre.org/data/definitions/196>

Roles

- the <NumberConversionToSigned>

Parent weaknesses

CWE-681 Incorrect Conversion between Numeric Types

Detection Patterns

8.2.47 ASCQM Ban Incorrect Numeric Implicit Conversion

7.3.11 CWE-197 Numeric Truncation Error

Reference

<https://cwe.mitre.org/data/definitions/197>

Roles

- the <NumberTruncation>

Parent weaknesses

CWE-681 Incorrect Conversion between Numeric Types

Detection Patterns

8.2.47 ASCQM Ban Incorrect Numeric Implicit Conversion

7.3.12 CWE-248 Uncaught Exception

Reference

<https://cwe.mitre.org/data/definitions/248>

Roles

- the <ExceptionThrowDeclaration>
- the <ExceptionCatchSequence>

Parent weaknesses

CWE-703 Improper Check or Handling of Exceptional Conditions

Detection Patterns

8.2.65 ASCQM Catch Exceptions

7.3.13 CWE-252 Unchecked Return Value

Reference

<https://cwe.mitre.org/data/definitions/252>

Roles

- the <OperationCall>

Detection Patterns

8.2.21 ASCQM Check Return Value of Resource Operations Immediately

8.2.20 ASCQM Handle Return Value of Must Check Operations

7.3.14 CWE-366 Race Condition within a Thread

Reference

<https://cwe.mitre.org/data/definitions/366>

Roles

- the <Thread1>

- the <Thread2>

- the <ConflictingResource>

Parent weaknesses

CWE-662 Improper Synchronization

Detection Patterns

8.2.57 ASCQM Ban Creation of Lock On Private Non-Static Object to Access Private Static Data

8.2.48 ASCQM Data Read and Write without Proper Locking in Multi-Threaded Context

7.3.15 CWE-369 Divide by Zero

Reference

<https://cwe.mitre.org/data/definitions/369>

Roles

- the <Division>

Parent weaknesses

CWE-682 Incorrect Calculation

Detection Patterns

8.2.56 ASCQM Check and Handle ZERO Value before Use as Divisor

7.3.16 CWE-390 Detection of Error Condition Without Action

Reference

<https://cwe.mitre.org/data/definitions/390>

ISO/IEC 5055:2021(E)

Roles

- the <ErrorCondition>

Detection Patterns

8.2.66 ASCQM Ban Empty Exception Block

8.2.18 ASCQM Handle Return Value of Resource Operations

7.3.17 CWE-391 Unchecked Error Condition

Reference

<https://cwe.mitre.org/data/definitions/391>

Roles

- the <ErrorConditionProcessing>

Parent weaknesses

CWE-703 Improper Check or Handling of Exceptional Conditions

Detection Patterns

8.2.66 ASCQM Ban Empty Exception Block

8.2.22 ASCQM Ban Useless Handling of Exceptions

7.3.18 CWE-392 Missing Report of Error Condition

Reference

<https://cwe.mitre.org/data/definitions/392>

Roles

- the <ErrorConditionProcessing>

Parent weaknesses

CWE-703 Improper Check or Handling of Exceptional Conditions

Detection Patterns

8.2.22 ASCQM Ban Useless Handling of Exceptions

7.3.19 CWE-394 Unexpected Status Code or Return Value

Reference

<https://cwe.mitre.org/data/definitions/394>

Roles

- the <ReturnValue>

Detection Patterns

8.2.19 ASCQM Ban Incorrect Numeric Conversion of Return Value

8.2.20 ASCQM Handle Return Value of Must Check Operations

8.2.18 ASCQM Handle Return Value of Resource Operations

7.3.20 CWE-401 Improper Release of Memory Before Removing Last Reference ('Memory Leak')

Reference

<https://cwe.mitre.org/data/definitions/401>

Roles

- the <MemoryAllocation>

Parent weaknesses

CWE-404 Improper Resource Shutdown or Release

Detection Patterns

- 8.2.29 ASCQM Ban Comma Operator from Delete Statement
- 8.2.32 ASCQM Implement Required Operations for Manual Resource Management
- 8.2.34 ASCQM Release Memory After Use
- 8.2.31 ASCQM Release Memory after Use with Correct Operation
- 8.2.33 ASCQM Release Platform Resource after Use
- 8.2.30 ASCQM Release in Destructor Memory Allocated in Constructor

7.3.21 CWE-404 Improper Resource Shutdown or Release

Reference

<https://cwe.mitre.org/data/definitions/404>

Roles

- the <ResourceAllocation>

Contributing weaknesses

CWE-401 Improper Release of Memory Before Removing Last Reference ('Memory Leak')
CWE-772 Missing Release of Resource after Effective Lifetime
CWE-775 Missing Release of File Descriptor or Handle after Effective Lifetime

Detection Patterns

- 8.2.29 ASCQM Ban Comma Operator from Delete Statement
- 8.2.35 ASCQM Implement Virtual Destructor for Classes Derived from Class with Virtual Destructor
- 8.2.38 ASCQM Implement Virtual Destructor for Classes with Virtual Methods
- 8.2.36 ASCQM Implement Virtual Destructor for Parent Classes
- 8.2.37 ASCQM Release File Resource after Use in Operation
- 8.2.33 ASCQM Release Platform Resource after Use
- 8.2.30 ASCQM Release in Destructor Memory Allocated in Constructor

7.3.22 CWE-415 Double Free

Reference

<https://cwe.mitre.org/data/definitions/415>

ISO/IEC 5055:2021(E)

Roles

- the <ResourceRelease >
- the <ResourceAccess>

- the <ResourceUse>

Parent weaknesses

CWE-672 Operation on a Resource after Expiration or Release

Detection Patterns

8.2.76 ASCQM Ban Double Free On Pointers

7.3.23 CWE-416 Use After Free

Reference

<https://cwe.mitre.org/data/definitions/416>

Roles

- the <ResourceRelease>
- the <ResourceUse>

Parent weaknesses

CWE-672 Operation on a Resource after Expiration or Release

Detection Patterns

- 8.2.14 ASCQM Ban Free Operation on Pointer Received as Parameter
- 8.2.5 ASCQM Ban Use of Expired Pointer
- 8.2.13 ASCQM Implement Copy Constructor for Class with Pointer Resource

7.3.24 CWE-424 Improper Protection of Alternate Path

Reference

<https://cwe.mitre.org/data/definitions/424>

Roles

- the <AlternatePath>

Detection Patterns

8.2.44 ASCQM Ban Unintended Paths

7.3.25 CWE-456 Missing Initialization of a Variable

Reference

<https://cwe.mitre.org/data/definitions/456>

Roles

- the <VariableDeclaration>

Parent weaknesses

CWE-665 Improper Initialization

Detection Patterns

8.2.75 ASCQM Ban Allocation of Memory with Null Size

8.2.74 ASCQM Initialize Variables

7.3.26 CWE-459 Incomplete Cleanup

Reference

<https://cwe.mitre.org/data/definitions/459>

Roles

- the <ResourceAllocation>
- the <ResourceRelease>

Detection Patterns

8.2.31 ASCQM Release Memory after Use with Correct Operation

7.3.27 CWE-476 NULL Pointer Dereference

Reference

<https://cwe.mitre.org/data/definitions/476>

Roles

- the <PointerDereferencing>

Detection Patterns

8.2.10 ASCQM Check NULL Pointer Value before Use

7.3.28 CWE-480 Use of Incorrect Operator

Reference

<https://cwe.mitre.org/data/definitions/480>

Roles

- the <Operator>

Detection Patterns

- 8.2.24 ASCQM Ban Assignment Operation Inside Logic Blocks
- 8.2.25 ASCQM Ban Comparison Expression Outside Logic Blocks
- 8.2.23 ASCQM Ban Incorrect Object Comparison
- 8.2.26 ASCQM Ban Incorrect String Comparison
- 8.2.27 ASCQM Ban Logical Operation with a Constant Operand

ISO/IEC 5055:2021(E)

7.3.29 CWE-484 Omitted Break Statement in Switch

Reference

<https://cwe.mitre.org/data/definitions/484>

Roles

- the <SwitchStatement>

Detection Patterns

8.2.64 ASCQM Use Break in Switch Statement

7.3.30 CWE-543 Use of Singleton Pattern Without Synchronization in a Multithreaded Context

Reference

<https://cwe.mitre.org/data/definitions/543>

Roles

- the <SingletonUse>

Parent weaknesses

CWE-662 Improper Synchronization

Detection Patterns

8.2.41 ASCQM Ban Non-Final Static Data in Multi-Threaded Context

8.2.46 ASCQM Singleton Creation without Proper Locking in Multi-Threaded Context

7.3.31 CWE-562 Return of Stack Variable Address

Reference

<https://cwe.mitre.org/data/definitions/562>

Roles

- the <ReturnStatement>

Detection Patterns

8.2.52 ASCQM Ban Return of Local Variable Address

8.2.53 ASCQM Ban Storage of Local Variable Address in Global Variable

7.3.32 CWE-567 Unsynchronized Access to Shared Data in a Multithreaded Context

Reference

<https://cwe.mitre.org/data/definitions/567>

Roles

- the <SharedDataAccess>

Parent weaknesses

CWE-662 Improper Synchronization

Detection Patterns

8.2.41 ASCQM Ban Non-Final Static Data in Multi-Threaded Context

8.2.48 ASCQM Data Read and Write without Proper Locking in Multi-Threaded Context

7.3.33 CWE-595 Comparison of Object References Instead of Object Contents

Reference

<https://cwe.mitre.org/data/definitions/595>

Roles

- the <ObjectReferencesComparison>

Contributing weaknesses

CWE-597 Use of Wrong Operator in String Comparison

CWE-1097 Persistent Storable Data Element without Associated Comparison Control Element

Detection Patterns

8.2.23 ASCQM Ban Incorrect Object Comparison

8.2.26 ASCQM Ban Incorrect String Comparison

8.2.28 ASCQM Implement Correct Object Comparison Operations

7.3.34 CWE-597 Use of Wrong Operator in String Comparison

Reference

<https://cwe.mitre.org/data/definitions/597>

Roles

- the <StringComparison>

Parent weaknesses

CWE-595 Comparison of Object References Instead of Object Contents

Detection Patterns

8.2.26 ASCQM Ban Incorrect String Comparison

7.3.35 CWE-662 Improper Synchronization

Reference

<https://cwe.mitre.org/data/definitions/662>

Roles

- the <Thread1>

- the <Thread2>

- the <SharedResourceAccess>

ISO/IEC 5055:2021(E)

Contributing weaknesses

CWE-366 Race Condition within a Thread
CWE-543 Use of Singleton Pattern Without Synchronization in a Multithreaded Context
CWE-567 Unsynchronized Access to Shared Data in a Multithreaded Context
CWE-667 Improper Locking
CWE-764 Multiple Locks of a Critical Resource
CWE-820 Missing Synchronization
CWE-821 Incorrect Synchronization
CWE-833 Deadlock
CWE-1058 Invokable Control Element in Multi-Thread Context with non-Final Static Storable or Member Element
CWE-1096 Singleton Class Instance Creation without Proper Locking or Synchronization

Detection Patterns

8.2.61 ASCQM Ban Creation of Lock On Inappropriate Object Type
8.2.60 ASCQM Ban Creation of Lock On Non-Final Object
8.2.57 ASCQM Ban Creation of Lock On Private Non-Static Object to Access Private Static Data
8.2.68 ASCQM Ban Incompatible Lock Acquisition Sequences
8.2.49 ASCQM Ban Incorrect Synchronization Mechanisms
8.2.41 ASCQM Ban Non-Final Static Data in Multi-Threaded Context
8.2.50 ASCQM Ban Resource Access without Proper Locking in Multi-Threaded Context
8.2.73 ASCQM Ban Sequential Acquisitions of Single Non-Reentrant Lock
8.2.59 ASCQM Ban Sleep Between Lock Acquisition and Release
8.2.69 ASCQM Ban Use of Thread Control Primitives with Known Deadlock Issues
8.2.48 ASCQM Data Read and Write without Proper Locking in Multi-Threaded Context
8.2.58 ASCQM Release Lock After Use
8.2.46 ASCQM Singleton Creation without Proper Locking in Multi-Threaded Context

7.3.36 CWE-667 Improper Locking

Reference

Reference <https://cwe.mitre.org/data/definitions/667>

Roles

- the <Thread1>
- the <Thread2>
- the <SharedResourceAccess>
- the <Lock>

Parent weaknesses

CWE-662 Improper Synchronization

Detection Patterns

8.2.49 ASCQM Ban Incorrect Synchronization Mechanisms
8.2.41 ASCQM Ban Non-Final Static Data in Multi-Threaded Context
8.2.50 ASCQM Ban Resource Access without Proper Locking in Multi-Threaded Context
8.2.48 ASCQM Data Read and Write without Proper Locking in Multi-Threaded Context
8.2.46 ASCQM Singleton Creation without Proper Locking in Multi-Threaded Context

7.3.37 CWE-672 Operation on a Resource after Expiration or Release

Reference

<https://cwe.mitre.org/data/definitions/672>

Roles

- the <ResourceRelease>
- the <ResourceAccess>

Contributing weaknesses

CWE-415 Double Free
CWE-416 Use After Free

Detection Patterns

8.2.12 ASCQM Ban Double Release of Resource
8.2.11 ASCQM Ban Use of Expired Resource

7.3.38 CWE-681 Incorrect Conversion between Numeric Types

Reference

<https://cwe.mitre.org/data/definitions/681>

Roles

- the <NumericConversion>

Contributing weaknesses

CWE-194 Unexpected Sign Extension
CWE-195 Signed to Unsigned Conversion Error
CWE-196 Unsigned to Signed Conversion Error
CWE-197 Numeric Truncation Error

Detection Patterns

8.2.47 ASCQM Ban Incorrect Numeric Implicit Conversion

7.3.39 CWE-682 Incorrect Calculation

Reference

<https://cwe.mitre.org/data/definitions/682>

Roles

- the <Calculation>

Contributing weaknesses

CWE-131 Incorrect Calculation of Buffer Size
CWE-369 Divide by Zero

Detection Patterns

8.2.71 ASCQM Ban Buffer Size Computation Based on Array Element Pointer Size
8.2.70 ASCQM Ban Buffer Size Computation Based on Bitwise Logical Operation
8.2.72 ASCQM Ban Buffer Size Computation Based on Incorrect String Length Value
8.2.56 ASCQM Check and Handle ZERO Value before Use as Divisor

ISO/IEC 5055:2021(E)

7.3.40 CWE-703 Improper Check or Handling of Exceptional Conditions

Reference

<https://cwe.mitre.org/data/definitions/703>

Roles

- the <ErrorHandling>

Contributing weaknesses

CWE-166 Improper Handling of Missing Special Element
CWE-167 Improper Handling of Additional Special Element
CWE-168 Improper Handling of Inconsistent Special Elements
CWE-228 Improper Handling of Syntactically Invalid Structure
CWE-248 Uncaught Exception
CWE-280 Improper Handling of Insufficient Permissions or Privileges
CWE-391 Unchecked Error Condition
CWE-392 Missing Report of Error Condition
CWE-393 Return of Wrong Status Code
CWE-754 Improper Check for Unusual or Exceptional Conditions
CWE-755 Improper Handling of Exceptional Conditions

Detection Patterns

8.2.22 ASCQM Ban Useless Handling of Exceptions

7.3.41 CWE-704 Incorrect Type Conversion or Cast

Reference

<https://cwe.mitre.org/data/definitions/704>

Roles

- the <TypeConversion>

Contributing weaknesses

CWE-843 Access of Resource Using Incompatible Type ('Type Confusion')

Detection Patterns

8.2.51 ASCQM Ban Incorrect Type Conversion

7.3.42 CWE-758 Reliance on Undefined, Unspecified, or Implementation-Defined Behavior

Reference

<https://cwe.mitre.org/data/definitions/758>

Roles

- the <Statement>

Detection Patterns

8.2.15 ASCQM Ban Delete of VOID Pointer

8.2.17 ASCQM Ban Reading and Writing the Same Variable Used as Assignment Value

8.2.16 ASCQM Ban Variable Increment or Decrement Operation in Operations using the Same Variable

7.3.43 CWE-764 Multiple Locks of a Critical Resource

Reference

<https://cwe.mitre.org/data/definitions/764>

Roles

- the <Lock1>
- the <Lock2>
- the <Resource>

Parent weaknesses

CWE-662 Improper Synchronization

Detection Patterns

8.2.73 ASCQM Ban Sequential Acquisitions of Single Non-Reentrant Lock

7.3.44 CWE-772 Missing Release of Resource after Effective Lifetime

Reference

<https://cwe.mitre.org/data/definitions/772>

Roles

- the <ResourceAllocation>

Parent weaknesses

CWE-404 Improper Resource Shutdown or Release

Detection Patterns

8.2.37 ASCQM Release File Resource after Use in Operation

8.2.33 ASCQM Release Platform Resource after Use

8.2.30 ASCQM Release in Destructor Memory Allocated in Constructor

7.3.45 CWE-775 Missing Release of File Descriptor or Handle after Effective Lifetime

Reference

<https://cwe.mitre.org/data/definitions/775>

Roles

- the <FileDescriptorOrHandleAllocation>

Parent weaknesses

CWE-404 Improper Resource Shutdown or Release

ISO/IEC 5055:2021(E)

Detection Patterns

- 8.2.63 ASCQM Release File Resource after Use in Class
- 8.2.37 ASCQM Release File Resource after Use in Operation

7.3.46 CWE-786 Access of Memory Location Before Start of Buffer

Reference

<https://cwe.mitre.org/data/definitions/786>

Roles

- the <MemoryAccess>

Parent weaknesses

CWE-119 Improper Restriction of Operations within the Bounds of a Memory Buffer

Detection Patterns

- 8.2.1 ASCQM Check Index of Array Access
- 8.2.4 ASCQM Check Input of String Manipulation Primitives with Boundary Checking Capabilities

7.3.47 CWE-787 Out-of-bounds Write

Reference

<https://cwe.mitre.org/data/definitions/787>

Roles

- the <BufferWrite>

Parent weaknesses

CWE-119 Improper Restriction of Operations within the Bounds of a Memory Buffer

Detection Patterns

- 8.2.1 ASCQM Check Index of Array Access
- 8.2.2 ASCQM Check Input of Memory Manipulation Primitives

7.3.48 CWE-788 Access of Memory Location After End of Buffer

Reference

<https://cwe.mitre.org/data/definitions/788>

Roles

- the <MemoryAccess>

Parent weaknesses

CWE-119 Improper Restriction of Operations within the Bounds of a Memory Buffer

Detection Patterns

- 8.2.3 ASCQM Ban String Manipulation Primitives without Boundary Checking Capabilities
- 8.2.1 ASCQM Check Index of Array Access
- 8.2.2 ASCQM Check Input of Memory Manipulation Primitives

7.3.49 CWE-805 Buffer Access with Incorrect Length Value

Reference

<https://cwe.mitre.org/data/definitions/805>

Roles

- the <BufferAccess>
- the <LengthParameter>

Parent weaknesses

CWE-119 Improper Restriction of Operations within the Bounds of a Memory Buffer

Detection Patterns

- 8.2.3 ASCQM Ban String Manipulation Primitives without Boundary Checking Capabilities
- 8.2.2 ASCQM Check Input of Memory Manipulation Primitives
- 8.2.4 ASCQM Check Input of String Manipulation Primitives with Boundary Checking Capabilities

7.3.50 CWE-820 Missing Synchronization

Reference

<https://cwe.mitre.org/data/definitions/820>

Roles

- the <SharedResourceUse>

Parent weaknesses

CWE-662 Improper Synchronization

Detection Patterns

- 8.2.50 ASCQM Ban Resource Access without Proper Locking in Multi-Threaded Context

7.3.51 CWE-821 Incorrect Synchronization

Reference

<https://cwe.mitre.org/data/definitions/821>

Roles

- the <SharedResourceUse>
- the <IncorrectSynchronization>

Parent weaknesses

CWE-662 Improper Synchronization

Detection Patterns

- 8.2.49 ASCQM Ban Incorrect Synchronization Mechanisms

ISO/IEC 5055:2021(E)

7.3.52 7.3.52 CWE-822 Untrusted Pointer Dereference

Reference

<https://cwe.mitre.org/data/definitions/822>

Roles

- the <PointerDereferencing>
- the <TaintedInput>

Parent weaknesses

CWE-119 Improper Restriction of Operations within the Bounds of a Memory Buffer

Detection Patterns

8.2.8 ASCQM Sanitize User Input used as Pointer

7.3.53 7.3.53 CWE-823 Use of Out-of-range Pointer Offset

Reference

<https://cwe.mitre.org/data/definitions/823>

Roles

- the <PointerOffset>

Parent weaknesses

CWE-119 Improper Restriction of Operations within the Bounds of a Memory Buffer

Detection Patterns

8.2.7 ASCQM Check Offset used in Pointer Arithmetic

7.3.54 CWE-824 Access of Uninitialized Pointer

Reference

Reference <https://cwe.mitre.org/data/definitions/824>

Roles

Roles:

- the <PointerAccess>

Parent weaknesses

CWE-119 Improper Restriction of Operations within the Bounds of a Memory Buffer

Detection Patterns

8.2.9 ASCQM Initialize Pointers before Use

7.3.55 CWE-825 Expired Pointer Dereference

Reference

<https://cwe.mitre.org/data/definitions/825>

Roles

- the <PointerAccess>
- the <PointerRelease>

Parent weaknesses

CWE-672 Operation on a Resource after Expiration or Release

Detection Patterns

8.2.5 ASCQM Ban Use of Expired Pointer

7.3.56 CWE-833 Deadlock

Reference

<https://cwe.mitre.org/data/definitions/833>

Roles

- the <Thread1>
- the <Thread2>
- the <ConflictingLock>

Parent weaknesses

Weakness CWE-662 Improper Synchronization

Detection Patterns

8.2.68 ASCQM Ban Incompatible Lock Acquisition Sequences

8.2.69 ASCQM Ban Use of Thread Control Primitives with Known Deadlock Issues

7.3.57 CWE-835 Loop with Unreachable Exit Condition ('Infinite Loop')

Reference

<https://cwe.mitre.org/data/definitions/835>

Roles

- the <InfiniteLoop>

Detection Patterns

8.2.55 ASCQM Ban Unmodified Loop Variable Within Loop

8.2.54 ASCQM Ban While TRUE Loop Without Path To Break

ISO/IEC 5055:2021(E)

7.3.58 CWE-908 Use of Uninitialized Resource

Reference

<https://cwe.mitre.org/data/definitions/908>

Roles

- the <ResourceUse>

Detection Patterns

8.2.67 ASCQM Initialize Resource before Use

7.3.59 CWE-1083 Data Access from Outside Designated Data Manager Component

Usage name

Circumventing data access routines

Reference

<https://cwe.mitre.org/data/definitions/1083>

Roles

- the <DataManager>

- the <DataAccess>

Detection Patterns

8.2.44 ASCQM Ban Unintended Paths

7.3.60 CWE-1058 Invokable Control Element in Multi-Thread Context with non-Final Static Storable or Member Element

Usage name

Non-final static data in a multi-threaded environment

Reference

<https://cwe.mitre.org/data/definitions/1058>

Roles

- the <Operation>

- the <NonFinalStaticData>

Parent weaknesses

CWE-662 Improper Synchronization

Detection Patterns

8.2.41 ASCQM Ban Non-Final Static Data in Multi-Threaded Context

7.3.61 CWE-1096 Singleton Class Instance Creation without Proper Locking or Synchronization

Usage name

Improper locking of singleton classes

Reference

<https://cwe.mitre.org/data/definitions/1096>

Roles

- the <SingletonUse>

Parent weaknesses

CWE-662 Improper Synchronization

Detection Patterns

8.2.46 ASCQM Singleton Creation without Proper Locking in Multi-Threaded Context

7.3.62 CWE-1087 Class with Virtual Method without a Virtual Destructor

Usage name

Class with virtual method missing destructor

Reference

<https://cwe.mitre.org/data/definitions/1087>

Roles

- the <Class>
- the <VirtualMethod>

Detection Patterns

8.2.38 ASCQM Implement Virtual Destructor for Classes with Virtual Methods

7.3.63 CWE-1079 Parent Class without Virtual Destructor Method

Usage name

Parent class missing virtual destructor

Reference

<https://cwe.mitre.org/data/definitions/1079>

Roles

- the <ParentClass>

Detection Patterns

8.2.36 ASCQM Implement Virtual Destructor for Parent Classes

ISO/IEC 5055:2021(E)

7.3.64 CWE-1045 Parent Class with a Virtual Destructor and a Child Class without a Virtual Destructor

Usage name

Child class missing virtual destructor

Reference

<https://cwe.mitre.org/data/definitions/1045>

Roles

- the <ParentClass>
- the <ParentClassVirtualDestructor>
- the <ChildClass>

Detection Patterns

8.2.35 ASCQM Implement Virtual Destructor for Classes Derived from Class with Virtual Destructor

7.3.65 CWE-1051 Initialization with Hard-Coded Network Resource Configuration Data

Usage name

Hard-coded network resource information

Reference

<https://cwe.mitre.org/data/definitions/1051>

Roles

- the <NetworkResourceAccess>
- the <HardCodedValue>

Detection Patterns

8.2.43 ASCQM Ban Hard-Coded Literals used to Connect to Resource

7.3.66 CWE-1088 Synchronous Access of Remote Resource without Timeout

Usage name

Synchronous call with missing timeout

Reference

<https://cwe.mitre.org/data/definitions/1088>

Roles

- the <SynchronousCall>
- the <TimeOutOption>

Detection Patterns

8.2.40 ASCQM Manage Time-Out Mechanisms in Blocking Synchronous Calls

7.3.67 CWE-1066 Missing Serialization Control Element

Reference

<https://cwe.mitre.org/data/definitions/1066>

Roles

- the <SerializableData>

Detection Patterns

8.2.42 ASCQM Ban Non-Serializable Elements in Serializable Objects

7.3.68 CWE-1070 Serializable Storable Data Element with non-Serializable Item Elements

Reference

<https://cwe.mitre.org/data/definitions/1070>

Roles

- the <SerializableData>
- the <NonSerialibleChildData>

Detection Patterns

8.2.42 ASCQM Ban Non-Serializable Elements in Serializable Objects

7.3.69 CWE-1097 Persistent Storable Data Element without Associated Comparison Control Element

Usage name

Persistent data without proper comparison controls

Reference

<https://cwe.mitre.org/data/definitions/1097>

Roles

- the <PersistentData>

Parent weaknesses

CWE-595 Comparison of Object References Instead of Object Contents

Detection Patterns

8.2.28 ASCQM Implement Correct Object Comparison Operations

7.3.70 CWE-1098 Data Element containing Pointer Item without Proper Copy Control Element

Usage name

Improper copy capabilities for data pointers

ISO/IEC 5055:2021(E)

Reference

<https://cwe.mitre.org/data/definitions/1098>

Roles

- the <ParentData>
- the <PointerChildData>

Detection Patterns

8.2.13 ASCQM Implement Copy Constructor for Class With Pointer Resource

7.3.71 CWE-1082 Class Instance Self Destruction Control Element

Usage name

Self-destruction

Reference

<https://cwe.mitre.org/data/definitions/1082>

Roles

- the <SelfDestruction>

Detection Patterns

8.2.39 ASCQM Ban Self Destruction

7.3.72 CWE-1077 Floating Point Comparison with Incorrect Operator

Usage name

Improper equality comparisons of float-type numerical data

Reference

<https://cwe.mitre.org/data/definitions/1077>

Roles

- the <FloatNumberEqualityComparison>

Detection Patterns

8.2.45 ASCQM Ban Incorrect Float Number Comparison

7.3.73 CWE-665 Improper Initialization

Reference

<https://cwe.mitre.org/data/definitions/665>

Roles

- the <Initialization>

Contributing weaknesses

CWE-456 Missing Initialization of a Variable
CWE-457 Use of Uninitialized Variable

Detection Patterns

8.2.78 ASCQM Ban Self Assignment
8.2./9 ASCQM Initialize Pointers before Use
8.2.77 ASCQM Initialize Variables before Use

7.3.74 CWE-457 Use of Uninitialized Variable

Reference

<https://cwe.mitre.org/data/definitions/457>

Roles

- the <VariableDeclaration>
- the <VariableUse>

Parent weaknesses

CWE-665 Improper Initialization

Detection Patterns

8.2.75 ASCQM Ban Allocation of Memory with Null Size
8.2.74 ASCQM Initialize Variables

7.3.75 Reliability Detection Patterns

Detection Patterns

8.2.75 ASCQM Ban Allocation of Memory with Null Size
8.2.24 ASCQM Ban Assignment Operation Inside Logic Blocks
8.2.71 ASCQM Ban Buffer Size Computation Based on Array Element Pointer Size
8.2.70 ASCQM Ban Buffer Size Computation Based on Bitwise Logical Operation
8.2.72 ASCQM Ban Buffer Size Computation Based on Incorrect String Length Value
8.2.29 ASCQM Ban Comma Operator from Delete Statement
8.2.25 ASCQM Ban Comparison Expression Outside Logic Blocks
8.2.64 ASCQM Use Break in Switch Statement
8.2.62 ASCQM NULL Terminate Output Of String Manipulation Primitives
8.2.61 ASCQM Ban Creation of Lock on Inappropriate Object Type
8.2.60 ASCQM Ban Creation of Lock on Non-Final Object
8.2.57 ASCQM Ban Creation of Lock on Private Non-Static Object to Access Private Static Data
8.2.15 ASCQM Ban Delete of VOID Pointer
8.2.76 ASCQM Ban Double Free on Pointers
8.2.12 ASCQM Ban Double Release of Resource
8.2.66 ASCQM Ban Empty Exception Block
8.2.14 ASCQM Ban Free Operation on Pointer Received as Parameter
8.2.43 ASCQM Ban Hard-Coded Literals used to Connect to Resource
8.2.68 ASCQM Ban Incompatible Lock Acquisition Sequences
8.2.45 ASCQM Ban Incorrect Float Number Comparison
8.2.19 ASCQM Ban Incorrect Numeric Conversion of Return Value
8.2.47 ASCQM Ban Incorrect Numeric Implicit Conversion
8.2.23 ASCQM Ban Incorrect Object Comparison

ISO/IEC 5055:2021(E)

- 8.2.26 ASCQM Ban Incorrect String Comparison
- 8.2.49 ASCQM Ban Incorrect Synchronization Mechanisms
- 8.2.51 ASCQM Ban Incorrect Type Conversion
- 8.2.6 ASCQM Ban Input Acquisition Primitives without Boundary Checking Capabilities
- 8.2.27 ASCQM Ban Logical Operation with a Constant Operand
- 8.2.41 ASCQM Ban Non-Final Static Data in Multi-Threaded Context
- 8.2.42 ASCQM Ban Non-Serializable Elements in Serializable Objects
- 8.2.17 ASCQM Ban Reading and Writing the Same Variable Used as Assignment Value
- 8.2.50 ASCQM Ban Resource Access without Proper Locking in Multi-Threaded Context
- 8.2.52 ASCQM Ban Return of Local Variable Address
- 8.2.39 ASCQM Ban Self Destruction
- 8.2.73 ASCQM Ban Sequential Acquisitions of Single Non-Reentrant Lock
- 8.2.59 ASCQM Ban Sleep Between Lock Acquisition and Release
- 8.2.53 ASCQM Ban Storage of Local Variable Address in Global Variable
- 8.2.3 ASCQM Ban String Manipulation Primitives without Boundary Checking Capabilities
- 8.2.44 ASCQM Ban Unintended Paths
- 8.2.55 ASCQM Ban Unmodified Loop Variable Within Loop
- 8.2.5 ASCQM Ban Use of Expired Pointer
- 8.2.11 ASCQM Ban Use of Expired Resource
- 8.2.69 ASCQM Ban Use of Thread Control Primitives with Known Deadlock Issues
- 8.2.22 ASCQM Ban Useless Handling of Exceptions
- 8.2.16 ASCQM Ban Variable Increment or Decrement Operation in Operations using the Same Variable
- 8.2.54 ASCQM Ban While TRUE Loop Without Path to Break
- 8.2.65 ASCQM Catch Exceptions
- 8.2.67 ASCQM Initialize Resource before Use
- 8.2.40 ASCQM Manage Time-Out Mechanisms in Blocking Synchronous Calls
- 8.2.1 ASCQM Check Index of Array Access
- 8.2.2 ASCQM Check Input of Memory Manipulation Primitives
- 8.2.4 ASCQM Check Input of String Manipulation Primitives with Boundary Checking Capabilities
- 8.2.10 ASCQM Check NULL Pointer Value before Use
- 8.2.7 ASCQM Check Offset used in Pointer Arithmetic
- 8.2.21 ASCQM Check Return Value of Resource Operations Immediately
- 8.2.56 ASCQM Check and Handle ZERO Value before Use as Divisor
- 8.2.48 ASCQM Data Read and Write without Proper Locking in Multi-Threaded Context
- 8.2.20 ASCQM Handle Return Value of Must Check Operations
- 8.2.18 ASCQM Handle Return Value of Resource Operations
- 8.2.13 ASCQM Implement Copy Constructor for Class With Pointer Resource
- 8.2.28 ASCQM Implement Correct Object Comparison Operations

7.4 Weakness Category Security

7.4.1 Improper Restriction of Operations within the Bounds of a Memory Buffer

Reference

<https://cwe.mitre.org/data/definitions/119>

Roles

- the <BufferOperation>

Contributing weaknesses

CWE-120 Buffer Copy without Checking Size of Input ('Classic Buffer Overflow')
CWE-123 Write-what-where Condition
CWE-125 Out-of-bounds Read
CWE-130 Improper Handling of Length Parameter Inconsistency
CWE-786 Access of Memory Location Before Start of Buffer
CWE-787 Out-of-bounds Write
CWE-788 Access of Memory Location After End of Buffer
CWE-805 Buffer Access with Incorrect Length Value
CWE-822 Untrusted Pointer Dereference
CWE-823 Use of Out-of-range Pointer Offset
CWE-824 Access of Uninitialized Pointer
CWE-825 Expired Pointer Dereference

Detection Patterns

8.2.6 ASCQM Ban Input Acquisition Primitives without Boundary Checking Capabilities
8.2.3 ASCQM Ban String Manipulation Primitives without Boundary Checking Capabilities
8.2.5 ASCQM Ban Use of Expired Pointer
8.2.1 ASCQM Check Index of Array Access
8.2.2 ASCQM Check Input of Memory Manipulation Primitives
8.2.4 ASCQM Check Input of String Manipulation Primitives with Boundary Checking Capabilities
8.2.7 ASCQM Check Offset used in Pointer Arithmetic
8.2.9 ASCQM Initialize Pointers before Use
8.2.8 ASCQM Sanitize User Input used as Pointer

7.4.2 CWE-120 Buffer Copy without Checking Size of Input ('Classic Buffer Overflow')

Reference

<https://cwe.mitre.org/data/definitions/120>

Roles

- the <BufferCopy>

Parent weaknesses

CWE-119 Improper Restriction of Operations within the Bounds of a Memory Buffer

Detection Patterns

8.2.6 ASCQM Ban Input Acquisition Primitives without Boundary Checking Capabilities
8.2.3 ASCQM Ban String Manipulation Primitives without Boundary Checking Capabilities

7.4.3 CWE-123 Write-what-where Condition

Reference

<https://cwe.mitre.org/data/definitions/123>

Roles

- the <BufferWrite>

Parent weaknesses

CWE-119 Improper Restriction of Operations within the Bounds of a Memory Buffer

ISO/IEC 5055:2021(E)

Detection Patterns

8.2.3 ASCQM Ban String Manipulation Primitives without Boundary Checking Capabilities

7.4.4 CWE-125 Out-of-bounds Read

Reference

<https://cwe.mitre.org/data/definitions/125>

Roles

- the <BufferRead>

Parent weaknesses

CWE-119 Improper Restriction of Operations within the Bounds of a Memory Buffer

Detection Patterns

8.2.1 ASCQM Check Index of Array Access

7.4.5 CWE-129 Improper Validation of Array Index

Reference

<https://cwe.mitre.org/data/definitions/129>

Roles

- the <ArrayAccess>
- the <TaintedIndex>

Detection Patterns

8.2.94 ASCQM Sanitize User Input used as Array Index

7.4.6 CWE-130 Improper Handling of Length Parameter Inconsistency

Reference

<https://cwe.mitre.org/data/definitions/130>

Roles

- the <DataHandling>
- the <LengthParameter>

Parent weaknesses

CWE-119 Improper Restriction of Operations within the Bounds of a Memory Buffer

Detection Patterns

8.2.1 ASCQM Check Index of Array Access

7.4.7 CWE-131 Incorrect Calculation of Buffer Size

Reference

Reference <https://cwe.mitre.org/data/definitions/131>

Roles

- the <BufferSizeCalculation>

Parent weaknesses

CWE-682 Incorrect Calculation

Detection Patterns

8.2.71 ASCQM Ban Buffer Size Computation Based on Array Element Pointer Size

8.2.70 ASCQM Ban Buffer Size Computation Based on Bitwise Logical Operation

8.2.72 ASCQM Ban Buffer Size Computation Based on Incorrect String Length Value

7.4.8 CWE-134 Use of Externally-Controlled Format String

Reference

<https://cwe.mitre.org/data/definitions/134>

Roles

- the <Formatting>

- the <TaintedFormatString>

Detection Patterns

8.2.96 ASCQM Sanitize User Input used as String Format

7.4.9 CWE-194 Unexpected Sign Extension

Reference

<https://cwe.mitre.org/data/definitions/194>

Roles

- the <NumberSignExtension>

Parent weaknesses

CWE-681 Incorrect Conversion between Numeric Types

Detection Patterns

8.2.47 ASCQM Ban Incorrect Numeric Implicit Conversion

7.4.10 CWE-195 Signed to Unsigned Conversion Error

Reference

<https://cwe.mitre.org/data/definitions/195>

ISO/IEC 5055:2021(E)

Roles

- the <NumberConversionToUnsigned>

Parent weaknesses

CWE-681 Incorrect Conversion between Numeric Types

Detection Patterns

8.2.47 ASCQM Ban Incorrect Numeric Implicit Conversion

7.4.11 CWE-196 Unsigned to Signed Conversion Error

Reference

<https://cwe.mitre.org/data/definitions/196>

Roles

- the <NumberConversionToSigned>

Parent weaknesses

CWE-681 Incorrect Conversion between Numeric Types

Detection Patterns

8.2.47 ASCQM Ban Incorrect Numeric Implicit Conversion

7.4.12 CWE-197 Numeric Truncation Error

Reference

<https://cwe.mitre.org/data/definitions/197>

Roles

- the <NumberTruncation>

Parent weaknesses

CWE-681 Incorrect Conversion between Numeric Types

Detection Patterns

8.2.47 ASCQM Ban Incorrect Numeric Implicit Conversion

7.4.13 CWE-22 Improper Limitation of a Pathname to a Restricted Directory ('Path Traversal')

Reference

<https://cwe.mitre.org/data/definitions/22>

Roles

- the <PathManipulationStatement>
- the <TaintedInput>

Contributing weaknesses

CWE-23 Relative Path Traversal
CWE-36 Absolute Path Traversal

Detection Patterns

8.2.85 ASCQM Sanitize User Input used in Path Manipulation

7.4.14 CWE-23 Relative Path Traversal

Reference

<https://cwe.mitre.org/data/definitions/23>

Roles

- the <PathManipulation>
- the <TaintedInput>

Parent weaknesses

CWE-22 Improper Limitation of a Pathname to a Restricted Directory ('Path Traversal')

Detection Patterns

8.2.85 ASCQM Sanitize User Input used in Path Manipulation

7.4.15 CWE-252 Unchecked Return Value

Reference

<https://cwe.mitre.org/data/definitions/252>

Roles

- the <OperationCall>

Detection Patterns

8.2.21 ASCQM Check Return Value of Resource Operations Immediately

8.2.20 ASCQM Handle Return Value of Must Check Operations

7.4.16 CWE-259 Use of Hard-coded Password

Reference

<https://cwe.mitre.org/data/definitions/259>

Roles

- the <Authentication>
- the <HardCodedValue>

Parent weaknesses

CWE-798 Use of Hard-coded Credentials

ISO/IEC 5055:2021(E)

Detection Patterns

8.2.43 ASCQM Ban Hard-Coded Literals used to Connect to Resource

7.4.17 CWE-321 Use of Hard-coded Cryptographic Key

Reference

<https://cwe.mitre.org/data/definitions/321>

Roles

- the <Authentication>
- the <HardCodedCryptographicKey>

Parent weaknesses

CWE-798 Use of Hard-coded Credentials

Detection Patterns

8.2.43 ASCQM Ban Hard-Coded Literals used to Connect to Resource

7.4.18 CWE-36 Absolute Path Traversal

Reference

<https://cwe.mitre.org/data/definitions/36>

Roles

- the <PathManipulation>
- the <TaintedInput>

Parent weaknesses

CWE-22 Improper Limitation of a Pathname to a Restricted Directory ('Path Traversal')

Detection Patterns

8.2.85 ASCQM Sanitize User Input used in Path Manipulation

7.4.19 CWE-366 Race Condition within a Thread

Reference

<https://cwe.mitre.org/data/definitions/366>

Roles

- the <Thread1>
- the <Thread2>
- the <ConflictingResource>

Parent weaknesses

CWE-662 Improper Synchronization

Detection Patterns

- 8.2.57 ASCQM Ban Creation of Lock On Private Non-Static Object to Access Private Static Data
- 8.2.48 ASCQM Data Read and Write without Proper Locking in Multi-Threaded Context

7.4.20 CWE-369 Divide by Zero

Reference

<https://cwe.mitre.org/data/definitions/369>

Roles

- the <Division>

Parent weaknesses

CWE-682 Incorrect Calculation

Detection Patterns

- 8.2.56 ASCQM Check and Handle ZERO Value before Use as Divisor

7.4.21 CWE-401 Improper Release of Memory Before Removing Last Reference ('Memory Leak')

Reference

<https://cwe.mitre.org/data/definitions/401>

Roles

- the <MemoryAllocation>

Parent weaknesses

CWE-404 Improper Resource Shutdown or Release

Detection Patterns

- 8.2.29 ASCQM Ban Comma Operator from Delete Statement
- 8.2.32 ASCQM Implement Required Operations for Manual Resource Management
- 8.2.34 ASCQM Release Memory After Use
- 8.2.31 ASCQM Release Memory after Use with Correct Operation
- 8.2.33 ASCQM Release Platform Resource after Use
- 8.2.30 ASCQM Release in Destructor Memory Allocated in Constructor

7.4.22 CWE-404 Improper Resource Shutdown or Release

Reference

<https://cwe.mitre.org/data/definitions/404>

Roles

- the <ResourceAllocation>

ISO/IEC 5055:2021(E)

Contributing weaknesses

CWE-401 Improper Release of Memory Before Removing Last Reference ('Memory Leak')

CWE-772 Missing Release of Resource after Effective Lifetime

CWE-775 Missing Release of File Descriptor or Handle after Effective Lifetime

Detection Patterns

8.2.29 ASCQM Ban Comma Operator from Delete Statement

8.2.35 ASCQM Implement Virtual Destructor for Classes Derived from Class with Virtual Destructor

8.2.38 ASCQM Implement Virtual Destructor for Classes with Virtual Methods

8.2.36 ASCQM Implement Virtual Destructor for Parent Classes

8.2.37 ASCQM Release File Resource after Use in Operation

8.2.33 ASCQM Release Platform Resource after Use

8.2.30 ASCQM Release in Destructor Memory Allocated in Constructor

7.4.23 CWE-424 Improper Protection of Alternate Path

Reference

<https://cwe.mitre.org/data/definitions/424>

Roles

- the <AlternatePath>

Detection Patterns

8.2.44 ASCQM Ban Unintended Paths

7.4.24 CWE-434 Unrestricted Upload of File with Dangerous Type

Reference

<https://cwe.mitre.org/data/definitions/434>

Roles

- the <FileUpload>

Detection Patterns

8.2.85 ASCQM Sanitize User Input used in Path Manipulation

7.4.25 CWE-456 Missing Initialization of a Variable

Reference

<https://cwe.mitre.org/data/definitions/456>

Roles

- the <VariableDeclaration>

Parent weaknesses

CWE-665 Improper Initialization

Detection Patterns

- 8.2.75 ASCQM Ban Allocation of Memory with Null Size
- 8.2.74 ASCQM Initialize Variables

7.4.26 CWE-457 Use of Uninitialized Variable

Reference

<https://cwe.mitre.org/data/definitions/457>

Roles

- the <VariableDeclaration>
- the <VariableUse>

Parent weaknesses

CWE-665 Improper Initialization

Detection Patterns

- 8.2.75 ASCQM Ban Allocation of Memory with Null Size
- 8.2.74 ASCQM Initialize Variables

7.4.27 CWE-477 Use of Obsolete Function

Reference

<https://cwe.mitre.org/data/definitions/477>

Roles

- the <ObsoleteFunctionCall>

Detection Patterns

- 8.2.93 ASCQM Ban Use of Deprecated Libraries

7.4.28 CWE-480 Use of Incorrect Operator

Reference

<https://cwe.mitre.org/data/definitions/480>

Roles

- the <Operator>

Detection Patterns

- 8.2.24 ASCQM Ban Assignment Operation Inside Logic Blocks
- 8.2.25 ASCQM Ban Comparison Expression Outside Logic Blocks
- 8.2.23 ASCQM Ban Incorrect Object Comparison
- 8.2.26 ASCQM Ban Incorrect String Comparison
- 8.2.27 ASCQM Ban Logical Operation with a Constant Operand

ISO/IEC 5055:2021(E)

7.4.29 CWE-502 Deserialization of Untrusted Data

Reference

<https://cwe.mitre.org/data/definitions/502>

Roles

- the <Deserialization>
- the <TaintedData>

Detection Patterns

8.2.98 ASCQM Sanitize User Input used as Serialized Object

7.4.30 CWE-543 Use of Singleton Pattern Without Synchronization in a Multithreaded Context

Reference

<https://cwe.mitre.org/data/definitions/543>

Roles

- the <SingletonUse>

Parent weaknesses

CWE-662 Improper Synchronization

Detection Patterns

8.2.41 ASCQM Ban Non-Final Static Data in Multi-Threaded Context

8.2.46 ASCQM Singleton Creation without Proper Locking in Multi-Threaded Context

7.4.31 CWE-564 SQL Injection: Hibernate

Reference

<https://cwe.mitre.org/data/definitions/564>

Roles

- the <HibernateSQLStatement>
- the <TaintedInput>

Parent weaknesses

CWE-89 Improper Neutralization of Special Elements used in an SQL Command ('SQL Injection')

Detection Patterns

8.2.86 ASCQM Sanitize User Input used in SQL Access

7.4.32 CWE-567 Unsynchronized Access to Shared Data in a Multithreaded Context

Reference

<https://cwe.mitre.org/data/definitions/567>

Roles

- the <SharedDataAccess>

Parent weaknesses

CWE-662 Improper Synchronization

Detection Patterns

8.2.41 ASCQM Ban Non-Final Static Data in Multi-Threaded Context

8.2.48 ASCQM Data Read and Write without Proper Locking in Multi-Threaded Context

7.4.33 CWE-570 Expression is Always False

Reference

<https://cwe.mitre.org/data/definitions/570>

Roles

- the <BooleanExpression>

Detection Patterns

8.2.79 ASCQM Check Boolean Variables are Updated in Different Conditional Branches before Use

7.4.34 CWE-571 Expression is Always True

Reference

<https://cwe.mitre.org/data/definitions/571>

Roles

- the <BooleanExpression>

Detection Patterns

8.2.79 ASCQM Check Boolean Variables are Updated in Different Conditional Branches before Use

7.4.35 CWE-606 Unchecked Input for Loop Condition

Reference

<https://cwe.mitre.org/data/definitions/606>

Roles

- the <LoopCondition>

- the <TaintedValue>

Detection Patterns

8.2.97 ASCQM Sanitize User Input used in Loop Condition

ISO/IEC 5055:2021(E)

7.4.36 CWE-643 Improper Neutralization of Data within XPath Expressions ('XPath Injection')

Reference

<https://cwe.mitre.org/data/definitions/643>

Roles

- the <XPathExpression>
- the <TaintedValue>

Detection Patterns

8.2.88 ASCQM Sanitize User Input used in Document Navigation Expression

7.4.37 CWE-652 Improper Neutralization of Data within XQuery Expressions ('XQuery Injection')

Reference

<https://cwe.mitre.org/data/definitions/652>

Roles

- the <XQueryExpression>
- the <TaintedValue>

Detection Patterns

8.2.87 ASCQM Sanitize User Input used in Document Manipulation Expression

7.4.38 CWE-662 Improper Synchronization

Reference

<https://cwe.mitre.org/data/definitions/662>

Roles

- the <Thread1>
- the <Thread2>
- the <SharedResourceAccess>

Contributing weaknesses

CWE-366 Race Condition within a Thread

CWE-543 Use of Singleton Pattern Without Synchronization in a Multithreaded Context

CWE-567 Unsynchronized Access to Shared Data in a Multithreaded Context

CWE-667 Improper Locking

CWE-764 Multiple Locks of a Critical Resource

CWE-820 Missing Synchronization

CWE-821 Incorrect Synchronization

CWE-833 Deadlock

CWE-1058 Invokable Control Element in Multi-Thread Context with non-Final Static Storable or Member Element

CWE-1096 Singleton Class Instance Creation without Proper Locking or Synchronization

Detection Patterns

- 8.2.61 ASCQM Ban Creation of Lock On Inappropriate Object Type
- 8.2.60 ASCQM Ban Creation of Lock On Non-Final Object
- 8.2.57 ASCQM Ban Creation of Lock On Private Non-Static Object to Access Private Static Data
- 8.2.68 ASCQM Ban Incompatible Lock Acquisition Sequences
- 8.2.49 ASCQM Ban Incorrect Synchronization Mechanisms
- 8.2.41 ASCQM Ban Non-Final Static Data in Multi-Threaded Context
- 8.2.50 ASCQM Ban Resource Access without Proper Locking in Multi-Threaded Context
- 8.2.73 ASCQM Ban Sequential Acquisitions of Single Non-Reentrant Lock
- 8.2.59 ASCQM Ban Sleep Between Lock Acquisition and Release
- 8.2.69 ASCQM Ban Use of Thread Control Primitives with Known Deadlock Issues
- 8.2.48 ASCQM Data Read and Write without Proper Locking in Multi-Threaded Context
- 8.2.58 ASCQM Release Lock After Use
- 8.2.46 ASCQM Singleton Creation without Proper Locking in Multi-Threaded Context

7.4.39 CWE-665 Improper Initialization

Reference

<https://cwe.mitre.org/data/definitions/665>

Roles

- the <Initialization>

Contributing weaknesses

- CWE-456 Missing Initialization of a Variable
- CWE-457 Use of Uninitialized Variable

Detection Patterns

- 8.2.78 ASCQM Ban Self Assignment
- 8.2.9 ASCQM Initialize Pointers before Use
- 8.2.77 ASCQM Initialize Variables before Use

7.4.40 CWE-667 Improper Locking

Reference

<https://cwe.mitre.org/data/definitions/667>

Roles

- the <Thread1>
- the <Thread2>
- the <SharedResourceAccess>
- the <Lock>

Parent weaknesses

- CWE-662 Improper Synchronization

Detection Patterns

- 8.2.61 ASCQM Ban Creation of Lock On Inappropriate Object Type
- 8.2.60 ASCQM Ban Creation of Lock On Non-Final Object
- 8.2.57 ASCQM Ban Creation of Lock On Private Non-Static Object to Access Private Static Data

ISO/IEC 5055:2021(E)

- 8.2.50 ASCQM Ban Resource Access without Proper Locking in Multi-Threaded Context
- 8.2.59 ASCQM Ban Sleep Between Lock Acquisition and Release
- 8.2.48 ASCQM Data Read and Write without Proper Locking in Multi-Threaded Context
- 8.2.58 ASCQM Release Lock After Use

7.4.41 CWE-672 Operation on a Resource after Expiration or Release

Reference

<https://cwe.mitre.org/data/definitions/672>

Roles

- the <ResourceRelease>
- the <ResourceAccess>

Contributing weaknesses

- CWE-415 Double Free
- CWE-416 Use After Free

Detection Patterns

- 8.2.12 ASCQM Ban Double Release of Resource
- 8.2.11 ASCQM Ban Use of Expired Resource

7.4.42 CWE-681 Incorrect Conversion between Numeric Types

Reference

<https://cwe.mitre.org/data/definitions/681>

Roles

- the <NumericConversion>

Contributing weaknesses

- CWE-194 Unexpected Sign Extension
- CWE-195 Signed to Unsigned Conversion Error
- CWE-196 Unsigned to Signed Conversion Error
- CWE-197 Numeric Truncation Error

Detection Patterns

- 8.2.47 ASCQM Ban Incorrect Numeric Implicit Conversion

7.4.43 CWE-682 Incorrect Calculation

Reference

<https://cwe.mitre.org/data/definitions/682>

Roles

- the <Calculation>

Contributing weaknesses

CWE-131 Incorrect Calculation of Buffer Size
CWE-369 Divide by Zero

Detection Patterns

8.2.71 ASCQM Ban Buffer Size Computation Based on Array Element Pointer Size
8.2.70 ASCQM Ban Buffer Size Computation Based on Bitwise Logical Operation
8.2.72 ASCQM Ban Buffer Size Computation Based on Incorrect String Length Value
8.2.56 ASCQM Check and Handle ZERO Value before Use as Divisor

7.4.44 CWE-732 Incorrect Permission Assignment for Critical Resource

Reference

<https://cwe.mitre.org/data/definitions/732>

Roles

- the <PermissionAssignment>

Detection Patterns

8.2.100 ASCQM Ban File Creation with Default Permissions

7.4.45 CWE-77 Improper Neutralization of Special Elements used in a Command ('Command Injection')

Reference

<https://cwe.mitre.org/data/definitions/77>

Roles

- the <Command>
- the <TaintedValue>

Contributing weaknesses

CWE-78 Improper Neutralization of Special Elements used in an OS Command ('OS Command Injection')
CWE-88 Argument Injection or Modification

Detection Patterns

8.2.128 ASCQM Sanitize User Input used in Expression Language Statement
8.2.92 ASCQM Sanitize User Input used in System Command

7.4.46 CWE-772 Missing Release of Resource after Effective Lifetime

Reference

<https://cwe.mitre.org/data/definitions/772>

Roles

- the <ResourceAllocation>

ISO/IEC 5055:2021(E)

Parent weaknesses

CWE-404 Improper Resource Shutdown or Release

Detection Patterns

- 8.2.37 ASCQM Release File Resource after Use in Operation
- 8.2.33 ASCQM Release Platform Resource after Use
- 8.2.30 ASCQM Release in Destructor Memory Allocated in Constructor

7.4.47 CWE-775 Missing Release of File Descriptor or Handle after Effective Lifetime

Reference

<https://cwe.mitre.org/data/definitions/775>

Roles

- the <FileDescriptorOrHandleAllocation>

Parent weaknesses

CWE-775 Missing Release of File Descriptor or Handle after Effective Lifetime

Detection Patterns

- 8.2.63 ASCQM Release File Resource after Use in Class
- 8.2.37 ASCQM Release File Resource after Use in Operation

7.4.48 CWE-778 Insufficient Logging

Reference

<https://cwe.mitre.org/data/definitions/778>

Roles

- the <SecurityExceptionOrError>

Detection Patterns

- 8.2.99 ASCQM Log Caught Security Exceptions

7.4.49 CWE-78 Improper Neutralization of Special Elements used in an OS Command ('OS Command Injection')

Reference

<https://cwe.mitre.org/data/definitions/78>

Roles

- the <OSCommand>
- the <TaintedValue>

Parent weaknesses

CWE-77 Improper Neutralization of Special Elements used in a Command ('Command Injection')

Detection Patterns

8.2.92 ASCQM Sanitize User Input used in System Command

7.4.50 CWE-783 Operator Precedence Logic Error

Reference

<https://cwe.mitre.org/data/definitions/783>

Roles

- the <Formula>

Detection Patterns

8.2.82 ASCQM Ban Incorrect Joint Comparison

8.2.81 ASCQM Ban Not Operator On Non-Boolean Operand Of Comparison Operation

8.2.80 ASCQM Ban Not Operator On Operand Of Bitwise Operation

7.4.51 CWE-786 Access of Memory Location Before Start of Buffer

Reference

<https://cwe.mitre.org/data/definitions/786>

Roles

- the <MemoryAccess>

Parent weaknesses

CWE-119 Improper Restriction of Operations within the Bounds of a Memory Buffer

Detection Patterns

8.2.1 ASCQM Check Index of Array Access

8.2.4 ASCQM Check Input of String Manipulation Primitives with Boundary Checking Capabilities

7.4.52 CWE-787 Out-of-bounds Write

Reference

<https://cwe.mitre.org/data/definitions/787>

Roles

- the <BufferWrite>

Parent weaknesses

CWE-119 Improper Restriction of Operations within the Bounds of a Memory Buffer

Detection Patterns

8.2.1 ASCQM Check Index of Array Access

8.2.2 ASCQM Check Input of Memory Manipulation Primitives

ISO/IEC 5055:2021(E)

7.4.53 CWE-788 Access of Memory Location After End of Buffer

Reference

<https://cwe.mitre.org/data/definitions/788>

Roles

- the <MemoryAccess>

Parent weaknesses

CWE-119 Improper Restriction of Operations within the Bounds of a Memory Buffer

Detection Patterns

- 8.2.3 ASCQM Ban String Manipulation Primitives without Boundary Checking Capabilities
- 8.2.1 ASCQM Check Index of Array Access
- 8.2.2 ASCQM Check Input of Memory Manipulation Primitives

7.4.54 CWE-789 Uncontrolled Memory Allocation

Reference

<https://cwe.mitre.org/data/definitions/789>

Roles

- the <MemoryAllocation>

Detection Patterns

- 8.2.95 ASCQM Check Input of Memory Allocation Primitives
- 8.2.94 ASCQM Sanitize User Input used as Array Index

7.4.55 CWE-79 Improper Neutralization of Input During Web Page Generation ('Cross-site Scripting')

Reference

<https://cwe.mitre.org/data/definitions/79>

Roles

- the <WebPageGenerationStatement>
- the <TaintedInput>

Detection Patterns

- 8.2.90 ASCQM Sanitize Stored Input used in User Output
- 8.2.91 ASCQM Sanitize User Input used in User Output

7.4.56 CWE-798 Use of Hard-coded Credentials

Reference

<https://cwe.mitre.org/data/definitions/798>

Roles

- the <HardCodedValue>
- the <Authentication>

Contributing weaknesses

CWE-259 Use of Hard-coded Password

CWE-321 Use of Hard-coded Cryptographic Key

Detection Patterns

8.2.43 ASCQM Ban Hard-Coded Literals used to Connect to Resource

7.4.57 CWE-805 Buffer Access with Incorrect Length Value

Reference

<https://cwe.mitre.org/data/definitions/805>

Roles

- the <BufferAccess>
- the <LengthParameter>

Parent weaknesses

CWE-119 Improper Restriction of Operations within the Bounds of a Memory Buffer

Detection Patterns

8.2.3 ASCQM Ban String Manipulation Primitives without Boundary Checking Capabilities

8.2.2 ASCQM Check Input of Memory Manipulation Primitives

8.2.4 ASCQM Check Input of String Manipulation Primitives with Boundary Checking Capabilities

7.4.58 CWE-820 Missing Synchronization

Reference

<https://cwe.mitre.org/data/definitions/820>

Roles

- the <SharedResourceUse>

Parent weaknesses

CWE-662 Improper Synchronization

Detection Patterns

8.2.50 ASCQM Ban Resource Access without Proper Locking in Multi-Threaded Context

ISO/IEC 5055:2021(E)

7.4.59 CWE-821 Incorrect Synchronization

Reference

<https://cwe.mitre.org/data/definitions/821>

Roles

- the <SharedResourceUse>
- the <IncorrectSynchronization>

Parent weaknesses

CWE-662 Improper Synchronization

Detection Patterns

8.2.49 ASCQM Ban Incorrect Synchronization Mechanisms

7.4.60 CWE-822 Untrusted Pointer Dereference

Reference

<https://cwe.mitre.org/data/definitions/822>

Roles

- the <PointerDereferencing>
- the <TaintedInput>

Parent weaknesses

CWE-119 Improper Restriction of Operations within the Bounds of a Memory Buffer

Detection Patterns

8.2.8 ASCQM Sanitize User Input used as Pointer

7.4.61 CWE-823 Use of Out-of-range Pointer Offset

Reference

<https://cwe.mitre.org/data/definitions/823>

Roles

- the <PointerOffset>

Parent weaknesses

CWE-119 Improper Restriction of Operations within the Bounds of a Memory Buffer

Detection Patterns

8.2.7 ASCQM Check Offset used in Pointer Arithmetic

7.4.62 CWE-824 Access of Uninitialized Pointer

Reference

<https://cwe.mitre.org/data/definitions/824>

Roles

- the <PointerAccess>

Parent weaknesses

CWE-119 Improper Restriction of Operations within the Bounds of a Memory Buffer

Detection Patterns

8.2.9 ASCQM Initialize Pointers before Use

7.4.63 CWE-825 Expired Pointer Dereference

Reference

<https://cwe.mitre.org/data/definitions/825>

Roles

- the <PointerAccess>
- the <PointerRelease>

Parent weaknesses

CWE-672 Operation on a Resource after Expiration or Release

Detection Patterns

8.2.5 ASCQM Ban Use of Expired Pointer

7.4.64 CWE-835 Loop with Unreachable Exit Condition ('Infinite Loop')

Reference

<https://cwe.mitre.org/data/definitions/835>

Roles

- the <InfiniteLoop>

Detection Patterns

8.2.55 ASCQM Ban Unmodified Loop Variable Within Loop
8.2.54 ASCQM Ban While TRUE Loop Without Path To Break

7.4.65 CWE-88 Argument Injection or Modification

Reference

<https://cwe.mitre.org/data/definitions/88>

ISO/IEC 5055:2021(E)

Roles

- the <Command>
- the <TaintedInput>

Parent weaknesses

CWE-77 Improper Neutralization of Special Elements used in a Command ('Command Injection')

Detection Patterns

8.2.92 ASCQM Sanitize User Input used in System Command

7.4.66 CWE-89 Improper Neutralization of Special Elements used in an SQL Command ('SQL Injection')

Reference

<https://cwe.mitre.org/data/definitions/89>

Roles

- the <SQLStatement>
- the <TaintedInput>

Contributing weaknesses

Weakness CWE-564 SQL Injection: Hibernate

Detection Patterns

8.2.87 ASCQM Sanitize User Input used in Document Manipulation Expression

8.2.88 ASCQM Sanitize User Input used in Document Navigation Expression

7.4.67 CWE-90 Improper Neutralization of Special Elements used in an LDAP Query ('LDAP Injection')

Reference

<https://cwe.mitre.org/data/definitions/90>

Roles

- the <LDAPQuery>
- the <TaintedInput>

Detection Patterns

8.2.89 ASCQM Sanitize User Input used to access Directory Resources

7.4.68 CWE-91 XML Injection (aka Blind XPath Injection)

Reference

<https://cwe.mitre.org/data/definitions/91>

Roles

- the <XMLHandlingExpression>
- the <TaintedValue>

Detection Patterns

- 8.2.87 ASCQM Sanitize User Input used in Document Manipulation Expression
- 8.2.88 ASCQM Sanitize User Input used in Document Navigation Expression

7.4.69 CWE-99 Improper Control of Resource Identifiers ('Resource Injection')

Reference

<https://cwe.mitre.org/data/definitions/99>

Roles

- the <ResourceIdentifier>
- the <TaintedValue>

Detection Patterns

- 8.2.85 ASCQM Sanitize User Input used in Path Manipulation

7.4.70 CWE-611 Improper Restriction of XML External Entity Reference ('XXE')

Reference

<https://cwe.mitre.org/data/definitions/CWE-611>

Roles

- the <XMLHandlingOperation>

Detection Patterns

- 8.2.84 ASCQM Secure Use of Unsafe XML Processing with Secure Parser
- 8.2.83 ASCQM Secure XML Parsing with Secure Options

7.4.71 CWE-1057 Data Access Control Element from Outside Designated Data Manager Component

Usage name

Circumventing data access routines

Reference

<https://cwe.mitre.org/data/definitions/1057>

Roles

- the <DataManager>
- the <DataAccess>

Detection Patterns

- 8.2.44 ASCQM Ban Unintended Paths

ISO/IEC 5055:2021(E)

7.4.72 CWE-415 Double Free

Reference

<https://cwe.mitre.org/data/definitions/415>

Roles

- the <ResourceRelease >
- the <ResourceAccess>

- the <ResourceUse>

Parent weaknesses

CWE-672 Operation on a Resource after Expiration or Release

Detection Patterns

8.2.76 ASCQM Ban Double Free On Pointers

7.4.73 CWE-416 Use After Free

Reference

<https://cwe.mitre.org/data/definitions/416>

Roles

- the <ResourceRelease>
- the <ResourceUse>

Parent weaknesses

CWE-672 Operation on a Resource after Expiration or Release

Detection Patterns

- 8.2.14 ASCQM Ban Free Operation on Pointer Received as Parameter
- 8.2.5 ASCQM Ban Use of Expired Pointer
- 8.2.13 ASCQM Implement Copy Constructor for Class with Pointer Resource

7.4.74 Security Detection Patterns

Detection Patterns

- 8.2.75 ASCQM Ban Allocation of Memory with Null Size
- 8.2.24 ASCQM Ban Assignment Operation Inside Logic Blocks
- 8.2.71 ASCQM Ban Buffer Size Computation Based on Array Element Pointer Size
- 8.2.70 ASCQM Ban Buffer Size Computation Based on Bitwise Logical Operation
- 8.2.72 ASCQM Ban Buffer Size Computation Based on Incorrect String Length Value
- 8.2.29 ASCQM Ban Comma Operator from Delete Statement
- 8.2.25 ASCQM Ban Comparison Expression Outside Logic Blocks
- 8.2.61 ASCQM Ban Creation of Lock on Inappropriate Object Type
- 8.2.60 ASCQM Ban Creation of Lock on Non-Final Object
- 8.2.57 ASCQM Ban Creation of Lock on Private Non-Static Object to Access Private Static Data

- 8.2.76 ASCQM Ban Double Free on Pointers
- 8.2.12 ASCQM Ban Double Release of Resource
- 8.2.100 ASCQM Ban File Creation with Default Permissions
- 8.2.14 ASCQM Ban Free Operation on Pointer Received as Parameter
- 8.2.43 ASCQM Ban Hard-Coded Literals used to Connect to Resource
- 8.2.68 ASCQM Ban Incompatible Lock Acquisition Sequences
- 8.2.82 ASCQM Ban Incorrect Joint Comparison
- 8.2.47 ASCQM Ban Incorrect Numeric Implicit Conversion
- 8.2.23 ASCQM Ban Incorrect Object Comparison
- 8.2.26 ASCQM Ban Incorrect String Comparison
- 8.2.49 ASCQM Ban Incorrect Synchronization Mechanisms
- 8.2.6 ASCQM Ban Input Acquisition Primitives without Boundary Checking Capabilities
- 8.2.27 ASCQM Ban Logical Operation with a Constant Operand
- 8.2.41 ASCQM Ban Non-Final Static Data in Multi-Threaded Context
- 8.2.81 ASCQM Ban Not Operator on Non-Boolean Operand of Comparison Operation
- 8.2.80 ASCQM Ban Not Operator on Operand of Bitwise Operation
- 8.2.50 ASCQM Ban Resource Access without Proper Locking in Multi-Threaded Context
- 8.2.78 ASCQM Ban Self Assignment
- 8.2.73 ASCQM Ban Sequential Acquisitions of Single Non-Reentrant Lock
- 8.2.59 ASCQM Ban Sleep Between Lock Acquisition and Release
- 8.2.3 ASCQM Ban String Manipulation Primitives without Boundary Checking Capabilities
- 8.2.44 ASCQM Ban Unintended Paths
- 8.2.55 ASCQM Ban Unmodified Loop Variable Within Loop
- 8.2.93 ASCQM Ban Use of Deprecated Libraries
- 8.2.5 ASCQM Ban Use of Expired Pointer
- 8.2.11 ASCQM Ban Use of Expired Resource
- 8.2.69 ASCQM Ban Use of Thread Control Primitives with Known Deadlock Issues
- 8.2.54 ASCQM Ban While TRUE Loop Without Path to Break
- 8.2.79 ASCQM Check Boolean Variables are Updated in Different Conditional Branches before Use
- 8.2.1 ASCQM Check Index of Array Access
- 8.2.95 ASCQM Check Input of Memory Allocation Primitives
- 8.2.2 ASCQM Check Input of Memory Manipulation Primitives
- 8.2.4 ASCQM Check Input of String Manipulation Primitives with Boundary Checking Capabilities
- 8.2.7 ASCQM Check Offset used in Pointer Arithmetic
- 8.2.21 ASCQM Check Return Value of Resource Operations Immediately
- 8.2.56 ASCQM Check and Handle ZERO Value before Use as Divisor
- 8.2.48 ASCQM Data Read and Write without Proper Locking in Multi-Threaded Context
- 8.2.20 ASCQM Handle Return Value of Must Check Operations
- 8.2.13 ASCQM Implement Copy Constructor for Class With Pointer Resource
- 8.2.32 ASCQM Implement Required Operations for Manual Resource Management
- 8.2.35 ASCQM Implement Virtual Destructor for Classes Derived from Class with Virtual Destructor
- 8.2.38 ASCQM Implement Virtual Destructor for Classes with Virtual Methods
- 8.2.36 ASCQM Implement Virtual Destructor for Parent Classes
- 8.2.9 ASCQM Initialize Pointers before Use
- 8.2.74 ASCQM Initialize Variables
- 8.2.77 ASCQM Initialize Variables before Use
- 8.2.99 ASCQM Log Caught Security Exceptions
- 8.2.63 ASCQM Release File Resource after Use in Class
- 8.2.37 ASCQM Release File Resource after Use in Operation
- 8.2.58 ASCQM Release Lock After Use
- 8.2.34 ASCQM Release Memory After Use
- 8.2.31 ASCQM Release Memory after Use with Correct Operation
- 8.2.33 ASCQM Release Platform Resource after Use

ISO/IEC 5055:2021(E)

- 8.2.30 ASCQM Release in Destructor Memory Allocated in Constructor
- 8.2.90 ASCQM Sanitize Stored Input used in User Output
- 8.2.94 ASCQM Sanitize User Input used as Array Index
- 8.2.8 ASCQM Sanitize User Input used as Pointer
- 8.2.98 ASCQM Sanitize User Input used as Serialized Object
- 8.2.96 ASCQM Sanitize User Input used as String Format
- 8.2.87 ASCQM Sanitize User Input used in Document Manipulation Expression
- 8.2.88 ASCQM Sanitize User Input used in Document Navigation Expression
- 8.2.128 ASCQM Sanitize User Input used in Expression Language Statement
- 8.2.97 ASCQM Sanitize User Input used in Loop Condition
- 8.2.85 ASCQM Sanitize User Input used in Path Manipulation
- 8.2.86 ASCQM Sanitize User Input used in SQL Access
- 8.2.92 ASCQM Sanitize User Input used in System Command
- 8.2.91 ASCQM Sanitize User Input used in User Output
- 8.2.89 ASCQM Sanitize User Input used to access Directory Resources
- 8.2.84 ASCQM Secure Use of Unsafe XML Processing with Secure Parser
- 8.2.83 ASCQM Secure XML Parsing with Secure Options
- 8.2.46 ASCQM Singleton Creation without Proper Locking in Multi-Threaded Context

8 ASCQM Weakness Detection Patterns

8.1 Specification of Detection Patterns

Detection patterns provide guidance for automated detection of the weaknesses enumerated in Clause 7. Each weakness may have several different instantiations in the source code. Thus, a weakness may be associated with several different detection patterns. Each detection pattern may be associated with weaknesses in several different quality measures. There are 135 detection patterns associated with the weaknesses in Automated Source Code Quality Measures. This number will grow as more detection patterns are discovered and specified.

Detection Patterns use micro-KDM to provide greater granularity to their specification of weakness patterns. Additional semantic constraints are required to coordinate producers and consumers of KDM models to use the KDM Program Element layer for control- and data-flow analysis applications, as well as for providing more precision for the Resource Layer and the Abstraction Layer. Micro-KDM achieves this by constraining the granularity of the leaf action elements and their meaning by providing the set of micro-actions with predefined semantics. Micro-KDM treats the original macro-action as a container that owns certain micro-actions with predefined semantics. Thus, precise semantics of the macro-action is defined. Micro-KDM constrains the patterns of how to map the statements of the existing system as determined by the programming language into KDM.

8.2 ASCQM Check Index of Array Access

Descriptor

ASCQM Check Index of Array

Access(PathFromDeclarationStatementToUseAsAnIndexStatement,
VariableDeclarationStatement, ArrayAccessStatement)

Description

Identify occurrences in application model where

- the <PathFromDeclarationStatementToUseAsAnIndexStatement> path
- from the <VariableDeclarationStatement> variable declaration statement
- to the <ArrayAccessStatement> array access statement using the variable as an index,
- lacks a range check operation.

KDM outline illustration

KDM elements present in the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
...
StorableUnit id="su1"
StorableUnit id="su2"
ArrayType id="at1"
StorableUnit id="su3" type="at1"
...
ActionElement id="ae2"
  Flow "ae3"
    Reads "su1"
    Writes "su2"
ActionElement id="ae3"
  Flow "ae4"
ActionElement id="ae4"
  Flow "ae5"
ActionElement id="ae5" kind="ArraySelect|ArrayReplace"
  Addresses "su3"
```

ISO/IEC 5055:2021(E)

```
    Reads "su2"  
    Reads|Writes ...  
    ...
```

KDM elements absent from the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
ActionElement id="ae2" kind="GreaterThan|GreaterThanOrEqual"  
    Reads "su2"  
    Reads ...  
    ...  
ActionElement id="ae3" kind="LessThan|LessThanOrEqual"  
    Reads "su2"  
    Reads ...  
    ...
```

What to report

Roles to report are:

- the <PathFromDeclarationStatementToUseAsAnIndexStatement> path
- the <VariableDeclarationStatement> variable declaration statement
- the <ArrayAccessStatement> array access statement

8.3 ASCQM Check Input of Memory Manipulation Primitives

Descriptor

ASCQM Check Input of Memory Manipulation Primitives (MemoryManipulationCall)

Description

Identify occurrences in application model where:

- the <MemoryManipulationCall> call to a memory manipulation function, procedure, method, ... with boundary checking capabilities
- uses the length parameter without range checking its value

KDM outline illustration

KDM elements present in the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
PointerType id="pt1"  
IntegerType id="it1"  
ControlElement id="ce1" name="memcpy|..." type="ce1_signature"  
    Signature id="ce1_signature"  
    ...  
    ParameterUnit id="pu1" type="dt1" kind="byValue"  
    ParameterUnit id="pu2" type="pt1" kind="return"  
    ...  
    ...  
StorableUnit id="su1" type="it1"  
    ...  
ActionElement id="ae1" kind="Call|PtrCall|MethodCall|VirtualCall"  
    ...  
    Reads "su1"  
    Calls "ce1"
```

KDM elements absent from the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
ActionElement id="ae2" kind="GreaterThan|GreaterThanOrEqual"  
  Reads "sul"  
  ...  
ActionElement id="ae3" kind="LessThan|LessThanOrEqual"  
  Reads "sul"  
  ...
```

What to report

Roles to report:

- the <MemoryManipulationCall> call to a memory manipulation function, procedure, method, ... with boundary checking capabilities

8.4 ASCQM Ban String Manipulation Primitives without Boundary Checking Capabilities

Descriptor

ASCQM Ban String Manipulation Primitives without Boundary Checking Capabilities(StringManipulationCall)

Description

Identify occurrences in application model where:

- the <StringManipulationCall> call to a string manipulation function, procedure, method, ... without boundary checking capabilities

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

```
ControlElement id="ce1" name="strcpy|strlen|..."  
  ...  
  ...  
ActionElement id="ae3" kind="Call|PtrCall|MethodCall|VirtualCall"  
  ...  
  Calls "ce1"
```

What to report

Roles to report:

- the <StringManipulationCall> call to a string manipulation function, procedure, method, ... without boundary checking capabilities

8.5 ASCQM Check Input of String Manipulation Primitives with Boundary Checking Capabilities

Descriptor

ASCQM Check Input of String Manipulation Primitives with Boundary Checking Capabilities (StringManipulationCall)

ISO/IEC 5055:2021(E)

Description

Identify occurrences in application model where:

- the <StringManipulationCall> call to a string manipulation function, procedure, method, ... with boundary checking capabilities
- uses the length parameter without range checking its value

KDM outline illustration

KDM elements present in the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
StringType id="st1"
IntegerType id="it1"
ControlElement id="ce1" name="strncpy|strncat|..." type="ce1_signature"
  Signature id="ce1_signature"
    ParameterUnit id="pu1" type="st1"
    ParameterUnit id="pu2" type="it1" kind="byValue"
    ParameterUnit id="pu3" type="st1" kind="return"
  ...
...
StorableUnit id="su1" type="it1"
...
ActionElement id="ae1" kind="Call|PtrCall|MethodCall|VirtualCall"
  ...
  Reads "su1"
  Calls "ce1"
```

KDM elements absent from the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
ActionElement id="ae2" kind="GreaterThan|GreaterThanOrEqual"
  Reads "su1"
  ...
ActionElement id="ae3" kind="LessThan|LessThanOrEqual"
  Reads "su1"
  ...
```

What to report

Roles to report:

- the <StringManipulationCall> call to a string manipulation function, procedure, method, ... with boundary checking capabilities

8.6 ASCQM Ban Use of Expired Pointer

Descriptor

ASCQM Ban Use of Expired Pointer (PathToPointerAccessFromPointerRelease, PointerReleaseStatement, PointerAccessStatement)

Description

Identify occurrences in application model where:

- the <PathToPointerAccessFromPointerRelease> path
- from the <PointerReleaseStatement> resource release statement
- to the <PointerAccessStatement> resource access statement

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

```
ClassUnit|IntegerType|DecimalType|FloatType|StringType|VoidType|... id="dt1"  
PointerType id="pt1"  
  ItemUnit id="pi1" type="dt1"  
StorableUnit id="su1" type="pt1"  
...  
ActionElement id="ae1" name="free|delete|..."  
  Addresses "pt1"  
  Flows "ae2"  
ActionElement id="ae2"  
  Flows "ae3"  
ActionElement id="ae3" kind=PtrSelect|PtrReplace|Call|PtrCall|MethodCall|VirtualCall"  
  Reads|Addresses "pt1"  
...  
or
```

```
ClassUnit|IntegerType|DecimalType|FloatType|StringType|VoidType|... id="dt1" name="dt1"  
PointerType id="pt1" name="pt1"  
  ItemUnit id="iu1" type="dt1" ext="dt1 & pt1"  
StorableUnit id="su1" type="dt1"  
StorableUnit id="su2" type="pt1"  
  HasType "pt1"  
  HasValue "su1"  
...  
ActionElement id="ae1" name="free|delete|...|push_back|..."  
  Addresses "su1"  
  Flows "ae2"  
ActionElement id="ae2"  
  Flows "ae3"  
ActionElement id="ae3" kind=PtrSelect|PtrReplace|Call|PtrCall|MethodCall|VirtualCall"  
  Reads|Addresses "su2"
```

What to report

Roles to report:

- the <PathToPointerAccessFromPointerRelease> path
- the <PointerReleaseStatement> resource release statement
- the <PointerAccessStatement> resource access statement

8.7 ASCQM Ban Input Acquisition Primitives without Boundary Checking Capabilities

Descriptor

ASCQM Ban Input Acquisition Primitives without Boundary Checking Capabilities
(InputAcquisitionCall)

Description

Identify occurrences in application model where:

- the <InputAcquisitionCall> call to an input acquisition function, procedure, method, ... without boundary checking capabilities

ISO/IEC 5055:2021(E)

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

```
ControlElement id="ce1" name="gets|scanf|..."
...
...
ActionElement id="ae3" kind="Call|PtrCall|MethodCall|VirtualCall"
...
  Calls "ce1"
```

What to report

Roles to report:

- the <InputAcquisitionCall> call to an input acquisition function, procedure, method, ... without boundary checking capabilities

8.8 ASCQM Check Offset used in Pointer Arithmetic

Descriptor

ASCQM Check Offset used in Pointer Arithmetic (ArithmeticExpression, EvaluationStatement)

Description

Identify occurrences in application model where:

- the result of the <ArithmeticExpression> arithmetic expression,
- with an offset value which is not range checked
- is used to dereference the pointer in the <EvaluationStatement> evaluation statement

KDM outline illustration

KDM elements present in the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
...
PointerType id="pt1"
StorableUnit id="su1" type="pt1"
...
IntegerType id="it1"
StorableUnit id="su2" type="it1"
StorableUnit id="su3" type="it1"
...
ActionElement id="ae1" kind="Add|Substract"
  Reads "su1"
  Reads "su2"
  Writes "su3"
...
ActionElement id="ae2" kind="PtrSelect|PtrReplace"
  Addresses "su3"
..
```

KDM elements absent from the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
ActionElement id="ae2" kind="GreaterThan|GreaterThanOrEqual"
  Reads "su2"
  Reads ...
...
ActionElement id="ae3" kind="LessThan|LessThanOrEqual"
  Reads "su2"
```

Reads ...
...

What to report

Roles to report are:

- the <ArithmeticExpression> arithmetic expression
- the <EvaluationStatement> evaluation statement

8.9 ASCQM Sanitize User Input used as Pointer

Descriptor

ASCQM Sanitize User Input used as Pointer (PathFromUserInputToPointerDereferencing, UserInput, PointerDereferencingStatement, PointerDereferencingSanitizationControlElementList)

Description

Identify occurrences in application model where:

- the <PathFromUserInputToPointerDereferencing> path
- from the <UserInput> user interface input
- to the <PointerDereferencingStatement> pointer dereferencing statement,
- lacks a sanitization operation from the <PointerDereferencingSanitizationControlElementList> list of vetted sanitizations.

The list of vetted sanitization primitives is an input to provide to the measurement process.

KDM outline illustration

KDM elements present in the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
UIModel
  UIField id="uf1"
  UIAction id="ua1" implementation="ae1" kind="input"
    ReadsUI "uf1"
  ...
CodeModel
  ...
  StorableUnit id="su1"
  StorableUnit id="su2"
  ActionElement id="ae1" kind="UI"
    Writes "su1"
    Flow "ae2"
  ActionElement id="ae2"
    Flow "ae3"
    Reads "su1"
    Writes "su2"
  ActionElement id="ae3"
    Flow "ae4"
  ActionElement id="ae4"
    Flow "ae5"
  ActionElement id="ae5" kind="PtrSelect"
    Addresses "su2"
    Reads|Writes ...
  ...
```

ISO/IEC 5055:2021(E)

KDM elements absent from the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
ControlElement id="ce1" kind="sanitization"  
...  
ActionElement id="ae3" kind="Call|PtrCall|MethodCall|VirtualCall"  
    Flow "ae4"  
    Calls "ce1"  
    Reads "su2"  
    Writes "su2"  
...
```

What to report

Roles to report are:

- the <PathFromUserInputToPointerDereferencing> path
- the <UserInput> user interface input
- the <PointerDereferencingStatement> pointer dereferencing statement,
- the <PointerDereferencingSanitizationControlElementList> list of vetted sanitizations.

8.10 ASCQM Initialize Pointers before Use

Descriptor

ASCQM Initialize Pointers before Use (PathToPointerAccessFromPointerDeclaration, PointerDeclarationStatement, PointerAccessStatement)

Description

Identify occurrences in application model where:

- the <PathToPointerAccessFromPointerDeclaration> path
- from the <PointerDeclarationStatement> pointer declaration statement
- to the <PointerAccessStatement> pointer access statement
- lacks a pointer initialization statement

excluding variable and platform resources

KDM outline illustration

KDM elements present in the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
...  
PointerType id="pt1"  
StorableUnit id="su1" type="pt1"  
...  
ActionElement id="ae2" ...  
    Flows "ae3"  
ActionElement id="ae3" kind="PtrSelect"  
    Reads "su1"  
...  
...
```

KDM elements absent from the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
...
ActionElement id="ae1" kind="Assign|Ptr"
  Writes "su1"
  Flows "ae2"
...
```

What to report

Roles to report are:

- the <PathToPointerAccessFromPointerDeclaration> path
- the <PointerDeclarationStatement> pointer declaration statement
- the <PointerAccessStatement> pointer access statement

8.11 ASCQM Check NULL Pointer Value before Use

Descriptor

ASCQM Check NULL Pointer Value before Use(EvaluationStatement)

Description

Identify occurrences in application model where:

- a pointer is evaluated in the <EvaluationStatement> evaluation statement
- with no NULL comparison operation performed on the pointer immediately before

KDM outline illustration

KDM elements present in the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
...
PointerType id="pt1"
  ItemUnit id="iu1"
StorableUnit id="su1" type="pt1"
ActionElement id="ae3" kind="PtrSelect|PtrReplace"
  Reads "iu1"
  Addresses "su1"
```

KDM elements absent from the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
...
Value id="v1" name="NULL|nullptr"
StorableUnit id="su2"
ActionElement id="ae1" kind="NotEqual"
  Reads "v1"
  Reads "su1"
  Writes "su2"
  Flows "ae2"
ActionElement id="ae2" kind="Condition"
  Reads "su2"
  TrueFlow "ae3"
  FalseFlow "ff1"
...
```

ISO/IEC 5055:2021(E)

What to report

Roles to report are:

- the <EvaluationStatement> evaluation statement

8.12 ASCQM Ban Use of Expired Resource

Descriptor

ASCQM Ban Use of Expired Resource (PathToResourceAccessFromResourceRelease, ResourceReleaseStatement, ResourceAccessStatement)

Description

Identify occurrences in application model where:

- the <PathToResourceAccessFromResourceRelease> path
- from the <ResourceReleaseStatement> resource release statement
- to the <ResourceAccessStatement> resource access statement excluding pointers

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

```
PlatformModel
...
DataManager|FileResource id="pr1"
...
PlatformResource id="pa1" kind="open" implementation="ae4"
  ManagesResource "pr1"
PlatformResource id="pa2" kind="close" implementation="ae1"
  ManagesResource "pr1"
...
CodeModel
...
ActionElement id="ae1" kind="PlatformAction"
  Flows "ae3"
ActionElement id="ae3"
  Flows "ae4"
ActionElement id="ae4" kind="PlatformAction"
...
...
```

What to report

Roles to report:

- the <PathToResourceAccessFromResourceRelease> path
- the <ResourceReleaseStatement> resource release statement
- the <ResourceAccessStatement> resource access statement

8.13 ASCQM Ban Double Release of Resource

Descriptor

ASCQM Ban Double Release of Resource (PathToResourceReleaseFromResourceRelease, FirstResourceReleaseStatement, SecondResourceReleaseStatement)

Description

Identify occurrences in application model where:

- the <PathToResourceReleaseFromResourceRelease> path
- from the <FirstResourceReleaseStatement> resource release statement
- to the <SecondResourceReleaseStatement> resource release statement

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

```
PlatformModel
...
DataManager|ExecutionResource id="pr1"
...
PlatformAction id="pa2" kind="close" implementation="ae1 ae4"
  ManagesResource "pr1"

...
CodeModel
...
ActionElement id="ae1" kind="PlatformAction"
  Flows "ae3"
ActionElement id="ae3"
  Flows "ae4"
ActionElement id="ae4" kind="PlatformAction"
...
...
```

What to report

Roles to report:

- the <PathToResourceReleaseFromResourceRelease> path
- the <FirstResourceReleaseStatement> resource release statement
- the <SecondResourceReleaseStatement> resource release statement

8.14 ASCQM Implement Copy Constructor for Class with Pointer Resource

Descriptor

ASCQM Implement Copy Constructor for Class with Pointer Resource (Class, Pointer)

Description

Identify occurrences in application model where:

- the <Class> Class
- owns the <Pointer> pointer resource
- but lacks a copy constructor

KDM outline illustration

KDM elements present in the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
PointerType id="pointerType"
...
ClassUnit id="cul"
  MemberUnit id="mul" type="pointerType"
...
```

ISO/IEC 5055:2021(E)

KDM elements absent from the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
ClassUnit id="cul"  
  ...  
  MethodUnit is="m1"  
name="class|this|__construct|new|New|__new__|alloc|constructor|initialize|..."  
methodKind="constructor" type="m1_signature"  
  Signature id = "m1_signature"  
    ParameterUnit id="p1" name="p1" type="class" kind="byReference"  
    ParameterUnit id="r" name="r" type="class" kind="return"  
  ...
```

What to report

Roles to report are:

- the <Class> Class
- the <Pointer> pointer resource

8.15 ASCQM Ban Free Operation on Pointer Received as Parameter

Descriptor

ASCQM Ban Free Operation on Pointer Received as Parameter (ReleaseStatement, Signature)

Description

Identify occurrences in application model where:

- the pointer is released by the <ReleaseStatement> release statement
- and was received as a parameter in the <Signature> signature

The list of release operations is technology, language dependent. For example, with C-type languages: free, delete.

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

```
...  
PointerType id="pt1"  
...  
ControlElement id="ce1" name="free|delete|..."  
...  
CallableUnit kind="regular|external|stored" | MethodUnit id="ce2" type="ce2_signature"  
  Signature id="ce2_signature"  
    ParameterUnit id="pul" kind="byReference" type="pt1"  
  ...  
  ActionElement id="ae1" kind="Call|PtrCall[MethodCall|VirtualCall"  
    Calls "ce1"  
    Reads "pul"  
  ...
```

What to report

Roles to report are:

- the <ReleaseStatement> release statement
- the <Signature> signature

8.16 ASCQM Ban Delete of VOID Pointer

Descriptor

(DeclarationStatement, ReleaseStatement)

Description

Identify occurrences in application model where:

- the pointer declared as a VOID pointer in <DeclarationStatement> declaration statement
- is released by the <ReleaseStatement> release statement
- without ever been casted into a non-VOID pointer

The list of release operations is technology, language dependent. For example, with C-type languages: delete.

KDM outline illustration

KDM elements present in the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
VoidType id="vt1"
PointerType id="pt1"
  ItemUnit id="iu1" type="vt1"
StorableUnit id="su1" type="pt1"
ControlElement id="ce1" name="delete|..."
...
ActionElement id="ae1" kind="Call|PtrCall|MethodCall|VirtualCall"
  Reads "su1"
  Calls "ce1"
```

KDM elements absent from the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
...
IntegerType|DecimalType|FloatType|StringType|ClassUnit id="dt1"
PointerType id="pt2"
  ItemUnit id="iu2" type="dt1"
ActionElement id="ae2" kind="TypeCast|DynCast"
  Reads "su1"
  UsesType "pt2"
  Writes "su1"
...
```

What to report

Roles to report are:

- the <DeclarationStatement> declaration statement
- the <ReleaseStatement> release statement

8.17 ASCQM Ban Variable Increment or Decrement Operation in Operations using the Same Variable

Descriptor

ASCQM Ban Variable Increment or Decrement Operation in Operations using the Same Variable
(VariableAssignment)

ISO/IEC 5055:2021(E)

Description

Identify occurrences in application model where:

- the <VariableAssignment> variable assignment
- uses the outcome of increment or decrement operation on a variable
- jointly with the variable itself

e.g. : $x + x++$;

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

```
StorableUnit id="su1"
ActionElement id="ae1" kind="Compound"
  ActionElement id="ae2" kind="Incr|Decr"
    Addresses "su1"
  ...
  ActionElement id="ae3"
    ...
    Reads "su1"
...
```

What to report

Roles to report:

- the <VariableAssignment> variable assignment

8.18 ASCQM Ban Reading and Writing the Same Variable Used as Assignment Value

Descriptor

ASCQM Ban Reading and Writing the Same Variable Used as Assignment Value (VariableAssignment)

Description

Identify occurrences in application model where:

- the <VariableAssignment> variable assignment
- uses the outcome of an operation on a variable
- jointly with the assignment of the variable itself

e.g. : $x = a + (a=2)$;

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

```
StorableUnit id="su1"
ActionElement id="ae1" kind="Compound"
  StorableUnit id="su2"
  ActionElement id="ae2" kind="Assign"
    ...
    Writes "su1"
  ...
  ActionElement id="ae3"
    ...
    Reads "su1"
    Writes "su2"
  ActionElement id="ae4" kind="Assign"
    Reads "su2"
```

Writes ...

What to report

Roles to report:

- the <VariableAssignment> variable assignment

8.19 ASCQM Handle Return Value of Resource Operations

Descriptor

ASCQM Handle Return Value of Resource Operations (CallToTheOperation)

Description

Identify occurrences in application model where:

- the platform resource management function, method, procedure, ... is called in the <CallToTheOperation> call statement
- with no use in a conditional statement of the return value

KDM outline illustration

KDM elements present in the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
PlatformModel
...
  DataManager|ExecutionResource|... id="pr1"
...
  PlatformResource id="pal" implementation="ae1"
    ManagesResource|ReadsResource|WritesResource "pr1"
...
CodeModel
...
  CallableUnit|MethodUnit id="cel" type="cel_signature"
    Signature id="cel_signature"
      ParameterUnit id="pul" kind="return"
...
  ActionElement id="ae1" kind="Call|PtrCall|MethodCall|VirtualCall"
...
```

KDM elements absent from the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
StorableUnit id="su1"
...
ActionElement id="ae1" kind="Call|PtrCall|MethodCall|VirtualCall"
  Writes "su1"
  Flows "ae2"
ActionElement id="ae2" kind="Switch"
  Reads "su1"
  GuardedFlow "gf1"
  GuardedFlow|FalseFlow "gf2"
...
```

or

```
StorableUnit id="su1"
StorableUnit id="su2"
```

ISO/IEC 5055:2021(E)

```
...
ActionElement id="ae1" kind="Call|PtrCall|MethodCall|VirtualCall"
  Writes "su1"
  Flows "ae2"
ActionElement id="ae2"
kind="Equal|NotEqual|LessThan|LessThanOrEqual|GreaterThan|GreatedThanOrEqual"
  Reads "su1"
  Writes "su2"
  Flows "ae3"
ActionElement id="ae3" kind="Condition"
  TrueFlow "tfl"
  FalseFlow "ffl"
...
```

What to report

Roles to report are:

- the <CallToTheOperation> call statement

8.20 ASCQM Ban Incorrect Numeric Conversion of Return Value

Descriptor

ASCQM Ban Incorrect Numeric Conversion of Return Value (FunctionMethodOrProcedure, VariableDataType, CallStatement, TargetDataType)

Description

Identify occurrences in application model where:

- the <FunctionMethodOrProcedure> function, method, procedure, ...
- declared to return a value with the <VariableDataType> numerical data type
- is called in the <CallStatement> call statement
- with assignment of its return value to a variable of the <TargetDataType> second numerical data type
- which is incompatible with the first one
- without any explicit casting

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

```
IntegerType|DecimalType|FloatType id="dt1"
IntegerType|DecimalType|FloatType id="dt2"
StorableUnit|ItemUnit|MemberUnit|Value id="de1" type="dt2"
...
CallableUnit|MethodUnit id="ce1" type="ce1_signature" attribute="CheckReturnValue|..."
  Signature id="ce1_signature"
  ParameterUnit id="pu1" kind="return" type="dt1"
...
ActionElement id="ae1" kind="Call|PtrCall|MethodCall|VirtualCall"
  Calls "ce1"
  Writes "de1"
...
```

and the numeric datatypes are not compatible.

What to report

Roles to report are:

- the <FunctionMethodOrProcedure> function, method, procedure, ...
- the <VariableDataType> numerical data type

- the <CallStatement> call statement with assignment
- the <TargetDataType> second numerical data type

8.21 ASCQM Handle Return Value of Must Check Operations

Descriptor

ASCQM Handle Return Value of Must Check Operations (CallToTheOperation)

Description

Identify occurrences in application model where:

- the must-check function, method, procedure, ... is called in the <CallToTheOperation> call statement
- with no use in a conditional statement of the return value

The must-check nature of a function, method, procedure, ... is technology dependent. For example, in Java: the @CheckReturnValue annotation

KDM outline illustration

KDM elements present in the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
...
CallableUnit|MethodUnit id="ce1" type="ce1_signature" attribute="CheckReturnValue|..."
    Signature id="ce1_signature"
        ParameterUnit id="pu1" kind="return"
...
ActionElement id="ae1" kind="Call|PtrCall|MethodCall|VirtualCall"
...
```

KDM elements absent from the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
StorableUnit id="su1"
...
ActionElement id="ae1" kind="Call|PtrCall|MethodCall|VirtualCall"
    Writes "su1"
    Flows "ae2"
ActionElement id="ae2" kind="Switch"
    Reads "su1"
    GuardedFlow "gf1"
    GuardedFlow|FalseFlow "gf2"
...
```

or

```
StorableUnit id="su1"
StorableUnit id="su2"
...
ActionElement id="ae1" kind="Call|PtrCall|MethodCall|VirtualCall"
    Writes "su1"
    Flows "ae2"
ActionElement id="ae2"
kind="Equal|NotEqual|LessThan|LessThanOrEqual|GreaterThan|GreatedThanOrEqual"
    Reads "su1"
    Writes "su2"
    Flows "ae3"
ActionElement id="ae3" kind="Condition"
    TrueFlow "tf1"
```

ISO/IEC 5055:2021(E)

```
FalseFlow "ff1"  
...
```

What to report

Roles to report are:

- the <CallToTheOperation> call statement

8.22 ASCQM Check Return Value of Resource Operations Immediately

Descriptor

ASCQM Check Return Value of Resource Operations Immediately (CallToTheOperation)

Description

Identify occurrences in application model where:

- a platform resource management function, procedure, method, ... is called in the <CallToTheOperation> call statement
- with no operation performed immediately after on the return value

KDM outline illustration

KDM elements present in the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
PlatformModel  
...  
DataManager|ExecutionResource|... id="pr1"  
...  
PlatformResource id="pa1" implementation="ae1"  
  ManagesResource|ReadsResource|WritesResource "pr1"  
...  
CodeModel  
  CallableUnit|MethodUnit id="ce1" type="ce1_signature"  
    Signature id="ce1_signature"  
    ParameterUnit id="pu1" kind="return"  
  ...  
  ActionElement id="ae1" kind="Call|PtrCall|MethodCall|VirtualCall"  
  ...
```

KDM elements absent from the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
StorableUnit id="su1"  
...  
ActionElement id="ae1" kind="Call|PtrCall|MethodCall|VirtualCall"  
  Writes "su1"  
  Flows "ae2"  
ActionElement id="ae2"  
  Reads "su1"
```

What to report

Roles to report are:

- the <CallToTheOperation> call statement8.22

8.23 ASCQM Ban Useless Handling of Exceptions

Descriptor

ASCQM Ban Useless Handling of Exceptions (CatchBlock)

Description

Identify occurrences in application model where:

- the <CatchBlock> catch block
- does not report on the error condition as a new throw or as a return value

KDM outline illustration

KDM elements present in the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
...
CatchUnit id="cu1"
    ...
    ...
```

KDM elements absent from the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
...
CatchUnit id="cu1"
    ...
    ActionElement id="ael" kind="Throw"
        Throws ...
    ...
```

or

```
...
CatchUnit id="cu1"
    ...
    ActionElement id="ael" kind="Return"
        Reads ...
    ...
```

What to report

Roles to report are:

- the <CatchBlock> catch block

8.24 ASCQM Ban Incorrect Object Comparison

Descriptor

ASCQM Ban Incorrect Object Comparison (ObjectEqualityComparisonExpression)

Description

Identify occurrences in application model where:

- the <ObjectEqualityComparisonExpression> equality comparison expression between two objects

ISO/IEC 5055:2021(E)

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

```
ClassUnit id="cu1"  
StorableUnit|ItemUnit|MemberUnit id="de1" type="cu1"  
StorableUnit|ItemUnit|MemberUnit id="de2" type="cu1"  
ActionElement id="ae1" kind="Equals|NotEqual" ext="de1 == de2 | de1 != de2"  
    Reads "de1"  
    Reads "de2"
```

What to report

Roles to report are:

- the <ObjectEqualityComparisonExpression> equality comparison expression

8.25 ASCQM Ban Assignment Operation Inside Logic Blocks

Descriptor

ASCQM Ban Assignment Operation Inside Logic Blocks (AssignmentExpression, LogicBlock)

Description

Identify occurrences in application model where:

- the <AssignmentExpression> assignment expression
- is used within the <LogicBlock> logic block

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

```
...  
ActionElement id="ae1" kind="Compound"  
    StorableUnit|MemberUnit id="de1"  
    ...  
    ActionElement id="ae2" kind="Condition|Switch"  
        Reads "de1"  
        ActionElement id="ae3" kind="Assign"  
            Writes "de1"  
...  
...
```

What to report

Roles to report are:

- the <AssignmentExpression> assignment expression
- the <LogicBlock> logic block

8.26 ASCQM Ban Comparison Expression Outside Logic Blocks

Descriptor

ASCQM Ban Comparison Expression Outside Logic Blocks (ComparisonExpression)

Description

Identify occurrences in application model where:

- the <ComparisonExpression> comparison expression
- is not used within a logic block

KDM outline illustration

KDM elements present in the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
...
ActionElement id="ae1" kind="Compound"
  StorableUnit|MemberUnit id="de1"
  ...
  ActionElement id="ae3" kind="Equal"
    Reads "de1"
...
```

KDM elements absent from the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
...
ActionElement id="ae1" kind="Compound"
  StorableUnit|MemberUnit id="de1"
  ...
  ActionElement id="ae2" kind="Condition|Switch"
    Reads "su1"
    StorableUnit id="su1" type="register"
    ActionElement id="ae3" kind="Equal"
      Writes "su1"
      Reads "de1"
...
```

What to report

Roles to report are:

- the <ComparisonExpression> comparison expression

8.27 ASCQM Ban Incorrect String Comparison

Descriptor

ASCQM Ban Incorrect String Comparison (StringEqualityComparisonExpression)

Description

Identify occurrences in application model where:

- the <StringEqualityComparisonExpression> equality comparison expression between two strings

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

```
StringType id="st1"
StorableUnit|ItemUnit|MemberUnit id="de1" type="st1"
StorableUnit|ItemUnit|MemberUnit id="de2" type="st1"

ActionElement id="ae1" kind="Equals|NotEqual" ext="de1 == de2 | de1 != de2"
  Reads "de1"
```

ISO/IEC 5055:2021(E)

Reads "de2"

What to report

Roles to report are:

- the <StringEqualityComparisonExpression> equality comparison expression

8.28 ASCQM Ban Logical Operation with a Constant Operand

Descriptor

ASCQM Ban Logical Operation with a Constant Operand (ComparisonExpression)

Description

Identify occurrences in application model where:

- the <ComparisonExpression> comparison expression with a constant operand

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

```
Value id="v1"  
...  
ActionElement id="ae1" kind="And|Or|Xor"  
  Reads "v1"  
  ...
```

What to report

Roles to report are:

- the <ComparisonExpression> comparison expression

8.29 ASCQM Implement Correct Object Comparison Operations

Descriptor

ASCQM Implement Correct Object Comparison Operations (Class)

Description

Identify occurrences in application model where:

- the <Class> class
- lacking the required comparison operations

KDM outline illustration

KDM elements present in the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
ClassUnit id="cu1"
```

KDM elements absent from the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
BooleanType id="bt1"
IntegerType id="it1"
...
ClassUnit id="cu1"
...
  MethodUnit id="mu1" name="equals|Equals|operator==|..." type="mu1_signature"
    Signature id="mu1_signature"
      ParameterUnit id="pu1" kind="byReference" type="cu1"
      ParameterUnit id="pu2" kind="Return" type="bt1"
    ...
  MethodUnit id="mu2" name="hashCode|GetHashCode|hash|..." type="mu2_signature"
    Signature id="mu2_signature"
      ParameterUnit id="pu3" kind="byReference" type="cu1"
      ParameterUnit id="pu4" kind="Return" type="it1"
  ...
...
```

What to report

Roles to report are:

- the <Class> class

8.30 ASCQM Ban Comma Operator from Delete Statement

Descriptor

ASCQM Ban Comma Operator from Delete Statement (DeleteStatement, CommaStatement)

Description

Identify occurrences in application model where:

- the <DeleteStatement> delete statement
- compounded with the <CommaStatement> comma statement

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

```
...
CallableUnit id="cu1" name="delete" callableKind="operator"
CallableUnit id="cu2" name="comma" callableKind="operator"
...
ActionElement id="ae1" kind="Compound" ext="delete x, y"
  ActionElement id="ae2" kind="Call"
    Calls "cu1"
  ...
  ActionElement id="ae3" kind="Call"
    Calls "cu2"
  ...
...
```

What to report

Roles to report are:

- the <DeleteStatement> delete this statement
- the <CommaStatement> comma statement

ISO/IEC 5055:2021(E)

8.31 ASCQM Release in Destructor Memory Allocated in Constructor

Descriptor

ASCQM Release in Destructor Memory Allocated in Constructor (MemoryAllocationStatement)

Description

Identify occurrences in application model where:

- the <MemoryAllocationStatement> memory allocation statement in the class constructor
- lacking a corresponding memory release statement in the class destructor

KDM outline illustration

KDM elements present in the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
ClassUnit|IntegerType|DecimalType|FloatType|StringType|VoidType|... id="dt1"  
PointerType id="pt1"  
  ItemUnit id="iu1" type="dt1"  
...  
ClassUnit id="cu1"  
  ...  
  StorableUnit id="su1" type="pt1"  
  ...  
  MethodUnit id="mu1" MethodKind="constructor"  
    ...  
    ActionElement id="ae1" kind="New|NewArray"  
      Creates "dt1"  
      Writes "su1"  
...
```

or

```
ControlElement id="ce1" name="malloc|calloc|..."  
...  
ClassUnit|IntegerType|DecimalType|FloatType|StringType|VoidType|... id="dt1"  
PointerType id="pt1"  
  ItemUnit id="iu1" type="dt1"  
...  
ClassUnit id="cu1"  
  ...  
  StorableUnit id="su1" type="pt1"  
  ...  
  MethodUnit id="mu1" MethodKind="constructor"  
    ...  
    ActionElement id="ae1" kind="Call"  
      Calls "ce1"  
      Writes "su1"  
...
```

KDM elements absent from the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
ControlElement id="ce2" name="delete|delete[]|free|..."  
...  
ClassUnit id="cu1"  
  ...  
  MethodUnit id="mu2" MethodKind="destructor"  
    ...  
    ActionElement id="ae2" kind="Call"  
      Addresses "su1"  
      Calls "ce2"
```

What to report

Roles to report:

- the <MemoryAllocationStatement> memory allocation statement

8.32 ASCQM Release Memory after Use with Correct Operation

Descriptor

ASCQM Release Memory after Use with Correct Operation (MemoryAllocationStatement, MemoryReleaseStatement)

Description

Identify occurrences in the application model where:

- the memory is allocated via the <MemoryAllocationStatement> allocation statement
- then released via the mismatched <MemoryReleaseStatement> release statement

The pairs of matching allocation/deallocation primitives and operations are technology, framework, language dependant. For example: malloc/free, calloc/free, realloc/free in C/C+, new/delete, new[]/delete[] in C+, new/Release() with COM IUnknown interface.

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

```
ClassUnit|IntegerType|DecimalType|FloatType|StringType|VoidType|... id="dt1"  
PointerType id="pt1"  
    ItemUnit id="iu1" type="dt1"  
...  
StorableUnit id="su1" type="pt1"  
...  
ActionElement id="ae1" kind="New"  
    Creates "dt1"  
    Writes "su1"  
...  
ControlElement id="ce2" name="delete[]|free|..."  
...  
ActionElement id="ae2" kind="Call"  
    Addresses "su1"  
    Calls "ce2"
```

or

```
ClassUnit|IntegerType|DecimalType|FloatType|StringType|VoidType|... id="dt1"  
PointerType id="pt1"  
    ItemUnit id="iu1" type="dt1"  
...  
StorableUnit id="su1" type="pt1"  
...  
ActionElement id="ae1" kind="NewArray"  
    Creates "dt1"  
    Writes "su1"  
...  
ControlElement id="ce2" name="delete|free|..."  
...  
ActionElement id="ae2" kind="Call"  
    Addresses "su1"  
    Calls "ce2"
```

ISO/IEC 5055:2021(E)

or

```
ControlElement id="ce1" name="malloc|calloc|..."
...
ClassUnit|IntegerType|DecimalType|FloatType|StringType|VoidType|... id="dt1"
PointerType id="pt1"
    ItemUnit id="iu1" type="dt1"
...
StorableUnit id="su1" type="pt1"
...
ActionElement id="ae1" kind="Call"
    Calls "ce1"
    Writes "su1"
...
ControlElement id="ce2" name="delete|delete[]|..."
...
ActionElement id="ae2" kind="Call"
    Addresses "su1"
    Calls "ce2"
```

What to report

Roles to report are:

- the <MemoryAllocationStatement> allocation statement
- the <MemoryReleaseStatement> release statement

8.33 ASCQM Implement Required Operations for Manual Resource Management

Descriptor

ASCQM Implement Required Operations for Manual Resource Management (ObjectDeclaration)

Description

Identify occurrences in application model where:

- the <ObjectDeclaration> object declaration
- declares an object with manual resource management capabilities
- which lacks the required operation.

The manual resource management capability is technology, framework, and language dependent. For example: class inheritance from IDisposable in C#, and AutoClosable in Java, class with `__enter__` in python.

KDM outline illustration

KDM elements present in the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
InterfaceUnit id="iu1" name="IDisposable|AutoClosable|..."
...
ClassUnit id="cu1"
    Extends "iu1"
...

```

of

```
...
ClassUnit id="cu1"
    MethodUnit "mu1" name="__enter__"
```

...

KDM elements absent from the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
ClassUnit id="cu1"  
...  
    MethodUnit "mu1" name="dispose|close|__exit__|..."
```

What to report

Roles to report:

- the <ObjectDeclaration> object declaration

8.34 ASCQM Release Platform Resource after Use

Descriptor

ASCQM Release Platform Resource after Use (FunctionProcedureOrMethod, ResourceAllocationStatement, PathToExitWithoutResourceRelease)

Description

Identify occurrences in application model where:

- the <FunctionProcedureOrMethod> function, procedure, method, ...
- uses the <ResourceAllocationStatement> resource allocation statement
- excluding memory and file resources
- while there exist the <PathToExitWithoutResourceRelease> path to exit the <FunctionProcedureOrMethod> function, procedure, method, ... without releasing the resource

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

```
PlatformModel  
...  
    DataManager|ExecutionResource id="pr1"  
...  
    PlatformAction id="pa1" kind="open" implementation="ae1"  
        ManagesResource "pr1"  
    PlatformAction id="pa2" kind="close" implementation="ae2"  
        ManagesResource "pr1"  
...  
CodeModel  
...  
    CallableUnit|MethodUnit id="ce1" name="..."  
...  
        ActionElement id="ae1" kind="PlatformAction"  
            Flows "ae3"  
        ActionElement id="ae3"  
            Flows "ae4"  
        ActionElement id="ae4" kind="Return"  
...  
        ActionElement id="ae2" kind="PlatformAction"  
...  
...
```

ISO/IEC 5055:2021(E)

What to report

Roles to report

- the <FunctionProcedureOrMethod> function, procedure, method, ...
- the <ResourceAllocationStatement> file resource open statement
- the <PathToExitWithoutResourceRelease> path to exit

8.35 ASCQM Release Memory After Use

Descriptor

ASCQM Release Memory After Use (MemoryAllocationStatement)

Description

Identify occurrences in application model where :

- the <MemoryAllocationStatement> memory allocation statement
- lacking a corresponding memory release statement

KDM outline illustration

KDM elements present in the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
ClassUnit|IntegerType|DecimalType|FloatType|StringType|VoidType|... id="dt1"  
PointerType id="pt1"  
    ItemUnit id="iu1" type="dt1"  
...  
StorableUnit id="su1" type="pt1"  
...  
ActionElement id="ae1" kind="New|NewArray"  
    Creates "dt1"  
    Writes "su1"  
...
```

or

```
ControlElement id="ce1" name="malloc|calloc|..."  
...  
ClassUnit|IntegerType|DecimalType|FloatType|StringType|VoidType|... id="dt1"  
PointerType id="pt1"  
    ItemUnit id="iu1" type="dt1"  
...  
StorableUnit id="su1" type="pt1"  
...  
ActionElement id="ae1" kind="Call"  
    Calls "ce1"  
    Writes "su1"  
...
```

KDM elements absent from the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
ControlElement id="ce2" name="delete|delete[]|free|..."  
...  
ActionElement id="ae2" kind="Call"  
    Addresses "su1"  
    Calls "ce2"
```

What to report

Roles to report :

- the <MemoryAllocationStatement> memory allocation statement

8.36 ASCQM Implement Virtual Destructor for Classes Derived from Class with Virtual Destructor

Descriptor

ASCQM Implement Virtual Destructor for Classes Derived from Class with Virtual Destructor (Class, ParentClass, ParentVirtualDestructor)

Description

Identify occurrences in application model where :

- the <Class> class
- inherits from the <ParentClass> parent class
- with the <ParentVirtualDestructor> virtual destructor
- but lacks a virtual destructor

KDM outline illustration

KDM elements present in the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
ClassUnit id="c1"  
    ....  
    MethodUnit is="m1" methodKind="method" isVirtual="true"  
    ....  
ClassUnit id="c2" InheritsFrom="c1"  
    ....
```

KDM elements absent from the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
ClassUnit id="c2"  
    ....  
    MethodUnit is="m2" methodKind="destructor" isVirtual="true"  
    ....
```

What to report

Roles to report are :

- the <Class> class
- the <ParentClass> parent class
- the <ParentVirtualDestructor> virtual destructor

8.37 ASCQM Implement Virtual Destructor for Parent Classes

Descriptor

ASCQM Implement Virtual Destructor for Parent Classes (Class, ParentClass)

ISO/IEC 5055:2021(E)

Description

Identify occurrences in application model where:

- the <Class> class
- inherits from the <ParentClass> parent class
- which lacks a virtual destructor

KDM outline illustration

KDM elements present in the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
ClassUnit id="c1"  
    ....  
ClassUnit id="c2" InheritsFrom="c1"  
    ...
```

KDM elements absent from the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
ClassUnit id="c1"  
    ....  
    MethodUnit is="m1" methodKind="method" isVirtual="true"  
    ...
```

What to report

Roles to report are:

- the <Class> class
- the <ParentClass> parent class

8.38 ASCQM Release File Resource after Use in Operation

Descriptor

ASCQM Release File Resource after Use in Operation (FunctionProcedureOrMethod, FileResourceOpenStatement, PathToExitWithoutFileResourceClose)

Description

Identify occurrences in application model where:

- the <FunctionProcedureOrMethod> function, procedure, method, ...
- uses the <FileResourceOpenStatement> file resource open statement
- while there exist the <PathToExitWithoutFileResourceClose> path to exit the <FunctionProcedureOrMethod> function, procedure, method, ... without releasing the file resource

The path to exit the function, procedure, method, includes calls to other functions, procedures, methods,

...

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

```
PlatformModel
...
FileResource id="pr1"
...
PlatformAction id="pa1" kind="open" implementation="ae1"
  ManagesResource "pr1"
PlatformAction id="pa2" kind="close" implementation="ae2"
  ManagesResource "pr1"

...
CodeModel
...
CallableUnit|MethodUnit id="ce1" name="..."
...
ActionElement id="ae1" kind="PlatformAction"
  Flows "ae3"
ActionElement id="ae3"
  Flows "ae4"
ActionElement id="ae4" kind="Return"
...
ActionElement id="ae2" kind="PlatformAction"
...
...
```

What to report

Roles to report:

- the <FunctionProcedureOrMethod> function, procedure, method, ...
- the <FileResourceOpenStatement> file resource open statement
- the <PathToExitWithoutFileResourceClose> path to exit

8.39 ASCQM Implement Virtual Destructor for Classes with Virtual Methods

Descriptor

ASCQM Implement Virtual Destructor for Classes with Virtual Methods (Class, VirtualMethod)

Description

Identify occurrences in application model where:

- the <Class> class
- owns the <VirtualMethod> virtual method
- but lacks a virtual destructor

KDM outline illustration

KDM elements present in the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
ClassUnit id="c1"
....
MethodUnit is="m1" methodKind="method" isVirtual="true"
...
```

ISO/IEC 5055:2021(E)

KDM elements absent from the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
ClassUnit id="c1"  
  ....  
  MethodUnit is="m2" methodKind="destructor" isVirtual="true"  
  ...
```

What to report

Roles to report are:

- the <Class> class
- the <VirtualMethod> virtual method

8.40 ASCQM Ban Self Destruction

Descriptor

ASCQM Ban Self Destruction (DeleteThisStatement)

Description

Identify occurrences in application model where:

- the <DeleteThisStatement> delete this statement

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

```
CallableUnit id="cu1" name="delete" callableKind="operator"  
...  
ClassUnit id="cu1"  
  ...  
  StorableUnit id="su1"  
  ...  
  ActionElement id="ae1" kind="This"  
    Writes "su1"  
  ...  
  ActionElement id="ae2" kind="Call"  
    Addresses "su1"  
    Calls "cu1"
```

What to report

Roles to report:

- the <DeleteThisStatement> delete this statement

8.41 ASCQM Manage Time-Out Mechanisms in Blocking Synchronous Calls

Descriptor

ASCQM Manage Time-Out Mechanisms in Blocking Synchronous Calls (BlockingSynchronousCall, TimeOutOption)

Description

Identify occurrences in application model where:

- the <BlockingSynchronousCall> synchronous call
- does not use its <TimeoutOption> time-out option

The list of blocking synchronous primitives is technology, framework, language dependent. For example, in Java: connect(), receive().

KDM outline illustration

KDM elements present in the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
ControlElement id="ce1" name="connect|receive|..." type="ce1_signature"  
  Signature id="ce1_signature"  
  ...  
  ParameterUnit id="pu1" name="timeout|..."  
  ...  
Value id="v1" attribute="infinite_wait"  
...  
ActionElement id="ae1" kind="Call|PtrCall|MethodCall|VirtualCall"  
  ...  
  Calls "ce1"  
  Reads "v1"
```

KDM elements absent from the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
...  
Value id="v2" attribute="finite_wait"  
...  
ActionElement id="ae1" kind="Call|PtrCall|MethodCall|VirtualCall"  
  ...  
  Calls "ce1"  
  Reads "v2"
```

What to report

Roles to report:

- the <BlockingSynchronousCall> synchronous call
- the <TimeoutOption> time-out option

8.42 ASCQM Ban Non-Final Static Data in Multi-Threaded Context

Descriptor

ASCQM Ban Non-Final Static Data in Multi-Threaded Context (Declaration)

Description

Identify occurrences in application model where:

- the <Declaration> declaration of non-final static data
- in multi-threaded environment

ISO/IEC 5055:2021(E)

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

```
CodeModel
  StorableUnit id="su1" isFinal="false" isStatic="true"
...
PlatformModel
  DeployedResource id="drl"
    ExecutionResource id="er1"
      Thread id="t1"
      Thread id="t2"
...
```

What to report

Roles to report are:

- the <Declaration> declaration of non-final static data

8.43 ASCQM Ban Non-Serializable Elements in Serializable Objects

Descriptor

ASCQM Ban Non-Serializable Elements in Serializable Objects (SerializableClass, NonSerializableMember)

Description

Identify occurrences in application model where:

- the <SerializableClass> serializable class
- owns the <NonSerializableMember> non-serializable member, excluding final and transient members and members of primitive types
- without owning custom serialization / deserialization methods

The serializable nature of the element is technology dependent For example.: serializable nature comes from a serializable SerializableAttribute attribute or the inheritance from System.Runtime.Serialization.ISerializable in .NET, and the inheritance from the java.io.Serializable interface in Java.

KDM outline illustration

KDM elements present in the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
Package id="java.io" name="java.io" | Namespace id="System.Runtime.Serialization"
name="System.Runtime.Serialization"
  InterfaceUnit id="iu1" name="Serializable|ISerializable"
ClassUnit id="cu1"
ClassUnit id="cu2" Implements="iu1" | attribute="Serializable"
ClassUnit id="cu3" Implements="iu1" | Extends="cu2" | attribute="Serializable"
  MemberUnit id="mu1" type="cu1"
```

KDM elements absent from the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
ClassUnit id="cu1" Implements="iu1" | Extends="cu2" | attribute="Serializable"
```

or

```
ClassUnit id="cu3" Implements="iu1" | Extends="cu2" | attribute="Serializable"  
  MemberUnit id="mu1" type="cu1" storableKind="static"
```

or

```
ClassUnit id="cu3" Implements="iu1" | Extends="cu2" | attribute="Serializable"  
  MemberUnit id="mu1" type="cu1" attribute="transient|NonSerialized"
```

or

```
ClassUnit id="cu3" Implements="iu1" | Extends="cu2"  
  MethodUnit id="mu1" name="readObject" kind="method"  
  MethodUnit id="mu2" name="readObjectNoData" kind="method"  
  MethodUnit id="mu3" name="writeObject" kind="method"
```

or

```
ClassUnit id="cu3" Implements="iu1" | Extends="cu2"  
  MethodUnit id="mu1" name="GetObjectData" kind="method"  
  MethodUnit id="mu2" name="cu2" kind="constructor" type="mu2_signature"  
    Signature id="mu2_Signature"  
      ParameterUnit id="p1" name="info" type="SerializationInfo"  
      ParameterUnit id="p2" name="context" type="StreamingContext"
```

What to report

Roles to report:

- the <SerializableClass> serializable class
- the <NonSerializableMember> non-serializable member

8.44 ASCQM Ban Hard-Coded Literals used to Connect to Resource

Descriptor

ASCQM Ban Hard-Coded Literals used to Connect to Resource (InitializationStatement, ResourceAccessStatement)

Description

Identify occurrences in application model where:

- the <InitializationStatement> initialization statement
- initialize a variable used in the <ResourceAccessStatement> resource access statement as parameter to call a resource access primitive

It covers credentials, passwords, encryption keys, tokens, remember-me keys...

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

```
Value id="hcv" name="hcv"  
...  
StorableUnit|ItemUnit|MemberUnit id="su1"  
...  
ActionElement id="ae1" kind="Assign  
  Reads "hcv"
```

ISO/IEC 5055:2021(E)

```
Writes "su1"
...
MarshaledResource|MessagingResource|DataManager|ExecutionResource id="nwr"
...
ControlElement id="ce1"
  ...
  ActionElement id="ae2" kind="Platform"
    ManagesResource|ReadsResource|WritesResource "nwr"
  ...
ActionElement id="ae3" kind="Call|PtrCall|MethodCall|VirtualCall"
  Reads "su1"
  ...
  Calls "ce1"
```

What to report

Roles to report are:

- the <InitializationStatement> initialization statement
- the <ResourceAccessStatement> resource access statement

8.45 ASCQM Ban Unintended Paths

Descriptor

ASCQM Ban Unintended Paths (ArchitectureModel, Relation, Caller, Callee, OriginModule, TargetModule)

Description

Identify occurrences in the application model where:

- the <Relation> call-type, data, use relations
- between the <Caller> caller
- grouped in the <OriginModule> origin layer, component, or subsystem
- and the <Callee> callee
- grouped into the <TargetModule> target layer, component, or subsystem
- as defined in the <ArchitectureModel> architectural blueprint defining layers, components, or subsystems
- where relations from the <OriginModule> layer, component, or subsystem to the <TargetModule> layer, component, or subsystem are not intended

The architectural blueprint defining layers, components, or subsystems is application dependent.

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

```
...
Layer|Component|Subsystem id="m1"
  ...
  CallableUnit callableKind="regular|external|stored" | MethodUnit id="ce1" name="..."
    ...
    ActionElement id="ae1"
      UsesType|Reads|Writes|Creates|Addresses|Calls|Dispatches "ce2"
  ...
Layer|Component|Subsystem id="m2"
  ...
  CallableUnit callableKind="regular|external|stored" | MethodUnit id="ce2" name="..."
  ...
```

With "m1" not intended to reference "m2"

What to report

Roles to report are:

- the <ArchitectureModel> architectural blueprint
- the <Relation> relation
- the <Caller> caller
- the <Callee> callee
- the <OriginModule> origin layer, component, or subsystem
- the <TargetModule> target layer, component, or subsystem

8.46 ASCQM Ban Incorrect Float Number Comparison

Descriptor

ASCQM Ban Incorrect Float Number Comparison (FloatEqualityComparisonExpression)

Description

Identify occurrences in application model where

- the <FloatEqualityComparisonExpression> equality comparison expression
- between two float numbers

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

```
FloatType id="ft1"  
StorableUnit|ItemUnit|MemberUnit id="de1" type="ft1"  
StorableUnit|ItemUnit|MemberUnit id="de2" type="ft1"  
ActionElement id="ae1" kind="Equals|NotEqual" ext="de1 == de2 | de1 != de2"  
    Reads "de1"  
    Reads "de2"
```

What to report

Roles to report are:

- the <FloatEqualityComparisonExpression> equality comparison expression

8.47 ASCQM Singleton Creation without Proper Locking in Multi-Threaded Context

Descriptor

ASCQM Singleton Creation without Proper Locking in Multi-Threaded Context (SingletonClass, InitializationStatement)

Description

Identify occurrences in application model where:

- the <SingletonClass> singleton class
- with the <InitializationStatement> self-reference initialization statement
- not properly locked
- while it operates in a multi-threaded environment

ISO/IEC 5055:2021(E)

The proper locking is technology, framework, and language dependent.
The detection of multi-threading capability is technology, framework, and language dependent.

KDM outline illustration

KDM elements present in the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
PlatformModel
  DeployedResource id="dr1"
    ExecutionResource id="er1"
      Thread id="t1"
    ...
    PlatformAction id="pa1" implementation="ae1"
      ManagesResource "t1"
  ...
...
CodeModel
  ActionElement id="ae1"
  ...
  ClassUnit id="singleton" exportKind="public"
    MemberUnit id="reference" isStatic="true" exportKind="private" type="singleton"
    MethodUnit id="c" kind="constructor" exportKind="private" type="c_signature"
      Signature
        ParameterUnit id="r1" kind="return" type="singleton"
      ...
    MethodUnit id="refget" kind="method" storableKind="static" exportKind="public"
type="refget_signature"
      Signature id="refget_signature"
        ParameterUnit id="r2" kind="return" type="singleton"
    ActionElement id="a2" name="a2" kind="Return"
      Writes "r2"
      Reads "reference"
  ...
...
```

KDM elements absent from the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
PlatformModel
  DeployedResource id="dr1"
  ...
  LockResource id="lr1"
  ...
  PlatformAction id="pa2" kind="lock" implementation="ae3"
    ManagesResource|ReadsResource|WritesResource "lr1"
  PlatformAction id="pa3" kind="unlock" implementation="ae5"
    ManagesResource|ReadsResource|WritesResource "lr1"
  ...
...
CodeModel
  ClassUnit id="singleton" exportKind="public"
  ...
  ActionElement id="ae2" kind="Compound"
    EntryFlow "ae3"
    ActionElement id="ae3" kind="PlatformAction"
      Flows "ae4"
    ActionElement id="ae4"
      Writes "reference"
      Flows "ae5"
    ActionElement id="ae5" kind="PlatformAction"
  ...
...
```

What to report

Roles to report are:

- the <SingletonClass> singleton class
- the <InitializationStatement> initialization statement

8.48 ASCQM Ban Incorrect Numeric Implicit Conversion

Descriptor

ASCQM Ban Incorrect Numeric Implicit Conversion (Variable, VariableDataType, VariableAssignmentStatement, Data, TargetDataType)

Description

Identify occurrences in application model where:

- the <Variable> variable is declared with the <VariableDataType> numerical data type
- then updated is the <VariableAssignmentStatement> assignment statement
- with the <Data> data of the <TargetDataType> second numerical data type
- which is incompatible with the first one
- and without any range check or explicit casting

KDM outline illustration

KDM elements present in the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
IntegerType|DecimalType|FloatType id="dt1"  
StorableUnit|ItemUnit|MemberUnit id="de1" type="dt1"  
IntegerType|DecimalType|FloatType id="dt2"  
StorableUnit|ItemUnit|MemberUnit|Value id="de2" type="dt2"  
ActionElement id="ae1" kind="Assign"  
    Writes "de1"  
    Reads "de2"
```

KDM elements absent from the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
ActionElement id="ae2" kind="LessThan|LessThanOrEqual"  
    Reads "de2"  
ActionElement id="ae3" kind="GreaterThan|GreaterThanOrEqual"  
    Reads "de2"
```

or

```
ActionElement id="ae1" kind="TypeCast"  
    Reads "de2"  
    UsesType "dt1"  
    Writes "de1"
```

and the numeric datatypes are not compatible.

Compatibility comes from storage size and primary types. For example.: char and int8, wchar and int16, 64-bit pointers and 64-bits long integers, ...

ISO/IEC 5055:2021(E)

What to report

Roles to report are:

- the <Variable> variable
- the <VariableDataType> numerical data type
- the <VariableAssignmentStatement> assignment statement
- the <Data> data
- the <TargetDataType> second numerical data type

8.49 ASCQM Data Read and Write without Proper Locking in Multi-Threaded Context

Descriptor

ASCQM Data Read and Write without Proper Locking in Multi-Threaded Context
(InitializationStatement)

Description

Identify occurrences in application model where:

- the <WriteOrReadStatement> write or read statement
- of variable with the <NonAtomicDataType> non-atomic data type
- is not properly locked,
- while it operates in a multi-threaded environment

The proper locking is technology, framework, and language dependent.

The detection of multi-threading capability is technology, framework, and language dependent.

The list of non-atomic data types is technology, framework, and language dependent.

KDM outline illustration

KDM elements present in the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
PlatformModel
  DeployedResource id="dr1"
    ExecutionResource id="er1"
      Thread id="t1"
      ...
      PlatformAction id="pa1" implementation="ae1"
        ManagesResource "t1"
      ...
  ...
CodeModel
  ActionElement id="ae1"
  ...
  DataType id="dt1" isAtomic="false"
  StorableUnit id="su1" type="dt1"
  ...
  ActionElement id="ae4" kind="Assign|Select|..."
    Reads|Writes "su1"
  ...
```

KDM elements absent from the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
PlatformModel
  DeployedResource id="dr1"
  ...
  LockResource id="lr1"
  ...
  PlatformAction id="pa2" kind="lock" implementation="ae3"
    ManagesResource|ReadsResource|WritesResource "lr1"
  PlatformAction id="pa3" kind="unlock" implementation="ae5"
    ManagesResource|ReadsResource|WritesResource "lr1"
  ...
CodeModel
  ...
  ActionElement id="ae2" kind="Compound"
    EntryFlow "ae3"
  ActionElement id="ae3" kind="PlatformAction"
    Flows "ae4"
  ActionElement id="ae4" kind="Assign|Select|..."
    Reads|Writes "su1"
    Flows "ae5"
  ActionElement id="ae5" kind="PlatformAction"
  ...
```

What to report

Roles to report are:

- the <InitializationStatement> initialization statement

8.50 ASCQM Ban Incorrect Synchronization Mechanisms

Descriptor

ASCQM Ban Incorrect Synchronization Mechanisms (IncorrectSynchronizationPrimitiveCall)

Description

Identify occurrences in application model where:

- the <IncorrectSynchronizationPrimitiveCall> call to incorrect synchronization primitive
- while it operates in a multi-threaded environment

The list of incorrect synchronization primitives is technology, framework, language dependent. For example.: java.lang.Thread.run() in Java; getlogin() in C; synchronization primitives with EJBs. The detection of multi-threading capability is technology, framework, and language dependent.

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

```
CodeModel
  ControlElement id="ce1" name="run|getlogin|..."
  ...
  ...
  ActionElement id="ae3" kind="Call|PtrCall|MethodCall|VirtualCall"
    ...
    Calls "ce1"
  ...
PlatformModel
  DeployedResource id="dr1"
  ExecutionResource id="er1"
```

ISO/IEC 5055:2021(E)

```
Thread id="t1"  
Thread id="t2"
```

...

What to report

Roles to report are:

- the <IncorrectSynchronizationPrimitiveCall> call to incorrect synchronization primitive

8.51 ASCQM Ban Resource Access without Proper Locking in Multi-Threaded Context

Descriptor

ASCQM Ban Resource Access without Proper Locking in Multi-Threaded Context
(ResourceAccessStatement)

Description

Identify occurrences in application model where:

- the <ResourceAccessStatement> access statement to a resource
- not properly locked
- while it operates in a multi-threaded environment

The proper locking is technology, framework, and language dependent.

The detection of multi-threading capability is technology, framework, and language dependent.

KDM outline illustration

KDM elements present in the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
PlatformModel  
  DeployedResource id="dr1"  
    ExecutionResource id="er1"  
      Thread id="t1"  
      ...  
      PlatformAction id="pa1" implementation="ae1"  
        ManagesResource "t1"  
      ...  
      StreamResource|FileResource|... id="pr1"  
      ...  
      PlatformAction id="pa2" implementation="ae2"  
        ManagesResource|ReadsResource|WritesResource "pr1"  
      ...  
  ...  
CodeModel  
  ActionElement id="ae1" kind="PlatformAction"  
  ...  
  ActionElement id="ae2" kind="PlatformAction"  
  ...  
  ...
```

KDM elements absent from the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
PlatformModel  
  DeployedResource id="dr1"  
  ...  
  LockResource id="lr1"
```

```
...
PlatformAction id="pa2" kind="lock" implementation="ae4"
  ManagesResource|ReadsResource|WritesResource "lr1"
PlatformAction id="pa3" kind="unlock" implementation="ae5"
  ManagesResource|ReadsResource|WritesResource "lr1"
...
CodeModel
  ClassUnit id="singleton" exportKind="public"
    ...
      ActionElement id="ae3" kind="Compound"
        EntryFlow "ae4"
        ActionElement id="ae4" kind="PlatformAction"
          Flows "ae2"
        ActionElement id="ae2"
          Flows "ae5"
        ActionElement id="ae5" kind="PlatformAction"
...

```

What to report

Roles to report are:

- the <ResourceAccessStatement> access statement to a resource

8.52 ASCQM Ban Incorrect Type Conversion

Descriptor

ASCQM Ban Incorrect Type Conversion (Variable, VariableDataType, VariableAssignmentStatement, Data, TargetDataType)

Description

Identify occurrences in application model where:

- the <Variable> variable is declared with the <VariableDataType> non-numerical data type
- then updated is the <VariableAssignmentStatement> assignment statement
- with the <Data> data is of the <TargetDataType> second non-numerical data type
- which is incompatible with the first one

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

```
StringType|ClassUnit|... id="dt1"
StorableUnit|ItemUnit|MemberUnit id="de1" type="dt1"
StringType|ClassUnit|... id="dt2"
StorableUnit|ItemUnit|MemberUnit|Value id="de2" type="dt2"
ActionElement id="ae1" kind="Assign"
  Writes "de1"
  Reads "de2"

```

or

```
StringType|ClassUnit|... id="dt1"
PointerType id="pt1"
StorableUnit|ItemUnit|MemberUnit id="de1" type="pt1"
StringType|ClassUnit|... id="dt2"
PointerType id="pt2"
ActionElement id="ae1" kind="TypeCast"
  Reads "de1"
  UsesType "pt2"

```

ISO/IEC 5055:2021(E)

Where the non-numeric datatypes are not compatible.

Compatibility comes from inheritance links between objects, and, when numeric types are concerned, from storage size and primary types. For example: char and int8, wchar and int16, 64-bit pointers and 64-bits long integers, ...

What to report

Roles to report are

- the <Variable> variable
- the <VariableDataType> data type
- the <VariableAssignmentStatement> assignment statement
- the <Data> data
- the <TargetDataType> second data type

8.53 ASCQM Ban Return of Local Variable Address

Descriptor

ASCQM Ban Return of Local Variable Address (LocalVariable, Operation)

Description

Identify occurrences in application model where:

- the address of the <LocalVariable> local variable
- is returned by the <Operation> operation

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

```
...
PointerType id="pt1"
CallableUnit callableKind="regular|external|stored" | MethodUnit id="ce1" name="..."
type="ce1_signature"
  Signature id="ce1_signature"
    ...
    ParameterUnit id="pul" kind="return" type="pt1"
  ...
  StorableUnit id="su1" kind="register"
  StorableUnit id="su2" kind="local"
  ActionElement id="ae1" kind="Ptr"
    Writes "su1"
    Addresses "su2"
  ActionElement id="ae2" kind="Return"
    Reads "su1"
...
```

What to report

Roles to report are:

- the <LocalVariable> local variable address
- the <Operation> operation

8.54 ASCQM Ban Storage of Local Variable Address in Global Variable

Descriptor

ASCQM Ban Storage of Local Variable Address in Global Variable (LocalVariable, StorageStatement, GlobalVariable)

Description

Identify occurrences in application model where:

- the address of the <LocalVariable> local variable
- is stored by the <StorageStatement> statement
- into the <GlobalVariable> global variable

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

```
StorableUnit id="su1" kind="global"
...
CallableUnit callableKind="regular|external|stored" | MethodUnit id="ce1"
...
  StorableUnit id="su2" kind="register"
  StorableUnit id="su3" kind="local"
  ActionElement id="ae1" kind="Ptr"
    Writes "su2"
    Addresses "su3"
  ActionElement id="ae2" kind="Assign"
    Reads "su2"
    Writes "su3"
...
```

What to report

Roles to report are:

- the <LocalVariable> local variable address
- the <StorageStatement> statement
- the <GlobalVariable> global variable

8.55 ASCQM Ban While TRUE Loop Without Path to Break

Descriptor

ASCQM Ban While TRUE Loop Without Path To Break (WhileTrueLoop)

Description

Identify occurrences in the application model where:

- the <WhileTrueLoop> "while true" loop
- lacks a control flow to a break statement out of the loop

KDM outline illustration

KDM elements present in the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
BooleanType id="booleanType"
Value id="true" name="true" type="booleanType"
ActionElement id="ae1" kind="Compound"
  ActionElement id="ae2" kind="Condition"
```

ISO/IEC 5055:2021(E)

```
    Reads "true"  
    TrueFlow "tf1"  
    FalseFlow "ff1"  
    ActionElement id="tf1" ...  
    ...  
    Flows "ae2"  
ActionElement id="ff1" ...
```

KDM elements absent from the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
ActionElement id="ae1" kind="Compound"  
    ActionElement id="ae2" kind="Condition"  
    ...  
    TrueFlow "tf1"  
    ...  
    ActionElement id="tf1" ...  
        Flows "ae3"  
    ActionElement id="ae3"  
        Flows "e1"  
    ActionElement id="e1" kind="Goto"  
        Flows "ff1"  
    ...  
ActionElement id="ff1" ...
```

What to report

Roles to report:

- the <WhileTrueLoop> "while true" loop

8.56 ASCQM Ban Unmodified Loop Variable Within Loop

Descriptor

ASCQM Ban Unmodified Loop Variable Within Loop (WhileLoop)

Description

Identify occurrences in the application model where:

- the <WhileLoop> while loop
- lacks an update of the condition value within the loop

KDM outline illustration

KDM elements present in the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
BooleanType id="booleanType"  
StorableUnit id="su1" type="booleanType"  
ActionElement id="ae1" kind="Compound"  
    ...  
    ActionElement id="ae2" kind="Condition"  
        Reads "su1"  
    ...  
    ...  
    ...
```

KDM elements absent from the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
ActionElement id="ae1" kind="Compound"  
...  
  ActionElement id="ae3" kind="Assign|Incr|Decr"  
    Writes "su1"  
    ...  
  ...
```

What to report

Roles to report:

- the <WhileLoop> while loop

8.57 ASCQM Check and Handle ZERO Value before Use as Divisor

Descriptor

ASCQM Check and Handle ZERO Value before Use as Divisor (DivisionStatement)

Description

Identify occurrences in application model where:

- the <DivisionStatement> division statement
- uses a variable which is not checked and handled before use as divisor immediately before

KDM outline illustration

KDM elements present in the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
StorableUnit id="su1"  
StorableUnit id="su2"  
ActionElement id="ae3" kind="Divide"  
  Reads "su1"  
  Reads "su2"
```

KDM elements absent from the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
...  
Value id="v1" name="0"  
StorableUnit id="su3"  
ActionElement id="ae1" kind="NotEqual"  
  Reads "v1"  
  Reads "su2"  
  Writes "su3"  
  Flows "ae2"  
ActionElement id="ae2" kind="Condition"  
  Reads "su3"  
  TrueFlow "ae3"  
  FalseFlow "ff1"  
...
```

What to report

Roles to report are:

- the <DivisionStatement> division statement

ISO/IEC 5055:2021(E)

8.58 ASCQM Ban Creation of Lock on Private Non-Static Object to Access Private Static Data

Descriptor

ASCQM Ban Creation of Lock On Private Non-Static Object to Access Private Static Data
(PrivateNonStaticLock, DataAccess, PrivateStaticData)

Description

Identify occurrences in application model where:

- the <PrivateNonStaticLock> private non-static lock object
- is used to lock a block including the <DataAccess> data access
- to the <PrivateStaticData> private static data

The locking mechanism is technology, framework, language dependent.

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

```
PlatformModel
  DeployedResource id="dr1"
  ...
  LockResource id="lr1"
  ...
  PlatformAction id="pa2" kind="lock" implementation="ae1"
    ManagesResource|ReadsResource|WritesResource "lr1"
  ...
CodeModel
  ...
  StorableUnit id="su1" isStatic="false" exportKind="private"
  StorableUnit id="su2" isStatic="true" exportKind="private"
  ...
  ActionElement id="ae1" kind="PlatformAction"
    Reads "su1"
    Flows "ae2"
  ActionElement id="ae2"
    Flows "ae3"
  ActionElement id="ae3" kind="Assign|PtrReplace|ArrayReplace|PtrSelect|ArraySelect|..."
    Reads|Writes "su2"
  ...
  ...
```

What to report

Roles to report:

- the <PrivateNonStaticLock> private non-static lock object
- the <DataAccess> data access
- the <PrivateStaticData> private static data

8.59 ASCQM Release Lock After Use

Descriptor

ASCQM Release Lock After Use (FunctionProcedureOrMethod, LockAcquisitionStatement,
PathToExitWithoutLockRelease)

Description

Identify occurrences in application model where:

- the <FunctionProcedureOrMethod> function, procedure, method, ...
- uses the <LockAcquisitionStatement> lock acquisition statement
- while there exist the <PathToExitWithoutLockRelease> path to exit the <FunctionProcedureOrMethod> function, procedure, method, ... without releasing the lock resource

The path to exit the function, procedure, method, includes calls to other functions, procedures, methods, ...

The locking mechanism is technology, framework, and language dependent.

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

```
PlatformModel
  DeployedResource id="dr1"
  ...
  LockResource id="lr1"
  ...
  PlatformAction id="pa2" kind="lock" implementation="ae1"
    ManagesResource|ReadsResource|WritesResource "lr1"
  PlatformAction id="pa3" kind="unlock" implementation="ae2"
    ManagesResource|ReadsResource|WritesResource "lr1"
  ...
CodeModel
  ...
  CallableUnit|MethodUnit id="ce1" name="..."
  ...
  ActionElement id="ae1" kind="PlatformAction"
    Flows "ae3"
  ActionElement id="ae3"
    Flows "ae4"
  ActionElement id="ae4" kind="Return"
  ...
  ActionElement id="ae2" kind="PlatformAction"
  ...
  ...
```

What to report

Roles to report:

- the <FunctionProcedureOrMethod> function, procedure, method, ...
- the <LockAcquisitionStatement> lock acquisition statement
- the <PathToExitWithoutLockRelease> path to exit

8.60 ASCQM Ban Sleep Between Lock Acquisition and Release

Descriptor

ASCQM Ban Sleep Between Lock Acquisition and Release (PathFromLockAcquisitionToLockRelease, LockAcquisitionStatement, LockReleaseStatement, SleepStatement)

ISO/IEC 5055:2021(E)

Description

Identify occurrences in application model where:

- the <PathFromLockAcquisitionToLockRelease> path
- from the <LockAcquisitionStatement> lock acquisition statement
- to the <LockReleaseStatement> lock release statement
- contains the <SleepStatement> sleep statement

The path includes calls to other functions, procedures, methods, ...

The locking mechanism is technology, framework, and language dependent.

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

```
PlatformModel
  DeployedResource id="dr1"
  ...
  LockResource id="lr1"
  ...
  PlatformAction id="pa2" kind="lock" implementation="ae1"
    ManagesResource|ReadsResource|WritesResource "lr1"
  PlatformAction id="pa3" kind="unlock" implementation="ae5"
    ManagesResource|ReadsResource|WritesResource "lr1"
  ...
  ExecutionResource id="er1"
  ...
  Thread id="t1"
  ...
  PlatformAction id="pa3" kind="sleep" implementation="ae3"
    ManagesResource "t1"
  ...
CodeModel
  ...
  CallableUnit|MethodUnit id="ce1" name="..."
  ...
  ActionElement id="ae1" kind="PlatformAction"
    Flows "ae2"
  ActionElement id="ae2"
    Flows "ae3"
  ActionElement id="ae3" kind="PlatformAction"
    Flows "ae4"
  ActionElement id="ae4"
    Flows "ae5"
  ActionElement id="ae5" kind="PlatformAction"
  ...
  ...
```

What to report

Roles to report:

- the <PathFromLockAcquisitionToLockRelease> path
- the <LockAcquisitionStatement> lock acquisition statement
- the <LockReleaseStatement> lock release statement
- the <SleepStatement> sleep statement

8.61 ASCQM Ban Creation of Lock on Non-Final Object

Descriptor

ASCQM Ban Creation of Lock On Non-Final Object (NonFinalObjectDeclaration, LockingAcquisitionStatement)

Description

Identify occurrences in application model where:

- the <NonFinalObjectDeclaration> non-final object declaration
- declares an object used as a lock in the <LockingAcquisitionStatement> locking acquisition statement

The locking mechanism is technology, framework, language dependent.

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

```
PlatformModel
  DeployedResource id="dr1"
  ...
  LockResource id="lr1"
  ...
  PlatformAction id="pa2" kind="lock" implementation="ae1"
    ManagesResource|ReadsResource|WritesResource "lr1"
  ...
CodeModel
  ...
  StorableUnit id="sul" isFinal="false"
  ...
  ActionElement id="ae1" kind="PlatformAction"
    Reads "sul"
  ...
```

What to report

Roles to report:

- the <NonFinalObjectDeclaration> non-final object declaration
- the <LockingAcquisitionStatement> locking acquisition statement

8.62 ASCQM Ban Creation of Lock on Inappropriate Object Type

Descriptor

ASCQM Ban Creation of Lock On Inappropriate Object Type (ObjectDeclaration, LockingAcquisitionStatement)

Description

Identify occurrences in application model where:

- the <ObjectDeclaration> object declaration
- declares an object used as a lock in the <LockingAcquisitionStatement> locking acquisition statement
- while its type is not suitable for locking

The list of proper locking object types is technology, framework, language dependent. For example, in C# and Java: Reference Types, excluding Boxed Types, Strings

ISO/IEC 5055:2021(E)

KDM outline illustration

KDM elements present in the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
PlatformModel
  DeployedResource id="dr1"
  ...
  LockResource id="lr1"
  ...
  PlatformAction id="pa2" kind="lock" implementation="ae1"
    ManagesResource|ReadsResource|WritesResource "lr1"
  ...
CodeModel
  ...
  StorableUnit id="sul"
  ...
  ActionElement id="ae1" kind="PlatformAction"
    Reads "sul"
  ...
```

KDM elements absent from the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
...
CodeModel
  ...
  ClassUnit|InterfaceUnit|... id="dt1"
  StorableUnit id="sul" type="dt1"
  ...
```

What to report

Roles to report:

- the <ObjectDeclaration> object declaration
- the <LockingAcquisitionStatement> locking acquisition statement

8.63 ASCQM NULL Terminate Output of String Manipulation Primitives

Descriptor

ASCQM NULL Terminate Output Of String Manipulation Primitives (StringManipulationCallStatement)

Description

Identify occurrences in application model where:

- the <StringManipulationCallStatement> string manipulation call statement
- is not immediately followed by adding a NULL termination to the resulting string

KDM outline illustration

KDM elements present in the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
StringType id="string"
StorableUnit id="sul" type="string"
...
ControlElement id="cel" type="cel_signature"
  Signature id="cel_signature"
    ParameterUnit id="pul" kind="Return|byReference" type="string"
  ...
```

```
ActionElement id="ae1" kind="Call|PtrCall|MethodCall|VirtualCall"  
  Calls "ce1"  
  Writes "su1"
```

KDM elements absent from the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
Value id="null"  
ActionElement id="ae2" kind="PtrReplace|ArrayReplace"  
  Reads "null"  
  Addresses "su1"
```

What to report

Roles to report:

- the <StringManipulationCallStatement> string manipulation call statement

8.64 ASCQM Release File Resource after Use in Class

Descriptor

ASCQM Release File Resource after Use in Class (Class, FileResourceOpenStatement)

Description

Identify occurrences in application model where:

- the <Class> class, ...
- uses the <FileResourceOpenStatement> file resource open statement
- without releasing the file resource in any of its methods

The path to exit the function, procedure, method, includes calls to other functions, procedures, methods,
...

KDM outline illustration

KDM elements present in the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
PlatformModel  
  ...  
  FileResource id="pr1"  
  ...  
  PlatformAction id="pa1" kind="open" implementation="ae1"  
    ManagesResource "pr1"  
  PlatformAction id="pa2" kind="close" implementation="ae2"  
    ManagesResource "pr1"  
  ...  
CodeModel  
  ...  
  ClassUnit id="cu1"  
    ...  
    ActionElement id="ae1" kind="PlatformAction"  
    ...  
  ...
```

ISO/IEC 5055:2021(E)

KDM elements absent from the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
ClassUnit id="cul"  
  ...  
  ActionElement id="ae2" kind="PlatformAction"  
  ...
```

What to report

Roles to report:

- the <Class> class
- the <FileResourceOpenStatement> file resource open statement

8.65 ASCQM Use Break in Switch Statement

Descriptor

ASCQM Use Break in Switch Statement (Switch, ControlFlowBranch)

Description

Identify occurrences in application model where:

- the <ControlFlowBranch> control flow branch
- of the <Switch> switch
- does not contain a break statement

KDM outline illustration

KDM elements present in the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
StorableUnit id="su1"  
StorableUnit id="su2"  
StorableUnit id="su3"  
ActionElement id="ae1" kind="Switch"  
  Reads "su1"  
  GuardedFlow "gf1"  
  GuardedFlow "gf2"  
  ...  
  FalseFlow "ff1"  
ActionElement id="gf1" kind="Guard"  
  Reads "su2"  
  Flows "f1"  
ActionElement id="gf2" kind="Guard"  
  Reads "su3"  
  Flows "f2"  
...  
ActionElement id="ff1" kind="Compound"  
  ...  
  ActionElement id="g1" kind="Goto"  
    Flows "e1"  
ActionElement id="f1" kind="Compound"  
  ...  
ActionElement id="f2" kind="Compound"  
  ...  
  ActionElement id="g1" kind="Goto"  
    Flows "e1"  
...  
ActionElement id="e1" ...
```

KDM elements absent from the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
StorableUnit id="su1"
StorableUnit id="su2"
ActionElement id="ae1" kind="Switch"
  Reads "su1"
  GuardedFlow "gf1"
  ...
ActionElement id="gf1" kind="Guard"
  Reads "su2"
  Flows "f1"
  ...
ActionElement id="f1" kind="Compound"
  ...
  ActionElement id="g1" kind="Goto"
    Flows "e1"
  ...
ActionElement id="e1" ...
```

What to report

Roles to report are:

- the <Switch> switch
- the <ControlFlowBranch> control flow branch

8.66 ASCQM Catch Exceptions

Descriptor

ASCQM Catch Exceptions (Method, Exception, MethodCall)

Description

Identify occurrences in application model where:

- the <Method> method
- declared as throwing the <Exception> exception
- is called in the <MethodCall> method call
- which does not catch exceptions of type <Exception>

KDM outline illustration

KDM elements present in the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
...
ClassUnit id="cu1"
...
MethodUnit id="mul" type="mul_signature"
  Signature id="mul_signature"
    ParameterUnit id="pu1" type="cu1" kind="throws"
  ...
...
ActionElement id="ae1" kind="MethodCall"
  Calls "mul"
...
```

ISO/IEC 5055:2021(E)

KDM elements absent from the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
...
TryUnit id="t1"
  ...
  ActionElement id="ae1" kind="MethodCall"
    Calls "mu1"
  ...
  ExceptionFlow "c1"
...
CatchUnit id="c1"
  ParameterUnit id="pu2" type="cu1"
  ...
...
```

What to report

Roles to report are:

- the <Method> method
- the <Exception> exception
- the <MethodCall> method call

8.67 ASCQM Ban Empty Exception Block

Descriptor

ASCQM Ban Empty Exception Block (CatchBlock)

Description

Identify occurrences in application model where:

- the <CatchBlock> catch block
- is empty

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

```
...
CatchUnit id="cu1"
  ActionElement id="ae1" kind="Nop"
...
```

What to report

Roles to report are:

- the <CatchBlock> catch block

8.68 ASCQM Initialize Resource before Use

Descriptor

ASCQM Initialize Resource before Use (PathToResourceAccessFromResourceDeclaration, ResourceDeclarationStatement, ResourceAccessStatement)

Description

Identify occurrences in application model where:

- the <PathToResourceAccessFromResourceDeclaration> path
- from the <ResourceDeclarationStatement> resource declaration statement
- to the <ResourceAccessStatement> resource access statement
- lacks a resource initialization statement

excluding pointers and variables

KDM outline illustration

KDM elements present in the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
PlatformModel
...
PlatformResource id="pr1"
...
PlatformResource id="pa1" kind="read|write" implementation="ae6"
  ReadsResource|WritesResource "pr1"
...
CodeModel
...
StorableUnit id="sul"
ActionElement id="ae1" kind="Assign"
  Writes "sul"
  Flows "ae3"
ActionElement id="ae3" ...
  Flows "ae4"
ActionElement id="ae4" ...
  Flows "ae5"
ActionElement id="ae5" ...
  Flows "ae6"
ActionElement id="ae6" kind="PlatformAction"
  Reads "sul"
...
...
```

KDM elements absent from the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
PlatformModel
...
PlatformResource id="pa2" kind="open" implementation="ae4"
  ReadsResource|WritesResource "pr1"
...
CodeModel
...
ActionElement id="ae4" kind="PlatformAction"
  Reads "sul"
  Flows "ae5"
...
...
```

What to report

Roles to report:

- the <PathToResourceAccessFromResourceDeclaration> path
- the <ResourceDeclarationStatement> resource declaration statement
- the <ResourceAccessStatement> resource access statement

ISO/IEC 5055:2021(E)

8.69 ASCQM Ban Incompatible Lock Acquisition Sequences

Descriptor

ASCQM Ban Incompatible Lock Acquisition Sequences (LockAcquisitionSequence, ReverseLockAcquisitionSequence)

Description

Identify occurrences in application model where:

- the <LockAcquisitionSequence> sequence of lock acquisition
- is the reverse of the <ReverseLockAcquisitionSequence> sequence of lock acquisition

The locking mechanism is technology, framework, and language dependent.

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

```
PlatformModel
  DeployedResource id="dr1"
  ...
  LockResource id="lr1"
  LockResource id="lr2"
  ...
  PlatformAction id="pa1" kind="lock" implementation="ae1 ae12"
    ManagesResource|ReadsResource|WritesResource "lr1"
  PlatformAction id="pa2" kind="lock" implementation="ae3 ae10"
    ManagesResource|ReadsResource|WritesResource "lr2"
  ...
CodeModel
  ...
  ActionElement id="ae1" kind="PlatformAction"
    Flows "ae2"
  ActionElement id="ae2" ...
    Flows "ae3"
  ActionElement id="ae3" kind="PlatformAction"
    Flows "ae4"
  ActionElement id="ae4" ...
  ...
  ActionElement id="ae10" kind="PlatformAction"
    Flows "ae11"
  ActionElement id="ae11" ...
    Flows "ae12"
  ActionElement id="ae12" kind="PlatformAction"
    Flows "ae13"
  ActionElement id="ae13" ...
```

What to report

Roles to report are:

- the <LockAcquisitionSequence> sequence of lock acquisition
- the <ReverseLockAcquisitionSequence> sequence of lock acquisition

8.70 ASCQM Ban Use of Thread Control Primitives with Known Deadlock Issues

Descriptor

ASCQM Ban Use of Thread Control Primitives with Known Deadlock Issues
(ThreadControlPrimitiveCall)

Description

Identify occurrences in application model where:

- the <ThreadControlPrimitiveCall> call to a thread control function, procedure, method, ... with known deadlock issues.

The list of primitives is technology, framework, language dependant. For example, in Java: java.lang.Thread.suspend(), java.lang.Thread.resume(), java.lang.ThreadGroup.suspend(), java.lang.ThreadGroup.resume() and dependent methods java.lang.ThreadGroup.allowThreadSuspension().

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

```
ControlElement id="ce1" name="java.lang.Thread.suspend|java.lang.Thread.resume|..."
...
...
ActionElement id="ae3" kind="Call|PtrCall|MethodCall|VirtualCall"
...
  Calls "ce1"
```

What to report

Roles to report:

- the <ThreadControlPrimitiveCall> call to a thread control function, procedure, method, ... with known deadlock issues.

8.71 ASCQM Ban Buffer Size Computation Based on Bitwise Logical Operation

Descriptor

ASCQM Ban Buffer Size Computation Based on Bitwise Logical Operation (MemoryAllocationCall, BitwiseOperation)

Description

Identify occurrences in application model where:

- the <MemoryAllocationCall> call to a memory allocation primitive
- uses the length parameter based on the <BitwiseOperation> bitwise operation

The list of memory allocation primitives is technology, framework, language dependent. For example with C-type languages: malloc, calloc, realloc.

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

```
IntegerType id="it1"
...
ControlElement id="ce1" name="malloc|calloc|realloc|..." type="ce1_signature"
  Signature id="ce1_signature"
    ParameterUnit id="pu1" type="it1" kind="byValue"
    ParameterUnit id="pu1" type="pt1" kind="return"
  ...
...
StorableUnit id="su1" type="it1"
```

ISO/IEC 5055:2021(E)

```
StorableUnit id="su2" type="it1"  
StorableUnit id="su3" type="it1"  
...  
ActionElement id="ae1" kind="BitAnd|BitOr|BitXor"  
  Reads "su1"  
  Reads "su2"  
  Writes "su3"  
ActionElement id="ae2" kind="Call|PtrCall|MethodCall|VirtualCall"  
  Reads "su3"  
  Calls "ce1"
```

What to report

Roles to report:

- the <MemoryAllocationCall> call to a memory allocation primitive
- the <BitwiseOperation> bitwise operation

8.72 ASCQM Ban Buffer Size Computation Based on Array Element Pointer Size

Descriptor

ASCQM Ban Buffer Size Computation Based on Array Element Pointer Size (MemoryAllocationCall)

Description

Identify occurrences in application model where:

- the <MemoryAllocationCall> call to a memory allocation primitive
- uses the length parameter based on datatype pointer size

The list of memory allocation primitives is technology, framework, language dependent. For example with C-type languages: malloc, calloc, realloc.

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

```
DataType id="dt1"  
PointerType id="pt1"  
  ItemUnit id="iu1" type="dt1"  
IntegerType id="it1"  
ControlElement id="ce1" name="malloc|calloc|realloc|..." type="ce1_signature"  
  Signature id="ce1_signature"  
    ParameterUnit id="pul" type="it1" kind="byValue"  
    ParameterUnit id="pul" type="pt1" kind="return"  
  ...  
...  
StorableUnit id="su1" type="it1"  
StorableUnit id="su2" type="pt1"  
StorableUnit id="su3" type="it1"  
...  
ActionElement id="ae1" kind="Sizeof"  
  Writes "su1"  
  Reads "su2" | UsesType "pt1"  
ActionElement id="ae2" kind="Multiply"  
  Reads "su1"  
  Reads ...  
  Writes "su3"  
ActionElement id="ae1" kind="Call|PtrCall|MethodCall|VirtualCall"  
  Reads "su3"  
  Calls "ce1"
```

What to report

Roles to report:

- the <MemoryAllocationCall> call to a memory allocation primitive

8.73 ASCQM Ban Buffer Size Computation Based on Incorrect String Length Value

Descriptor

ASCQM Ban Buffer Size Computation Based on Incorrect String Length Value (MemoryAllocationCall, LengthComputation)

Description

Identify occurrences in application model where:

- the <MemoryAllocationCall> call to a memory allocation primitive
- uses the length parameter based on the incorrect <LengthComputation> string length computation where 1 is added to the string address and not the result of the call

The list of memory allocation primitives is technology, framework, language dependent. For example with C-type languages: malloc, calloc, realloc.

The list of string length computation primitives is technology, framework, language dependent. For example with C-type languages: strlen.

e.g.: `new_name = (char*)malloc(strlen(name+1));`

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

```
StringType id="st1"
PointerType id="pt1"
IntegerType id="it1"
...
ControlElement id="ce1" name="strlen|..." type="ce2_signature"
  Signature id="ce2_signature"
    ParameterUnit id="pu3" type="pt1"
    ParameterUnit id="pu4" type="it1" kind="return"
  ...
ControlElement id="ce2" name="malloc|calloc|realloc|..." type="ce1_signature"
  Signature id="ce1_signature"
    ParameterUnit id="pu1" type="it1" kind="byValue"
    ParameterUnit id="pu1" type="pt1" kind="return"
  ...
Value id="v1" name="1" type="it1"
StorableUnit id="su1" type="st1"
StorableUnit id="su2" type="pt1"
StorableUnit id="su3" type="it1"
...
ActionElement id="ae1" kind="Add"
  Reads "su1"
  Reads "v1"
  Writes "su2"
ActionElement id="ae2" kind="PtrCall|Call|MethodCall|VirtualCall"
  Reads "su1"
  Writes "su3"
  Calls "ce1"
ActionElement id="ae3" kind="Call|PtrCall|MethodCall|VirtualCall"
```

ISO/IEC 5055:2021(E)

Reads "su3"
Calls "ce2"

What to report

Roles to report:

- the <MemoryAllocationCall> call to a memory allocation primitive
- the <LengthComputation> string length computation

8.74 ASCQM Ban Sequential Acquisitions of Single Non-Reentrant Lock

Descriptor

ASCQM Ban Sequential Acquisitions of Single Non-Reentrant Lock (FirstLockAcquisitionStatement, SecondLockAcquisitionStatement)

Description

Identify occurrences in application model where:

- the <FirstLockAcquisitionStatement> lock acquisition statement
- is followed by the <SecondLockAcquisitionStatement> lock acquisition statement
- on a single lock
- without any lock release statement in between

The locking mechanism is technology, framework, and language dependent.
Reentrant locks are excluded.

KDM outline illustration

KDM elements present in the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
PlatformModel
  DeployedResource id="dr1"
  ...
  LockResource id="lr1"
  ...
  PlatformAction id="pa2" kind="lock" implementation="ae1 ae5"
    ManagesResource|ReadsResource|WritesResource "lr1"
  ...
CodeModel
  ...
  ActionElement id="ae1" kind="PlatformAction"
    Flows "ae2"
  ActionElement id="ae2" ...
    Flows "ae3"
  ActionElement id="ae3" ...
    Flows "ae4"
  ActionElement id="ae4" ...
    Flows "ae5"
  ActionElement id="ae5" kind="PlatformAction"
  ...
```

KDM elements absent from the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
PlatformModel
  DeployedResource id="dr1"
  ...
```

```
LockResource id="lr1"
...
PlatformAction id="pa2" kind="lock" implementation="ae1 ae5"
  ManagesResource|ReadsResource|WritesResource "lr1"
PlatformAction id="pa3" kind="unlock" implementation="ae3"
  ManagesResource|ReadsResource|WritesResource "lr1"
...
CodeModel
...
ActionElement id="ae1" kind="PlatformAction"
  Flows "ae2"
ActionElement id="ae2" ...
  Flows "ae3"
ActionElement id="ae3" kind="PlatformAction"
  Flows "ae4"
ActionElement id="ae4" ...
  Flows "ae5"
ActionElement id="ae5" kind="PlatformAction"
...
```

What to report

Roles to report are:

- the <FirstLockAcquisitionStatement> lock acquisition statement
- the <SecondLockAcquisitionStatement> lock acquisition statement

8.75 ASCQM Initialize Variables

Descriptor

ASCQM Initialize Variables (PathFromVariableDeclaration, VariableDeclarationStatement)

Description

Identify occurrences in application model where:

- the <PathFromVariableDeclaration> path
- from the <VariableDeclarationStatement> variable declaration statement
- lacks a variable initialization statement

KDM outline illustration

KDM elements present in the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
...
StorableUnit id="su1"
...
```

KDM elements absent from the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
...
ActionElement id="ae1" kind="Assign"
  Writes "su1"
  Flows "ae2"
...
```

ISO/IEC 5055:2021(E)

What to report

Roles to report are

- the <PathFromVariableDeclaration> path
- the <VariableDeclarationStatement> variable declaration statement

8.76 ASCQM Ban Allocation of Memory with Null Size

Descriptor

ASCQM Ban Allocation of Memory with Null Size (MemoryAllocationCall)

Description

Identify occurrences in application model where:

- the <MemoryAllocationCall> call to a memory allocation primitive
- uses a zero length parameter

The list of memory allocation primitives is technology, framework, language dependent. For example with C-type languages: malloc, calloc, realloc.

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

```
PointerType id="pt1"
IntegerType id="it1"
Value id="v1" type="it1" name="0"
ControlElement id="ce1" name="malloc|calloc|realloc|..." type="ce1_signature"
  Signature id="ce1_signature"
    ParameterUnit id="pul" type="it1" kind="byValue"
    ParameterUnit id="pul" type="pt1" kind="return"
  ...
...
ActionElement id="ae1" kind="Call|PtrCall|MethodCall|VirtualCall"
  Reads "v1"
  Calls "ce1"
```

What to report

Roles to report

- the <MemoryAllocationCall> call to a memory allocation primitive

8.77 ASCQM Ban Double Free on Pointers

Descriptor

ASCQM Ban Double Free On Pointers (PathToPointerReleaseFromPointerRelease, FirstPointerReleaseStatement, SecondPointerReleaseStatement)

Description

Identify occurrences in application model where:

- the <PathToPointerReleaseFromPointerRelease> path
- from the <FirstPointerReleaseStatement> pointer release statement
- to the <SecondPointerReleaseStatement> pointer release statement

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

```
ClassUnit|IntegerType|DecimalType|FloatType|StringType|VoidType|... id="dt1"  
PointerType id="pt1"  
    ItemUnit id="pi1" type="dt1"  
StorableUnit id="su1" type="pt1"  
...  
ActionElement id="ae1" name="free|delete|..."  
    Addresses "pt1"  
    Flows "ae2"  
ActionElement id="ae2"  
    Flows "ae3"  
ActionElement id="ae3" name="free|delete|..."  
    Addresses "pt1"  
...
```

or

```
ClassUnit|IntegerType|DecimalType|FloatType|StringType|VoidType|... id="dt1" name="dt1"  
PointerType id="pt1" name="pt1"  
    ItemUnit id="iu1" type="dt1" ext="dt1 & pt1"  
StorableUnit id="su1" type="dt1"  
StorableUnit id="su2" type="pt1"  
    HasType "pt1"  
    HasValue "su1"  
...  
ActionElement id="ae1" name="free|delete|...|push_back|..."  
    Addresses "su1"  
    Flows "ae2"  
ActionElement id="ae2"  
    Flows "ae3"  
ActionElement id="ae3" name="free|delete|...|push_back|..."  
    Addresses "su1"
```

What to report

Roles to report:

- the <PathToPointerReleaseFromPointerRelease> path
- the <FirstPointerReleaseStatement> pointer release statement
- the <SecondPointerReleaseStatement> pointer release statement

8.78 ASCQM Initialize Variables before Use

Descriptor

ASCQM Initialize Variables before Use (PathToVariableAccessFromVariableDeclaration, VariableDeclarationStatement, VariableAccessStatement)

Description

Identify occurrences in application model where:

- the <PathToVariableAccessFromVariableDeclaration> path
- from the <VariableDeclarationStatement> variable declaration statement
- to the <VariableAccessStatement> variable access statement
- lacks a variable initialization statement

excluding pointers and platform resources

ISO/IEC 5055:2021(E)

KDM outline illustration

KDM elements present in the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
...  
StorableUnit id="su1"  
...  
ActionElement id="ae2" ...  
    Flows "ae3"  
ActionElement id="ae3"  
    Reads "su1"  
    ...  
...
```

KDM elements absent from the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
...  
ActionElement id="ae1" kind="Assign"  
    Writes "su1"  
    Flows "ae2"  
...
```

What to report

Roles to report are:

- the <PathToVariableAccessFromVariableDeclaration> path
- the <VariableDeclarationStatement> variable declaration statement
- the <VariableAccessStatement> variable access statement

8.79 ASCQM Ban Self Assignment

Descriptor

ASCQM Ban Self Assignment (SelfAssignmentStatement)

Description

Identify occurrences in application model where:

- the <SelfAssignmentStatement> assignment statement
- assign one's variable to itself

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

```
...  
StorableUnit id="su1"  
...  
ActionElement id="ae1" kind="Assign"  
    Reads "su1"  
    Writes "su1"...
```

What to report

Roles to report:

- the <SelfAssignmentStatement> assignment statement

8.80 ASCQM Check Boolean Variables are Updated in Different Conditional Branches before Use

Descriptor

ASCQM Check Boolean Variables are Updated in Different Conditional Branches before Use (Boolean, Condition)

Description

Identify occurrences in application model where:

- the <Boolean> variable
- is used in the <Condition> condition
- but its value is never assigned in different branches of conditional statements

KDM outline illustration

KDM elements present in the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
BooleanType id="booleanType"  
...  
StorableUnit id="su1" type="booleanType"  
...  
ActionElement id="ae1" kind="Condition"  
  Reads "su1"
```

KDM elements absent from the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
ActionElement id="ae2" kind="Condition"  
  ...  
  TrueFlow "tf1"  
  FalseFlow "ff1"  
  ...  
ActionElement id="tf1" kind="Compound"  
  ...  
  ActionElement id="ae3" kind="Assign"  
    Writes "su1"  
  ...  
ActionElement id="ff1" kind="Compound"  
  ...  
  ActionElement id="ae4" kind="Assign"  
    Writes "su1"  
  ...
```

or

```
ActionElement id="ae2" kind="Switch"  
  ...  
  GuardedFlow "gf1"  
  GuardedFlow | FalseFlow "gf2"  
  ...  
ActionElement id="gf1" kind="Compound"  
  ...  
  ActionElement id="ae3" kind="Assign"  
    Writes "su1"  
  ...  
ActionElement id="gf2" kind="Compound"  
  ...
```

ISO/IEC 5055:2021(E)

```
ActionElement id="ae4" kind="Assign"  
  Writes "su1"  
  ...
```

What to report

Roles to report:

- the <Boolean> variable
- the <Condition> condition

8.81 ASCQM Ban Not Operator on Operand of Bitwise Operation

Descriptor

ASCQM Ban Not Operator On Operand Of Bitwise Operation (BitwiseExpression)

Description

Identify occurrences in application model where:

- the <BitwiseExpression> bitwise expression with a not operator on one of the operand

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

```
IntegerType|BitstringType|OctetstringType id="dt1"  
StorableUnit id="su1" type="dt1"  
...  
StorableUnit id="su2" kind="register"  
ActionElement id="ae1" kind="Not"  
  Reads "su1"  
  Writes "su2"  
  Flows "ae2"  
ActionElement id="ae2" kind="BitAnd|BitOr|BitXor"  
  Reads "su2"  
  Reads ...
```

What to report

Roles to report are:

- the <BitwiseExpression> bitwise expression

8.82 ASCQM Ban Not Operator on Non-Boolean Operand of Comparison Operation

Descriptor

ASCQM Ban Not Operator On Non-Boolean Operand Of Comparison Operation (ComparisonExpression)

Description

Identify occurrences in application model where:

- the <ComparisonExpression> comparison expression with a not operator on one of the non-boolean operand

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

```
IntegerType|DecimalType|FloatType|StringType|PointerType|ClassUnit|... id="dt1"  
StorableUnit id="su1" type="dt1"  
...  
StorableUnit id="su2" kind="register"  
ActionElement id="ae1" kind="Not"  
  Reads "su1"  
  Writes "su2"  
  Flows "ae2"  
ActionElement id="ae2"  
kind="Equals|NotEqualTo|GreaterThan|GreaterThanOrEqual|LessThan|LessThanOrEqual"  
  Reads "su2"  
  Reads ...
```

What to report

Roles to report are:

- the <ComparisonExpression> comparison expression

8.83 ASCQM Ban Incorrect Joint Comparison

Descriptor

ASCQM Ban Incorrect Joint Comparison (JointComparisonExpression)

Description

Identify occurrences in application model where

- the <JointComparisonExpression> joint comparison expression is one of the following: != || != or == || != or == && == or == && !=

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

```
StorableUnit id="su1" kind="register"  
StorableUnit id="su2" kind="register"  
...  
ActionElement id="ae1" kind="NotEqual"  
  ...  
  Writes "su1"  
ActionElement id="ae2" kind="NotEqual"  
  ...  
  Writes "su2"  
ActionElement id="ae3" kind="Or"  
  Reads "su1"  
  Reads "su2"  
  ...
```

or

```
StorableUnit id="su1" kind="register"  
StorableUnit id="su2" kind="register"  
...  
ActionElement id="ae1" kind="Equals"  
  ...  
  Writes "su1"  
ActionElement id="ae2" kind="NotEqual"
```

ISO/IEC 5055:2021(E)

```
...
Writes "su2"
ActionElement id="ae3" kind="Or"
Reads "su1"
Reads "su2"
...
```

or

```
StorableUnit id="su1" kind="register"
StorableUnit id="su2" kind="register"
...
ActionElement id="ae1" kind="Equals"
...
Writes "su1"
ActionElement id="ae2" kind="Equals"
...
Writes "su2"
ActionElement id="ae3" kind="And"
Reads "su1"
Reads "su2"
...
```

or

```
StorableUnit id="su1" kind="register"
StorableUnit id="su2" kind="register"
...
ActionElement id="ae1" kind="Equals"
...
Writes "su1"
ActionElement id="ae2" kind="NotEqual"
...
Writes "su2"
ActionElement id="ae3" kind="And"
Reads "su1"
Reads "su2"
...
```

What to report

Roles to report are:

- the <JointComparisonExpression> joint comparison expression

8.84 ASCQM Secure XML Parsing with Secure Options

Descriptor

ASCQM Secure XML Parsing with Secure Options (XMLParsingCall, DTDProcessingDisablingOption)

Description

Identify occurrences in application model where:

- the <XMLParsingCall> call to an XML parsing method, function, procedure, ...
- does not use its <DTDProcessingDisablingOption> DTD processing disabling capability

The list of XML parsing primitives is technology, framework, language dependent. For example, in Java: SchemaFactory, JAXP DocumentBuilderFactory, SAXParserFactory, XMLReader.

The list of option(s) to disable DTD processing is primitive dependent. E.g. with XMLReader: set disallow-doctype-decl feature to true and external-general-entities and external-parameter-entities features to false.

Cf. [https://www.owasp.org/index.php/XML_External_Entity_\(XXE\)_Prevention_Cheat_Sheet](https://www.owasp.org/index.php/XML_External_Entity_(XXE)_Prevention_Cheat_Sheet)

KDM outline illustration

KDM elements present in the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
ControlElement id="ce1"
name="xmlCtxtReadDoc|xmlCtxtReadFd|xmlCtxtReadFile|xmlCtxtReadIO|xmlCtxtReadMemory|xmlCtxt
UseOptions|xmlParseInNodeContext|xmlReadDoc|xmlReadFd|xmlReadFile|xmlReadIO|xmlReadMemory|
..." type="cel_signature"
  Signature id="ce1_signature"
    ...
    ParameterUnit id="pu1" name="options|..."
  ...
...
ActionElement id="ae3" kind="Call|PtrCall|MethodCall|VirtualCall"
  ...
  Calls "ce1"
```

or

```
ClassUnit id="cu1"
name="SchemaFactory|DocumentBuilderFactory|SAXParserFactory|XMLReader|..."
  MethodUnit id="mu1" name="newSchema|..."
  ...
  MethodUnit id="mu2" name="setProperty|setAttribute|setFeature|..."
type="mu2_signature"
  Signature id="mu2_signature"
    ParameterUnit id="pu1" name="name|property|attribute|feature|..."
    ParameterUnit id="pu2" name="value|..."
  ...
ActionElement id="ae3" kind="Call|PtrCall|MethodCall|VirtualCall"
  ...
  Calls "mu1"
```

KDM elements absent from the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
...
StorableUnit id="su1" attribute="DTD_disable"
...
ActionElement id="ae3" kind="Call|PtrCall|MethodCall|VirtualCall"
  ...
  Calls "ce1"
  ...
  Reads "su1"
```

or

```
...
StorableUnit id="su1" attribute="DTD_processing"
StorableUnit id="su2" attribute="disable"
...
ActionElement id="ae3" kind="Call|PtrCall|MethodCall|VirtualCall"
  ...
  Calls "mu2"
  Reads "su1"
  Reads "su2"
...
```

ISO/IEC 5055:2021(E)

What to report

Roles to report:

- the <XMLParsingCall> call to an XML parsing function, procedure, method, ...
- the <DTDProcessingDisablingOption> DTD processing disabling option(s)

8.85 ASCQM Secure Use of Unsafe XML Processing with Secure Parser

Descriptor

ASCQM Secure Use of Unsafe XML Processing with Secure Parser (XMLProcessingCall)

Description

Identify occurrences in application model where:

- the <XMLProcessingCall> call to an XML processing method, function, procedure, ... without DTD processing disabling capabilities
- is not preceded by a call to a secure XML parser

The list of XML processing primitives without DTD processing disabling capabilities is technology, framework, language dependent. For example in Java: JAXB Unmarshaller, XPathExpression.

The list of XML parsing primitives with DTD processing disabling capabilities is technology, framework, language dependent. For example in Java: DocumentBuilder.

The list of option(s) to disable DTD processing is primitive dependent. For example with SAXParserFactory: set external-general-entities, external-parameter-entities, and load-external-dtd features to false.

Cf. [https://www.owasp.org/index.php/XML_External_Entity_\(XXE\)_Prevention_Cheat_Sheet](https://www.owasp.org/index.php/XML_External_Entity_(XXE)_Prevention_Cheat_Sheet)

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

```
ClassUnit id="cu1" name="Unmarshaller|XPathExpression|...
  MethodUnit id="mu1" name="unmarshall|evaluate|..."
  ...
...
StorableUnit id="su1"
...
ActionElement id="ae2" kind="MethodCall"
  Reads "su1"
  Calls "mu1"
```

KDM elements absent from the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
ClassUnit id="cu2" name="DocumentBuilder|...
  MethodUnit id="mu2" name="parse|..."
...
ActionElement id="ae1" kind="MethodCall"
  ...
  Calls "mu2"
  Writes "su1"
  Flows "ae2"
...
```

What to report

Roles to report:

- the <XMLProcessingCall> call to an XML processing method, function, procedure, ... without DTD processing
disabling capabilities

8.86 ASCQM Sanitize User Input used in Path Manipulation

Descriptor

ASCQM Sanitize User Input used in Path Manipulation (PathFromUserInputToPathManipulation, UserInput, PathManipulationStatement, PathManipulationStatementSanitizationControlElementList)

Description

Identify occurrences in application model where:

- the <PathFromUserInputToPathManipulation> path
- from the <UserInput> user interface input
- to the <PathManipulationStatement> file path manipulation statement,
- lacks a sanitization operation from the <PathManipulationStatementSanitizationControlElementList> list of vetted
sanitization.

The list of vetted sanitization primitives is an input to provide to the measurement process.

The list of file manipulation primitives is technology, framework, language dependent. For example with C-type languages: File, FileInputStream, open.

KDM outline illustration

KDM elements present in the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
PlatformModel
  FileResource id="fr1"
  ...
UIModel
  UIField id="uf1"

    Flow "ae4"
  ActionElement id="ae4"
    Flow "ae5"
  ActionElement id="ae5" kind="Data"
    ManagesResource|ReadsResource|WritesResource "fr1"
  ...
```

ISO/IEC 5055:2021(E)

KDM elements absent from the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
ControlElement id="ce1" kind="sanitization"  
...  
ActionElement id="ae3" kind="Call|PtrCall|MethodCall|VirtualCall"  
    Flow "ae4"  
    Calls "ce1"  
    Reads "su2"  
    Writes "su2"  
...
```

What to report

Roles to report are:

- the <PathFromUserInputToPathManipulation> path
- the <UserInput> user interface input
- the <PathManipulationStatement> file path manipulation statement,
- the <PathManipulationStatementSanitizationControlElementList> list of vetted sanitization.

8.87 ASCQM Sanitize User Input used in SQL Access

Descriptor

ASCQM Sanitize User Input used in SQL Access (PathFromUserInputToSQLStatement, UserInput, SQLStatement, SQLStatementSanitizationControlElementList)

Description

Identify occurrences in application model where:

- the <PathFromUserInputToSQLStatement> path
- from the <UserInput> user interface input
- to the <SQLStatement> SQL statement,
- lacks a sanitization operation from the <SQLStatementSanitizationControlElementList> list of vetted sanitization.

The list of vetted sanitization primitives is an input to provide to the measurement process.

SQL is not limited to traditional RDBMS SQL, it covers all data management capabilities. For example: NoSQL databases.

    Calls "ce1"
    Reads "su2"
    Writes "su2"
...

```

What to report

Roles to report are:

- the <PathFromUserInputToSQLStatement> path
- the <UserInput> user interface input
- the <SQLStatement> SQL statement,
- the <SQLStatementSanitizationControlElementList> list of vetted sanitization.

8.88 ASCQM Sanitize User Input used in Document Manipulation Expression

Descriptor

ASCQM Sanitize User Input used in Document Manipulation Expression
(PathFromUserInputToDocumentManipulation, UserInput, DocumentManipulationExpression,
DocumentManipulationSanitizationControlElementList)

Description

Identify occurrences in application model where:

- the <PathFromUserInputToDocumentManipulation> path
- from the <UserInput> user interface input
- to the <DocumentManipulationExpression> document manipulation expression,
- lacks a sanitization operation from the <DocumentManipulationSanitizationControlElementList> list of vetted sanitization.

The list of vetted sanitization primitives is an input to provide to the measurement process.

ISO/IEC 5055:2021(E)

The list of document manipulation primitives is technology, framework, and language dependent. For example: XQuery

KDM outline illustration

  Calls "ce2"
  Reads "su2"
  Writes "su2"
...
```

What to report

Roles to report are:

- the <PathFromUserInputToDocumentManipulation> path
- the <UserInput> user interface input
- the <DocumentManipulationExpression> document manipulation expression,
- the <DocumentManipulationSanitizationControlElementList> list of vetted sanitization.

8.89 ASCQM Sanitize User Input used in Document Navigation Expression

Descriptor

ASCQM Sanitize User Input used in Document Navigation Expression
(PathFromUserInputToDocumentNavigationEvaluation, UserInput,
DocumentNavigationEvaluationExpression, DocumentNavigationSanitizationControlElementList)

Description

Identify occurrences in application model where:

- the <PathFromUserInputToDocumentNavigationEvaluation> path
- from the <UserInput> user interface input
- to the <DocumentNavigationEvaluationExpression> document navigation evaluation expression,
- lacks a sanitization operation from the <DocumentNavigationSanitizationControlElementList> list of vetted sanitization.

The list of vetted sanitization primitives is an input to provide to the measurement process.

The list of document navigation expression evaluation primitives is technology, framework, language dependent. For example with Java language: javax.xml.xpath.evaluate, javax.xml.xpath.XPath.evaluateExpression.

    Flow "ae4"  
    Calls "ce2"  
    Reads "su2"  
    Writes "su2"  
...
```

What to report

Roles to report are:

- the <PathFromUserInputToDocumentNavigationEvaluation> path
- the <UserInput> user interface input
- the <DocumentNavigationEvaluationExpression> document navigation evaluation expression,
- the <DocumentNavigationSanitizationControlElementList> list of vetted sanitization.

8.90 ASCQM Sanitize User Input used to access Directory Resources

Descriptor

ASCQM Sanitize User Input used to access Directory Resources
(PathFromUserInputToExecuteRunTimeCommand, UserInput, DirectoryAccessStatement,
DirectoryAccessStatementSanitizationControlElementList)

Description

Identify occurrences in application model where:

- the <PathFromUserInputToExecuteRunTimeCommand> path
- from the <UserInput> user interface input
- to the <DirectoryAccessStatement> directory access statement,
- lacks a sanitization operation from the <DirectoryAccessStatementSanitizationControlElementList>
list of vetted
sanitization.

The list of vetted sanitization primitives is an input to provide to the measurement process.

```

What to report

Roles to report are:

- the <PathFromUserInputToExecuteRunTimeCommand> path
- the <UserInput> user interface input
- the <DirectoryAccessStatement> directory access statement,
- the <DirectoryAccessStatementSanitizationControlElementList> list of vetted sanitization.

8.91 ASCQM Sanitize Stored Input used in User Output

Descriptor

ASCQM Sanitize Stored Input used in User Output (PathFromUserInputToStorageStatement, UserInput, StorageStatement, PathFromRetrievalStatementToUserDisplay, RetrievalStatement, UserDisplay, CrossSiteScriptingSanitizationControlElementList)

Description

Identify occurrences in application model where:

- the <PathFromUserInputToStorageStatement> path
- from the <UserInput> user interface input
- to the <StorageStatement> data storage statement,
- and the <PathFromRetrievalStatementToUserDisplay> path
- from the <RetrievalStatement> data retrieval statement
- to the <UserDisplay> user interface display,
- lacks a sanitization operation from the <CrossSiteScriptingSanitizationControlElementList> list of vetted sanitization.

The list of vetted sanitization primitives is an input to provide to the measurement process.

ISO/IEC 5055:2021(E)

Roles to report are:

- the <PathFromUserInputToExecuteRunTimeCommand> path
- the <UserInput> user interface input
- the <ExecuteRunTimeCommandStatement> system command,
- the <ExecuteRunTimeCommandStatementSanitizationControlElementList> list of vetted sanitization.

8.94 ASCQM Ban Use of Deprecated Libraries

Descriptor

ASCQM Ban Use of Deprecated Libraries (CallStatement, DeprecatedLibrary)

Description

Identify occurrences in application model where:

- the <CallStatement> call statement targets an operation
- from the <DeprecatedLibrary> deprecated library

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

```
Module id="m1" attribute="deprecated"  
  ...  
  CallableUnit id="cu1" | MethodUnit id="mu1"  
  ...  
ActionElement id="ae1" kind="Call|PtrCall|MethodCall|VirtualCall"  
  Calls "cu1|mu1"
```

ISO/IEC 5055:2021(E)

What to report

Roles to report:

- the <CallStatement> call statement
- the <DeprecatedLibrary> deprecated library

8.95 ASCQM Sanitize User Input used as Array Index

Descriptor

ASCQM Sanitize User Input used as Array Index (PathFromUserInputToArrayAccess, UserInput, ArrayAccessStatement)

Description

Identify occurrences in application model where:

- the <PathFromUserInputToArrayAccess> path
- from the <UserInput> user interface input
- to the <ArrayAccessStatement> array access statement,
- lacks a range check operation

KDM outline illustration

KDM elements present in the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
UIModel
  UIField id="uf1"
  UIAction id="ua1" implementation="ae1" kind="input"
    ReadsUI "uf1"
  ...
CodeModel
  ...
  StorableUnit id="su1"
  StorableUnit id="su2"
  ArrayType id="at1"
  StorableUnit id="su3" type="at1"
  ActionElement id="ae1" kind="UI"
    Writes "su1"
    Flow "ae2"
  ActionElement id="ae2"
    Flow "ae3"
    Reads "su1"
    Writes "su2"
  ActionElement id="ae3"
    Flow "ae4"
  ActionElement id="ae4"
    Flow "ae5"
  ActionElement id="ae5" kind="ArraySelect|ArrayReplace"
    Addresses "su3"
    Reads "su2"
    Reads|Writes ...
  ...
```

KDM elements absent from the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
ActionElement id="ae2" kind="GreaterThan|GreaterThanOrEqual"
  Reads "su2"
  Reads ...
  ...
```

```
ActionElement id="ae3" kind="LessThan|LessThanOrEqual"  
  Reads "su2"  
  Reads ...  
...
```

What to report

Roles to report are:

- the <PathFromUserInputToArrayAccess> path
- the <UserInput> user interface input
- the <ArrayAccessStatement> array access statement,

8.96 ASCQM Check Input of Memory Allocation Primitives

Descriptor

ASCQM Check Input of Memory Allocation Primitives (MemoryAllocationCall)

Description

Identify occurrences in application model where:

- the <MemoryAllocationCall> call to a memory allocation primitive
- uses the length parameter without range checking its value

The list of memory allocation primitives is technology, framework, language dependent. For example with C-type languages: malloc, calloc, realloc.

KDM outline illustration

KDM elements present in the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
PointerType id="pt1"  
IntegerType id="it1"  
ControlElement id="ce1" name="malloc|calloc|realloc|..." type="ce1_signature"  
  Signature id="ce1_signature"  
    ParameterUnit id="pu1" type="it1" kind="byValue"  
    ParameterUnit id="pu1" type="pt1" kind="return"  
  ...  
...  
StorableUnit id="su1" type="it1"  
...  
ActionElement id="ae1" kind="Call|PtrCall|MethodCall|VirtualCall"  
  Reads "su1"  
  Calls "ce1"
```

KDM elements absent from the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
ActionElement id="ae2" kind="GreaterThan|GreaterThanOrEqual"  
  Reads "su1"  
  Reads ...  
...  
ActionElement id="ae3" kind="LessThan|LessThanOrEqual"  
  Reads "su1"  
  Reads ...  
...
```

ISO/IEC 5055:2021(E)

What to report

Roles to report:

- the <MemoryAllocationCall> call to a memory allocation primitive

8.97 ASCQM Sanitize User Input used as String Format

Descriptor

ASCQM Sanitize User Input used as String Format (PathFromUserInputToFormatStatement, UserInput, FormatStatement, FormatStatementSanitizationControlElementList)

Description

Identify occurrences in application model where:

- the <PathFromUserInputToFormatStatement> path
- from the <UserInput> user interface input
- to the <FormatStatement> formatting statement,
- lacks a sanitization operation from the <FormatStatementSanitizationControlElementList> list of vetted sanitization.

The list of vetted sanitization primitives is an input to provide to the measurement process.

The list of string format primitives is technology, framework, language dependent. For example with C-type languages: printf, snprintf.

KDM outline illustration

KDM elements present in the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
UIModel

    Flow "ae4"
    Calls "ce2"
    Reads "su2"
    Writes "su2"
...
```

What to report

Roles to report are:

- the <PathFromUserInputToFormatStatement> path
- the <UserInput> user interface input
- the <FormatStatement> formatting statement,
- the <FormatStatementSanitizationControlElementList> list of vetted sanitization.

8.98 ASCQM Sanitize User Input used in Loop Condition

Descriptor

ASCQM Sanitize User Input used in Loop Condition (PathFromUserInputToLoopCondition, UserInput, LoopConditionStatement)

Description

Identify occurrences in application model where:

- the <PathFromUserInputToLoopCondition> path
- from the <UserInput> user interface input
- to the <LoopConditionStatement> loop condition,
- lacks a range check operation

KDM outline illustration

KDM elements present in the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
UIModel
    UIField id="uf1"
    UIAction id="ua1" implementation="ae1" kind="input"

        Reads "su2"
        ...
        Writes "del"
        ActionElement id="ae7" kind="Condition"
            Reads "del"
            TrueFlow "tf1"
            FalseFlow "ff1"
        ActionElement id="ff1" ...
    ...
```

KDM elements absent from the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
ActionElement id="ae2" kind="GreaterThan|GreaterThanOrEqual"  
  Reads "su2"  
  Reads ...  
  ...  
ActionElement id="ae3" kind="LessThan|LessThanOrEqual"  
  Reads "su2"  
  Reads ...  
  ...
```

What to report

Roles to report are:

- the <PathFromUserInputToLoopCondition> path
- the <UserInput> user interface input
- the <LoopConditionStatement> loop condition,

8.99 ASCQM Sanitize User Input used as Serialized Object

Descriptor

ASCQM Sanitize User Input used as Serialized Object (PathFromUserInputToDeserialization, UserInput, DeserializationStatement, DeserializationStatementSanitizationControlElementList)

Description

Identify occurrences in application model where:

- the <PathFromUserInputToDeserialization> path
- from the <UserInput> user interface input
- to the <DeserializationStatement> deserialization statement,
- lacks a sanitization operation from the <DeserializationStatementSanitizationControlElementList> list of vetted sanitization.

The list of vetted sanitization primitives is an input to provide to the measurement process.

The list of deserialization primitives is technology, framework, language dependent. For example in Java: XMLdecoder, readObject, readExternal.

KDM outline illustration

KDM elements present in the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
UIModel  
  UIField id="uf1"  
  UIAction id="ua1" implementation="ae1" kind="input"  
    ReadsUI "uf1"  
  ...  
CodeModel  
  ...  
  StorableUnit id="su1"  
  StorableUnit id="su2"  
  ActionElement id="ae1" kind="UI"  
    Writes "su1"  
    Flow "ae2"  
  ActionElement id="ae2"  
    Flow "ae3"
```

ISO/IEC 5055:2021(E)

```
    Reads "su1"
    Writes "su2"
  ActionElement id="ae3"
    Flow "ae4"
  ActionElement id="ae4"
    Flow "ae5"
  ActionElement id="ae5" kind="Data"
    ManagesResource|ReadsResource|WritesResource "fr1"
  ...

```
ControlElement id="cel" kind="sanitization"
...
ActionElement id="ae3" kind="Call|PtrCall|MethodCall|VirtualCall"
  Flow "ae4"
  Calls "cel"
  Reads "su2"
  Writes "su2"
...
```

What to report

Roles to report are:

- the <PathFromUserInputToDeserialization> path
- the <UserInput> user interface input
- the <DeserializationStatement> deserialization statement,
- the <DeserializationStatementSanitizationControlElementList> list of vetted sanitization.

8.100 ASCQM Log Caught Security Exceptions

Descriptor

ASCQM Log Caught Security Exceptions (Method, SecurityException, MethodCall, CatchStatement)

Description

Identify occurrences in application model where:

- the <Method> method
- declared as throwing the <SecurityException> security exception
- is called in the <MethodCall> method call
- which catches exceptions of type <SecurityException> in the <CatchStatement> catch statement
- but does not log it

List of security exception is technology, framework, and language dependent. For example in Java: java.security.GeneralSecurityException and its dependent classes.

KDM outline illustration

KDM elements present in the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
...
ClassUnit id="cu1" name="GeneralSecurityException|..."
...
ClassUnit id="cu2"
  Extends "cu1"
```

```
...
MethodUnit id="mul" type="mul_signature"
  Signature id="mul_signature"
    ParameterUnit id="pu1" type="cu1" kind="throws"
    ...
...
TryUnit id="t1"
  ...
  ActionElement id="ae1" kind="MethodCall"
    Calls "mul"
  ...
  ExceptionFlow "c1"
...
CatchUnit id="c1"
  ParameterUnit id="pu2" type="cu1"
  ...
...
```

KDM elements absent from the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
PlatformModel
  FileResource id="fr1"
  ...
  PlatformAction id="pa1" kind="write" implementation="ae2"
    WritesResource "fr1"
...
CodeModel
  CatchUnit id="c1"
    ParameterUnit id="pu2" type="cu1"
    ...
    ActionElement id="ae2" kind="PlatformAction"
      Reads "pu2"
...
```

What to report

Roles to report are:

- the <Method> method
- the <SecurityException> security exception
- the <MethodCall> method call
- the <CatchStatement> catch statement

8.101 ASCQM Ban File Creation with Default Permissions

Descriptor

ASCQM Ban File Creation with Default Permissions (FileCreationStatement, Permission)

Description

Identify occurrences in application model where:

- the <FileCreationStatement> file creation statement with permission setting capabilities
- does not use its <Permission> permission option

The list of file creation primitives with permission setting capabilities is technology, framework, language dependent. For example: open from fcntl.h in C, os.open in python.

ISO/IEC 5055:2021(E)

KDM outline illustration

KDM elements present in the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
ControlElement id="ce1" name="open|..." type="ce1_signature"  
  Signature id="ce1_signature"

ActionElement id="ae1" kind="Call|PtrCall|MethodCall|VirtualCall"  
  Calls "ce1"  
  Reads ...  
  Reads ...  
  Reads ...
```

What to report

Roles to report:

- the <FileCreationStatement> file creation statement with permission setting capabilities
- the <Permission> permission option

8.102 ASCQM Ban Use of Prohibited Low-Level Resource Management Functionality

Descriptor

ASCQM Ban Use of Prohibited Low-Level Resource Management Functionality
(ResourceManagementPrimitiveCall, TechnologyStack)

Description

Identify occurrences in application model where:

- the <ResourceManagementPrimitiveCall> low-level resource management primitive call
- which is bypassing the resource management primitives provided by the <TechnologyStack> technology stack

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

```
CodeModel  
  Package id="p1"  
name="javax.ejb|javax.servlet|javax.jms|javax.faces|javax.xml.bind|javax.activation|javax.  
mail|..."

    Imports "p2"  
    ...  
    ActionElement id="ae1" kind="MethodCall" attribute="synchronized"  
    ...
```

ISO/IEC 5055:2021(E)

What to report

Roles to report:

- the <ResourceManagementPrimitiveCall> low-level resource management primitive call
- the <TechnologyStack> technology stack

8.103 ASCQM Ban Excessive Size of Index on Columns of Large Tables

Descriptor

ASCQM Ban Excessive Size of Index on Columns of Large Tables (Table, TotalSizeOfIndexes, MaxTotalSizeOfIndexes, MinNumberOfRows)

Description

Identify occurrences in application model where:

- the <Table> table
- with <TotalSizeOfIndexes> number of indexes
- which is greater than <MaxTotalSizeOfIndexes>
- and with more than <MinNumberOfRows>

The <MaxTotalSizeOfIndexes> value is a measurement parameter. Its default value is: 30

The <MinNumberOfRows> value is a measurement parameter. Its default value is: 1000000

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

```
DataModel
  RelationalSchema
    RelationalTable id="rt1"
      Index id="i1" implementation="iu1"
      Index id="i2" implementation="iu1 iu2"
      ...
      itemUnit id="iu1" type="dt1"
      itemUnit id="iu2" type="dt2"
  ...
CodeModel
  DataType id="dt1"
  DataType id="dt2"
  ...
```

The size of an Index is the size in bytes of the data types of the columns it relies on.

What to report

Roles to report:

- the <Table> table
- the <TotalSizeOfIndexes> value
- the <MaxTotalSizeOfIndexes> value
- the <MinNumberOfRows> value

8.104 ASCQM Implement Index Required by Query on Large Tables

Descriptor

ASCQM Implement Index Required by Query on Large Tables (Query, Table, Column, MinNumberOfRows)

Description

Identify occurrences in application model where:

- the <Query> query
- queries the <Table> table
- using the <Column> column(s)
- where the <Table> table has more than <MinNumberOfRows>
- but lacks a proper index

The <MinNumberOfRows> value is a measurement parameter. Its default value is: 1000000

KDM outline illustration

KDM elements present in the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
DataModel
  RelationalSchema
    RelationalTable id="rt1"
      itemUnit id="iu1"
    ...
    DataAction id="dal" kind="Select|Insert|Update|Delete"
      ...
      Reads "iu1"
      ...
    ...
  ...
```

KDM elements absent from the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
DataModel
  RelationalSchema
    RelationalTable id="rt1"
      Index id="i1" implementation="iu1"
      itemUnit id="iu1"
    ...
```

What to report

Roles to report:

- the <Query> query
- the <Table> table
- the <Column> column (list)
- the <MinNumberOfRows> value

ISO/IEC 5055:2021(E)

8.105 ASCQM Ban Excessive Number of Index on Columns of Large Tables

Descriptor

ASCQM Ban Excessive Number of Index on Columns of Large Tables (Table, NumberOfIndexes, MaxNumberOfIndexes, MinNumberOfRows)

Description

Identify occurrences in application model where:

- the <Table> table
- with <NumberOfIndexes> number of indexes
- which is greater than <MaxNumberOfIndexes>
- and with more than <MinNumberOfRows>

The <MaxNumberOfIndexes> value is a measurement parameter. Its default value is: 3

The <MinNumberOfRows> value is a measurement parameter. Its default value is: 1000000

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

```
DataModel
  RelationalSchema
    RelationalTable id="rt1"
      Index id="i1"
      Index id="i2"
      Index id="i3"
      Index id="i4"
      Index id="i5"
      Index id="i6"
  ...
```

What to report

Roles to report:

- the <Table> table
- the <NumberOfIndexes> value
- the <MaxNumberOfIndexes> value
- the <MinNumberOfRows> value

8.106 ASCQM Ban Excessive Complexity of Data Resource Access

Descriptor

ASCQM Ban Excessive Complexity of Data Resource Access (Query, NumberOfTables, MaxNumberOfTables, NumberOfSubqueries, MaxNumberOfSubqueries, MinNumberOfRows)

Description

Identify occurrences in application model where:

- the <Query> query
- with <NumberOfTables> number of tables or views
- which is greater than <MaxNumberOfTables>
- and with <NumberOfSubqueries> number of subqueries
- which is greater than <MaxNumberOfSubqueries>
- with at least one table or view with more than <MinNumberOfRows>

The <MaxNumberOfTables> value is a measurement parameter. Its default value is: 5
The <MaxNumberOfSubqueries> value is a measurement parameter. Its default value is: 3
The <MinNumberOfRows> value is a measurement parameter. Its default value is: 1000000

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

```
DataModel
  RelationalSchema
    RelationalTable|RelationalView id="cs1"
    RelationalTable|RelationalView id="cs2"
    RelationalTable|RelationalView id="cs3"
    RelationalTable|RelationalView id="cs4"

    RelationalTable|RelationalView id="cs6"
    ...
    DataAction id="da1" kind="Select|Insert|Update|Delete"
    ...
    ReadsColumnSet|WritesColumnSet "cs1"
    ReadsColumnSet|WritesColumnSet "cs2"
    ReadsColumnSet|WritesColumnSet "cs3"
    ReadsColumnSet|WritesColumnSet "cs4"
    ReadsColumnSet|WritesColumnSet "cs5"
    ReadsColumnSet|WritesColumnSet "cs6"
    ...
    DataAction id="da2" kind="Select"
    ...
    DataAction id="da3" kind="Select"
    ...
    DataAction id="da4" kind="Select"
    ...
    DataAction id="da5" kind="Select"
    ...
  ...
...
```

What to report

Roles to report:

- the <Query> query
- the <NumberOfTables> value
- the <MaxNumberOfTables> value
- the <NumberOfSubqueries> value
- the <MaxNumberOfSubqueries> value
- the <MinNumberOfRows> value

8.107 ASCQM Ban Expensive Operations in Loops

Descriptor

ASCQM Ban Expensive Operations in Loops (ResourceConsummingStatement, Loop)

ISO/IEC 5055:2021(E)

Description

Identify occurrences in application model where:

- the <ResourceConsumingStatement> resource consuming statement
- is used within the <Loop> loop.

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

...

```

What to report

Roles to report are:

- the <ResourceConsumingStatement> resource consuming statement
- the <Loop> loop.

8.108 ASCQM Limit Number of Aggregated Non-Primitive Data Types

Descriptor

ASCQM Limit Number of Aggregated Non-Primitive Data Types (Class, NumberOfNonPrimitiveMembers, MaxNumberOfNonPrimitiveMembers)

Description

Identify occurrences in application model where :

- the <Class> class
- with <NumberOfNonPrimitiveMembers> number of non-primitive members
- which is greater than <MaxNumberOfNonPrimitiveMembers>

The <MaxNumberOfNonPrimitiveMembers> value is a measurement parameter. Its default value is: 5

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

```
ClassUnit id="cu1"
ClassUnit id="cu2"
ClassUnit id="cu3"
ClassUnit id="cu4"
ClassUnit id="cu5"
ClassUnit id="cu6"
...
ClassUnit id="cu0"
  MemberUnit id="mu1" type="cu1"
  MemberUnit id="mu2" type="cu2"

```

ISO/IEC 5055:2021(E)

```
MemberUnit id="mu3" type="cu3"  
MemberUnit id="mu4" type="cu4"  
MemberUnit id="mu5" type="cu5"  
MemberUnit id="mu6" type="cu6"
```

...

What to report

Roles to report :

- the <Class> class
- the <NumberOfNonPrimitiveMembers> value
- the <MaxNumberOfNonPrimitiveMembers> value

8.109 ASCQM Ban Excessive Number of Data Resource Access from non-stored SQL Procedure

Descriptor

ASCQM Ban Excessive Number of Data Resource Access from non-stored SQL Procedure 8.2.108
(Function, NumberOfDataAccess, MaxNumberOfDataAccess)

Description

Identify occurrences in application model where:

- the <Function> SQL function is not a stored procedure
- with <NumberOfDataAccess> accesses to data resources
- which is greater than <MaxNumberOfDataAccess>

The <MaxNumberOfDataAccess> value is a measurement parameter. Its default value is: 5

KDM outline illustration

KDM elements present in the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
DataModel  
  RelationSchema id="rs1"  
  ...  
  CallableUnit id="cu1"  
  ...  
  ActionElement id="da1" kind="Select|Insert|Update|Delete"  
  ...  
  ActionElement id="da2" kind="Select|Insert|Update|Delete"  
  ...  
  ActionElement id="da3" kind="Select|Insert|Update|Delete"

  ActionElement id="da6" kind="Select|Insert|Update|Delete"  
  ...
```

KDM elements absent from the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
DataModel  
  RelationSchema id="rs1"
```

```
...  
CallableUnit id="cul" kind="stored"  
...
```

What to report

Roles to report:

- the <Function> function
- the <NumberOfDataAccess> value
- the <MaxNumberOfDataAccess> value

8.110 ASCQM Ban Excessive Number of Data Resource Access from non-SQL Code

Descriptor

ASCQM Ban Excessive Number of Data Resource Access from non-SQL Code
(FunctionProcedureOrMethod, NumberOfDataAccess, MaxNumberOfDataAccess)

Description

Identify occurrences in application model where:

- the <FunctionProcedureOrMethod> function, procedure, method, ...
- with <NumberOfDataAccess> accesses to data resources
- which is greater than <MaxNumberOfDataAccess>

The <MaxNumberOfDataAccess> value is a measurement parameter. Its default value is: 2

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

```
DataModel  
  RelationSchema id="rs1"  
    ...  
    ActionElement id="da1" kind="Select|Insert|Update|Delete" implementation="i1"  
    ActionElement id="da2" kind="Select|Insert|Update|Delete" implementation="i2"  
    ActionElement id="da3" kind="Select|Insert|Update|Delete" implementation="i3"  
  ...  
CodeModel  
  ...  
  CallableUnit id="cul" | MethodUnit id="mul"  
    ...  
    ActionElement id="i1"  
    ...  
    ActionElement id="i2"  
    ...  
    ActionElement id="i3"  
    ...  
  ...
```

What to report

Roles to report:

- the <FunctionProcedureOrMethod> function, procedure, method, ...
- the <NumberOfDataAccess> value
- the <MaxNumberOfDataAccess> value

ISO/IEC 5055:2021(E)

8.111 ASCQM Ban Incremental Creation of Immutable Data

Descriptor

ASCQM Ban Incremental Creation of Immutable Data (StringConcatenationStatement)

Description

Identify occurrences in the application model where:

- a text variable is incrementally updated in the <StringConcatenationStatement> string concatenation statement

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

```
...
StringType id="st1"
StorableUnit id="sul" type="st1"
...
ActionElement id="ael" kind="Append"
  Reads "sul"
  Writes "sul"
  ...
...
```

What to report

Roles to report are:

- the <StringConcatenationStatement> string concatenation statement

8.112 ASCQM Ban Static Non-Final Data Element Outside Singleton

Descriptor

ASCQM Ban Static Non-Final Data Element Outside Singleton (StaticNonFinalVariableDeclaration)

Description

Identify occurrences in application model where:

- the <StaticNonFinalVariableDeclaration> declaration of a static non-final variable
- is not part of a Singleton design pattern

KDM outline illustration

KDM elements present in the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
...
MemberUnit id="mul" isStatic="true"
...
```

KDM elements absent from the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
...
ClassUnit id="singleton" exportKind="public"
  MemberUnit id="mul" isStatic="true" exportKind="private" type="singleton"
  MethodUnit id="c" kind="constructor" exportKind="private" type="c_signature"
  Signature
```

```
ParameterUnit id="r1" kind="return" type="singleton"
...
MethodUnit id="refget" kind="method" storableKind="static" exportKind="public"
type="refget_signature"
Signature id="refget_signature"
ParameterUnit id="r2" kind="return" type="singleton"
ActionElement id="a2" name="a2" kind="Return"
Writes "r2"
Reads "su1"
...
...
```

or

```
...
MemberUnit id="mu1" isStatic="true" isFinal="true"
...
```

What to report

Roles to report are:

- the <StaticNonFinalVariableDeclaration> declaration of a static non-final variable

8.113 ASCQM Ban Conversion References to Child Class

Descriptor

ASCQM Ban Conversion References to Child Class (Class, ParentClass, TypeConversion)

Description

Identify occurrences in application model where:

- the <Class> class
- inherits from the <ParentClass> parent class
- which uses the <Class> class in the <TypeConversion> type conversion operation

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

```
{code:title=KDM outline}
ClassUnit id="c1"
...
ActionElement id="ael" kind="InstanceOf|DynCast|TypeCast"
UsesType "c2"
...
ClassUnit id="c2" InheritsFrom="c1"
...
```

and

```
{code:title=KDM outline}
ClassUnit id="c1"
...
ActionElement id="ael" kind="SizeOf"
Reads "mu1" | UsesType "c2"
...
ClassUnit id="c2" InheritsFrom="c1"
MemberUnit id="mu1"
...
```

ISO/IEC 5055:2021(E)

What to report

Roles to report are:

- the <Class> class
- the <ParentClass> parent class
- the <TypeConversion> type conversion operation

8.114 ASCQM Ban Circular Dependencies between Modules

Descriptor

ASCQM Ban Circular Dependencies between Modules (Module, ModuleDependencyCycle)

Description

Identify occurrences in application model where:

- the <Module> module cycles back to itself
- via the <ModuleDependencyCycle> module dependency cycle

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

```
Module id="m1"
  ...
  CallableUnit id="cu1" | MethodUnit id="mu1"
  ...
  CallableUnit id="cu2" | MethodUnit id="mu2"
  ...
  ActionElement id="ae1" kind="Call|PtrCall|MethodCall|VirtualCall" Calls
"cu3|mu3|cu4|mu4"
...
Module id="m2"
  ...
  CallableUnit id="cu3" | MethodUnit id="mu3"
  ...
  CallableUnit id="cu4" | MethodUnit id="mu4"
  ...
  ActionElement id="ae2" kind="Call|PtrCall|MethodCall|VirtualCall" Calls
"cu1|mu1|cu2|mu2"
...
or
```

```
Module id="m1"
  ...
  CallableUnit id="cu1" | MethodUnit id="mu1"
  ...
  CallableUnit id="cu2" | MethodUnit id="mu2"
  ...
  ActionElement id="ae1" kind="Call|PtrCall|MethodCall|VirtualCall" Calls
"cu3|mu3|cu4|mu4"
...
Module id="m2"
  ...
  CallableUnit id="cu3" | MethodUnit id="mu3"
  ...
  CallableUnit id="cu4" | MethodUnit id="mu4"
  ...
  ActionElement id="ae2" kind="Call|PtrCall|MethodCall|VirtualCall" Calls
"cu5|mu5|cu6|mu6"
```

```
...  
Module id="m3"  
  ...  
  CallableUnit id="cu5" | MethodUnit id="mu5"  
  ...  
  CallableUnit id="cu6" | MethodUnit id="mu6"  
  ...  
  ActionElement id="ae2" kind="Call|PtrCall|MethodCall|VirtualCall" Calls  
  "cu1|mu1|cu2|mu2"  
  ...  
...
```

What to report

Roles to report:

- the <Module> module
- the <ModuleDependencyCycle> module dependency cycle

8.115 ASCQM Limit Volume of Commented-Out Code

Descriptor

ASCQM Limit Volume of Commented-Out Code (FunctionProcedureOrMethod, PercentageOfCommentedOutCode, MaxPercentageOfCommentedOutCode)

Description

Identify occurrences in application model where:

- the <FunctionProcedureOrMethod> function, procedure, method, ...
- contains <PercentageOfCommentedOutCode> percentage of lines of code as comments
- which is greater than <MaxPercentageOfCommentedOutCode> value

The <MaxPercentageOfCommentedOutCode> value is a measurement parameter. Its default value is: 5%

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

```
CallableUnit|MethodUnit id="ce1" name="..."  
  SourceRef id="sr1" language="..." snippet="s1"  
  CommentUnit id="cu1"  
  ...  
...
```

What to report

Roles to report:

- the <FunctionProcedureOrMethod> function, procedure, method, ...
- the <PercentageOfCommentedOutCode> value
- the <MaxPercentageOfCommentedOutCode> value

ISO/IEC 5055:2021(E)

8.116 ASCQM Limit Size of Operations Code

Descriptor

ASCQM Limit Size of Operations Code (FunctionProcedureOrMethod, NumberOfNonEmptyLinesOfCode, MaxNumberOfNonEmptyLinesOfCode)

Description

Identify occurrences in application model where:

- the <FunctionProcedureOrMethod> function, procedure, method, ...
- has <NumberOfNonEmptyLinesOfCode> number of non-empty lines of codes
- which is greater than <MaxNumberOfNonEmptyLinesOfCode> value

The <MaxNumberOfNonEmptyLinesOfCode> value is a measurement parameter. Its default value is: 5%

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

```
CallableUnit|MethodUnit id="ce1" name="..."
    SourceRef id="sr1" language="..." snippet="s1"
    ...
...
```

What to report

Roles to report:

- the <FunctionProcedureOrMethod> function, procedure, method, ...
- the <NumberOfNonEmptyLinesOfCode> value
- the <MaxNumberOfNonEmptyLinesOfCode> value

8.117 ASCQM Limit Volume of Similar Code

Descriptor

ASCQM Limit Volume of Similar Code (FunctionProcedureOrMethod1, FunctionProcedureOrMethod2, PercentageOfSimilarElements, MaxPercentageOfSimilarElements)

Description

Identify occurrences in application model where:

- the <FunctionProcedureOrMethod1> function, procedure, method, ...
- the <FunctionProcedureOrMethod2> function, procedure, method, ...
- share <PercentageOfSimilarElements> percentage of similar elements
- which is greater than <MaxPercentageOfSimilarElements> value

The <MaxPercentageOfSimilarElements> value is a measurement parameter. Its default value is: 90%

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

```
CallableUnit|MethodUnit id="ce1" name="..."
    SourceRef id="sr1" language="..." snippet="s1"
    ...
CallableUnit|MethodUnit id="ce2" name="..."
    SourceRef id="sr2" language="..." snippet="s2"
```

...
...

Similarity is based on similarity of code snippets, that is, the number of identical discriminant tokens. The method to determine what is discriminant shall be reported. For example, NLP TF-IDF statistic can be used to identify discriminant tokens.

What to report

Roles to report:

- the <FunctionProcedureOrMethod1> function, procedure, method, ...
- the <FunctionProcedureOrMethod2> function, procedure, method, ...
- the <PercentageOfSimilarElements> value
- the <MaxPercentageOfSimilarElements> value

8.118 ASCQM Limit Algorithmic Complexity via Cyclomatic Complexity Value

Descriptor

ASCQM Limit Algorithmic Complexity via Cyclomatic Complexity Value (FunctionProcedureOrMethod, CyclomaticComplexityValue, MaxCyclomaticComplexityValue)

Description

Identify occurrences in application model where:

- the <FunctionProcedureOrMethod> function, procedure, method, ...
- with <CyclomaticComplexityValue> Cyclomatic Complexity
- which is greater than <MaxCyclomaticComplexityValue>

The <MaxCyclomaticComplexityValue> value is a measurement parameter. Its default value is: 20

Reference for Cyclomatic Complexity definition is Watson, A. H., McCabe, T., "Structured Testing: A Testing Methodology Using the Cyclomatic Complexity Metric", NIST Special Publication 500-235, September 1996

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

```
CallableUnit|MethodUnit id="ce1" name="..."
  ActionElement id="ae1"
    Flow|TrueFlow|FalseFlow|GuardedFlow ...
  ActionElement id="ae2"
    Flow|TrueFlow|FalseFlow|GuardedFlow ...
  ActionElement id="ae3"
    Flow|TrueFlow|FalseFlow|GuardedFlow ...
  ...
...
```

Cyclomatic Complexity $v(G)$ being the difference between the number of ControlFlow elements and the number of ActionElement elements plus 2.

What to report

Roles to report:

- the <FunctionProcedureOrMethod> function, procedure, method, ...
- the <CyclomaticComplexityValue> value

ISO/IEC 5055:2021(E)

- the <MaxCyclomaticComplexityValue> value

8.119 ASCQM Limit Number of Data Access

Descriptor

ASCQM Limit Number of Data Access (FunctionProcedureOrMethod, NumberOfDataAccess, MaxNumberOfDataAccess)

Description

Identify occurrences in application model where:

- the <FunctionProcedureOrMethod> function, procedure, method, ...
- with <NumberOfDataAccess> number of data accesses
- which is greater than <MaxNumberOfDataAccess>

The <MaxNumberOfDataAccess> value is a measurement parameter. Its default value is: 7

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

```
PlatformModel

    ActionElement id="ae7" kind="PlatformAction"  
    ActionElement id="ae8" kind="PlatformAction"  
  ...  
  ...  
  ...
```

What to report

Roles to report:

- the <FunctionProcedureOrMethod> function, procedure, method, ...
- the <NumberOfDataAccess> value
- the <MaxNumberOfDataAccess> value

8.120 ASCQM Ban Excessive Number of Children

Descriptor

ASCQM Ban Excessive Number of Children (Class, NumberOfChildren, MaxNumberOfChildren)

Description

Identify occurrences in application model where:

- the <Class> class
- with <NumberOfChildren> number of children
- which is greater than <MaxNumberOfChildren>

The <MaxNumberOfChildren> value is a measurement parameter. Its default value is: 10

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

```
ClassUnit id="cu0"  
ClassUnit id="cu1" Extends="cu0"  
ClassUnit id="cu2" Extends="cu0"

ClassUnit id="cu6" Extends="cu0"  
ClassUnit id="cu7" Extends="cu0"  
ClassUnit id="cu8" Extends="cu0"  
ClassUnit id="cu9" Extends="cu0"  
ClassUnit id="cu10" Extends="cu0"  
ClassUnit id="cu11" Extends="cu0"  
...
```

ISO/IEC 5055:2021(E)

What to report

Roles to report:

- the <Class> class
- the <NumberOfChildren> value
- the <MaxNumberOfChildren> value

8.121 ASCQM Ban Excessive Number of Inheritance Levels

Descriptor

ASCQM Ban Excessive Number of Inheritance Levels (Class, NumberOfInheritanceLevels, MaxNumberOfInheritanceLevels)

Description

Identify occurrences in application model where:

- the <Class> class
- with <NumberOfInheritanceLevels> number of inheritance levels
- which is greater than <MaxNumberOfInheritanceLevels>

The <MaxNumberOfInheritanceLevels> value is a measurement parameter. Its default value is: 7

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

```
ClassUnit id="cu1"  
ClassUnit id="cu2" Extends="cu1"  
ClassUnit id="cu3" Extends="cu2"  
ClassUnit id="cu4" Extends="cu3"  
ClassUnit id="cu5" Extends="cu4"  
ClassUnit id="cu6" Extends="cu5"  
ClassUnit id="cu7" Extends="cu6"  
ClassUnit id="cu8" Extends="cu7"  
ClassUnit id="cu9" Extends="cu8"  
...
```

What to report

Roles to report:

- the <Class> class
- the <NumberOfInheritanceLevels> value
- the <MaxNumberOfInheritanceLevels> value

8.122 ASCQM Ban Usage of Data Elements from Other Classes

Descriptor

ASCQM Ban Usage of Data Elements from Other Classes (Class, OtherClass, Reference)

Description

Identify occurrences in application model where:

- the <Class> class
- which uses the <Member> non static final member

- of the <OtherClass> other class
- in the <Reference> reference operation

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

```
ClassUnit id="c1"  
  ...  
  ActionElement id="ae1" kind="MemberSelect|MemberReplace"  
    Reads | Writes "mu1"  
    Addresses "c2"  
  ...  
ClassUnit id="c2"  
  ...  
  MemberUnit id="mu1" isFinal="false" isStatic="false"  
  exportKind="public|protected|private"  
  ...  
  ...
```

What to report

Roles to report are:

- the <Class> class
- the <OtherClass> other class
- the <Reference> reference operation

8.123 ASCQM Ban Control Flow Transfer

Descriptor

ASCQM Ban Control Flow Transfer (ControlFlowJumpStatement)

Description

Identify occurrences in application model where:

- the <ControlFlowJumpStatement> unconditional transfer of control flow
- excluding break statement in switch

KDM outline illustration

KDM elements present in the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
ActionElement id="ae1" kind="Goto"
```

KDM elements absent from the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
ActionElement id="ae1" kind="Switch"  
  ...  
  GuardedFlow "gf1"  
  ...  
  FalseFlow "ff1"  
ActionElement id="gf1" kind="Guard"  
  ...  
  Flows "f1"  
  ...  
ActionElement id="f1" kind="Compound"  
  ...
```

ISO/IEC 5055:2021(E)

```
ActionElement id="g1" kind="Goto"  
    Flows "e1"  
...
```

or:

```
ActionElement id="ae1" kind="Switch"  
    ...  
    FalseFlow "ff1"  
ActionElement id="ff1" kind="Compound"  
    ...  
    ActionElement id="g1" kind="Goto"  
        Flows "e1"  
...
```

What to report

Roles to report are:

- the <ControlFlowJumpStatement> unconditional transfer of control flow

8.124 ASCQM Ban Loop Value Update within Incremental and Decremental Loop

Descriptor

ASCQM Ban Loop Value Update within Incremental and Decremental Loop (LoopVariable, LoopVariableUpdateStatement)

Description

Identify occurrences in application model where:

- the incremental or decremental loop condition rely on the <LoopVariable> variable
- which is updated in the loop body by the <LoopVariableUpdateStatement> update statement

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

```
ActionElement id="a1" kind="compound"  
    ActionElement id="a2" kind="Assign"  
        Reads ...  
        Writes "LoopVariable"  
        Flows "a3"  
ActionElement id="a3" kind="LessThan|LessThanOrEqual|GreaterThan|GreaterThanOrEqual"  
    Reads "LoopVariable"  
    Reads ...  
    TrueFlow "a4"  
    FalseFlow "a6"  
    ActionElement id="a4" kind=...  
        ...  
        ActionElement id="LoopVariableUpdateStatement" kind="Assign"  
            ...  
            Writes "LoopVariable"  
            ...  
        ...  
    ActionElement id="a5" kind="Incr|Decr"  
        Addresses "LoopVariable"  
        Flows "a3"  
    ActionElement id="a6" kind="Nop"
```

What to report

Roles to report:

- the <LoopVariable> variable
- the <LoopVariableUpdateStatement> update statement

8.125 ASCQM Limit Number of Parameters

Descriptor

ASCQM Limit Number of Parameters (FunctionProcedureOrMethod, NumberOfParameter, MaxNumberOfParameter)

Description

Identify occurrences in application model where:

- the <FunctionProcedureOrMethod> function, procedure, method, ...
- has <NumberOfParameter> parameters
- which is greater than <MaxNumberOfParameter>

The <MaxNumberOfParameter> value is a measurement parameter. Its default value is: 7

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

```
CallableUnit id="c1" name="c1" callableKind="regular|external|stored" type="c1_signature"  
  Signature id="c1_signature"  
    ParameterUnit id="p1" paramterKind="byValue|byReference|byName|variadic"  
    ParameterUnit id="p2" paramterKind="byValue|byReference|byName|variadic"  
    ParameterUnit id="p3" paramterKind="byValue|byReference|byName|variadic"  
    ParameterUnit id="p4" paramterKind="byValue|byReference|byName|variadic"  
    ParameterUnit id="p5" paramterKind="byValue|byReference|byName|variadic"  
    ParameterUnit id="p6" paramterKind="byValue|byReference|byName|variadic"  
    ParameterUnit id="p7" paramterKind="byValue|byReference|byName|variadic"  
    ParameterUnit id="p8" paramterKind="byValue|byReference|byName|variadic"  
    ...
```

and

```
MethodUnit id="m1" name="m1" type="m1_signature"  
  Signature id="m1_signature"  
    ParameterUnit id="p1" paramterKind="byValue|byReference|byName|variadic"  
    ParameterUnit id="p2" paramterKind="byValue|byReference|byName|variadic"

```

What to report

Roles to report are:

- the <FunctionProcedureOrMethod> function, procedure, method, ...
- the <NumberOfParameter> value
- the <MaxNumberOfParameter> value

ISO/IEC 5055:2021(E)

8.126 ASCQM Ban Unreferenced Dead Code

Descriptor

ASCQM Ban Unreferenced Dead Code (FunctionProcedureOrMethod)

Description

Identify occurrences in application model where:

- the <FunctionProcedureOrMethod> function, procedure, method, ...
- which is never called

KDM outline illustration

KDM elements present in the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
...  
CallableUnit|MethodUnit id="ce1" name="..."  
...
```

KDM elements absent from the application model

KDM outline illustrating only the essential elements related to micro KDM:

```
...  
ActionElement id="ae1" kind="Call|PtrCall|MethodCall|VirtualCall"  
  Calls "ce1"  
...
```

What to report

Roles to report are:

- the <FunctionProcedureOrMethod> function, procedure, method, ...

8.127 ASCQM Ban Excessive Number of Concrete Implementations to Inherit From

Descriptor

ASCQM Ban Excessive Number of Concrete Implementations to Inherit From (Class, NumberOfConcreteClassInheritances, MaxNumberOfConcreteClassInheritances)

Description

Identify occurrences in application model where:

- the <Class> class
- inherits from <NumberOfConcreteClassInheritances> classes with concrete implementations
- which is greater than <MaxNumberOfConcreteClassInheritances> threshold value

The <MaxNumberOfConcreteClassInheritances> value is a measurement parameter. Its default value is: 1

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

```
ClassUnit id="cu1" isAbstract="false"  
ClassUnit id="cu2" isAbstract="false"  
ClassUnit id="cu3" Extends="cu1 cu2"
```

What to report

Roles to report are:

- the <Class> class
- the <NumberOfConcreteClassInheritances> value
- the <MaxNumberOfConcreteClassInheritances> value

8.128 ASCQM Limit Number of Outward Calls

Descriptor

ASCQM Limit Number of Outward Calls (FunctionProcedureOrMethod, NumberOfOutwardCalls, MaxNumberOfOutwardCalls)

Description

Identify occurrences in application model where:

- the <FunctionProcedureOrMethod> function, procedure, method, ...
- calls <NumberOfOutwardCalls> other functions, procedures, methods, ...
- which is greater than <MaxNumberOfOutwardCalls> times

The <MaxNumberOfOutwardCalls> value is a measurement parameter. Its default value is: 5

KDM outline illustration

KDM outline illustrating only the essential elements related to micro KDM:

- the <MaxNumberOfOutwardCalls> value

8.129 ASCQM Sanitize User Input used in Expression Language Statement

Descriptor

ASCQM Sanitize User Input used in Expression Language Statement (ExpressionLanguageSanitization)

ISO/IEC 5055:2021(E)

Description

Identify occurrences in application model where

- an external value is entered into the application through the <UserInput> user interface input,
- transformed throughout the application along the <TransformationSequence> sequence,

and ultimately used in <ExpressionLanguageExpression> EL expression, none of the callable or method control element of the transformation sequence being a vetted sanitization operation from the <ExpressionLanguageSanitizationControlElementList> list of vetted sanitization operations. The list of vetted sanitization primitives is an input to provide to the measurement process.

  ActionElement id="g1" kind="Goto"  
  Flows "e1"  
...  
ActionElement id="e1" ...
```

What to report

Roles to report are:

- the <Switch> switch

9 Calculation of the Quality Measures

After reviewing several alternatives, a count of total violations of quality rules was selected as the best option for a base measure for each of the four software quality characteristics covered in this specification. Software quality characteristic measures have frequently been scored at the component level and then aggregated to develop an overall score for the application. However, scoring at the component level was rejected because many violations of quality rules cannot be isolated to a single component, but rather involve interactions among several components. Therefore, each Automated Source Code Quality Measure score is computed as the sum of its quality measure elements counted across an entire application.

The calculation of an Automated Source Code Quality Measure score progresses as follows:

- Detection pattern score is the count of occurrences,
- Weakness score is its detection pattern score,
- Quality characteristic score is the sum of its weakness scores.

That is,

Occurrence Count of Weakness $x = \Sigma$ (Occurrences of ASCQM- y)

Where x = a CWE weakness (CWE-119, CWE-120, etc.)

y = a detection pattern for weakness x

and

Occurrence Count of Weakness Category $x = \Sigma$ (Occurrence Count of ASCQM- y)

Where x = a software quality characteristic (Reliability, Security, Performance Efficiency, Maintainability)

y = a detection pattern for quality characteristic x

Annex A

Consortium for IT Software Quality (CISQ)

The purpose of the Consortium for IT Software Quality (CISQ) is to develop specifications for automated measures of software quality characteristics taken on source code. These measures were designed to provide international standards for measuring software structural quality that can be used by IT organizations, IT service providers, and software vendors in contracting, developing, testing, accepting, and deploying IT software applications. Executives from the member companies that joined CISQ prioritized the quality characteristics of Reliability, Security, Performance Efficiency, and Maintainability to be developed as measurement specifications.

CISQ strives to maintain consistency with ISO/IEC standards to the extent possible, and in particular with the ISO/IEC 25000 series that replaces ISO/IEC 9126 and defines quality measures for software systems. In order to maintain consistency with the quality model presented in ISO/IEC 25010, software quality characteristics are defined for the purpose of this specification as attributes that can be measured from the static properties of software, and can be related to the dynamic properties of a computer system as affected by its software. However, the 25000 series, and in particular ISO/IEC 25023 which elaborates quality characteristic measures, does not define these measures at the source code level. Thus, this and other CISQ quality characteristic specifications supplement ISO/IEC 25023 by providing a deeper level of software measurement, one that is rooted in measuring software attributes in the source code.

Companies interested in joining CISQ held executive forums in Frankfurt, Germany; Arlington, VA; and Bangalore, India to set strategy and direction for the consortium. In these forums four quality characteristics were selected as the most important targets for automation—reliability, security, performance efficiency, and maintainability. These attributes cover four of the eight quality characteristics described in ISO/IEC 25010.

The Consortium for IT Software Quality (CISQ), a consortium managed by OMG, was formed in 2010 to create international standards for automating measures of size and structural quality characteristics from source code. These measures are intended for use by IT organizations, IT service providers, and software vendors in contracting, developing, testing, accepting, and deploying software systems. Executives from the member companies that joined CISQ prioritized Reliability, Security, Performance Efficiency, and Maintainability as the initial structural quality measures to be specified.

An international team of experts drawn from CISQ's 24 original companies formed into working groups to define CISQ measures. Weaknesses that had a high probability of causing reliability, security, performance efficiency, or maintainability problems were selected for inclusion in the four measures. The original CISQ members included IT departments in Fortune 200 companies, system integrators/outsourcers, and vendors that provide quality-related products and services to the IT market. The experts met several times per year for two years in the US, France, and India to develop a broad list of candidate weaknesses. This list was pared down to a set of weaknesses they believed had to be remediated to avoid serious operational or cost problems. These 86 weaknesses became the foundation of the original specifications of the automated source code measures for Reliability, Security, Performance Efficiency, and Maintainability.

Annex B

Common Weakness Enumeration (CWE)

The Common Weakness Enumeration (CWE) repository (<http://cwe.mitre.org/>) maintained by MITRE Corporation is a collection of over 800 weaknesses in software architecture and source code that malicious actors have used to gain unauthorized entry into systems or to cause malicious actions. CWE has recently expanded its coverage beyond security to embrace other severe weaknesses that affect software-intensive systems. Consequently, all Automated Source Code Quality Measure weaknesses have been assigned CWE numbers and are included in the CWE Repository. The CWE is a widely used industry source (<http://cwe.mitre.org/community/citations.html>) that provides a foundation for the ITU-T X.1524 and ISO/IEC standard, in addition to 2 ISO/IEC technical reports:

- SERIES X: DATA NETWORKS, OPEN SYSTEM COMMUNICATIONS AND SECURITY Cybersecurity information exchange – Vulnerability/state exchange - Common weakness enumeration (CWE)
- ISO/IEC 29147:2014 Information Technology -- Security Techniques -- Vulnerability Disclosure"
- ISO/IEC TR 24772:2013 Information technology -- Programming languages -- Guidance to avoiding vulnerabilities in programming languages through language selection and use
- ISO/IEC Technical Report is ISO/IEC TR 20004:2012 Information Technology -- Security Techniques -- Refining Software Vulnerability Analysis under ISO/IEC 15408 and ISO/IEC 18045

Since the CWE is recognized as the primary industry repository of security weaknesses, it is supported by the majority of vendors providing tools and technology in the software security domain (<http://cwe.mitre.org/compatible/compatible.html>), such as Coverity, HP Fortify, Klockwork, IBM, CAST, Veracode, and others. These vendors already have capabilities for detecting many of the CWEs. Industry experts who developed the CWE purposely worded the CWEs to be language and application agnostic in order to allow vendors to develop detectors specific to a wide range of languages and application types beyond the scope that could be covered in the CWE. Since some of the CWEs may not be relevant in some languages, the reduced opportunity for anti-patterns in those cases will be reflected in the scores.

Annex C

Related Quality Measures

C.1 Functional Density of Weaknesses

To compare quality results among different applications, the Automated Source Code Quality Measures can be normalized by size to create a density measure. There are several size measures with which the density of quality violations can be normalized, such as lines of code and Function Points. These size measures, if properly standardized, can be used for creating a density measure for use in benchmarking the quality of applications. ISO/IEC 19515:2019 — Object Management Group Automated Function Points (AFP) offers an automatable size measure that is standardized. This Automated Function Points measure was adapted from the International Function Point User Group's (IFPUG) counting guidelines and is commercially supported. Although other size measures can be used to evaluate the density of source code weaknesses, the following density measure for weaknesses is derived from ISO's Automated Function Points and the Automated Source Code Security Measure. Thus, the functional density of weaknesses for one of the measures is a simple division expressed as follows.

$$\text{ASCxM-density} = \text{ASCxM} / \text{AFP}$$

where x = a software quality characteristic (R, S, PE, M)

C.2 Additional Derived Measures

There are many additional weighting schemes that can be applied to the Automated Source Code Quality Measures or to the quality measure elements that composing them. Table 6 presents several weighted measure candidates and their potential uses. However, these weighting schemes are not derived from any existing standards and are therefore not normative.

Table 6 — Informative Weighting Schemes for Security Measurement

Weighting scheme	Potential uses
Weight each quality measure element by its severity	Measuring risk of quality problems such as data theft, outages, response degradation, etc.
Weight each quality measure element by its effort to fix	Measuring cost of ownership, estimating future corrective maintenance effort and costs
Weight each module or application component by its density of quality weaknesses	Prioritizing modules or application components for corrective maintenance or replacement

Annex D

Relationship to ISO/IEC 25000 Series Standards

Relationship of the Automated Source Code Quality Measures to ISO 25000 Series Standards (SQuaRE) ISO/IEC 25010 defines the product quality model for software-intensive systems (Figure 1). This model is composed of 8 quality characteristics, four of which are the subject of the Automated Source Code Quality Measures (ASCQM) and are indicated in gray. Each of ISO/IEC 25010's eight quality characteristics consists of several quality sub-characteristics that define the domain of issues covered by their parent quality characteristic. The ASCQM measures conform to the definitions in ISO/IEC 25010. The sub-characteristics of each quality characteristic were used to ensure each of the ASCQM measures covered the domain of issues in its area. ISO/IEC 25010 is currently undergoing revision. The ASCQM measures will conform to definitions in the revised ISO/IEC 25010-2 when published.

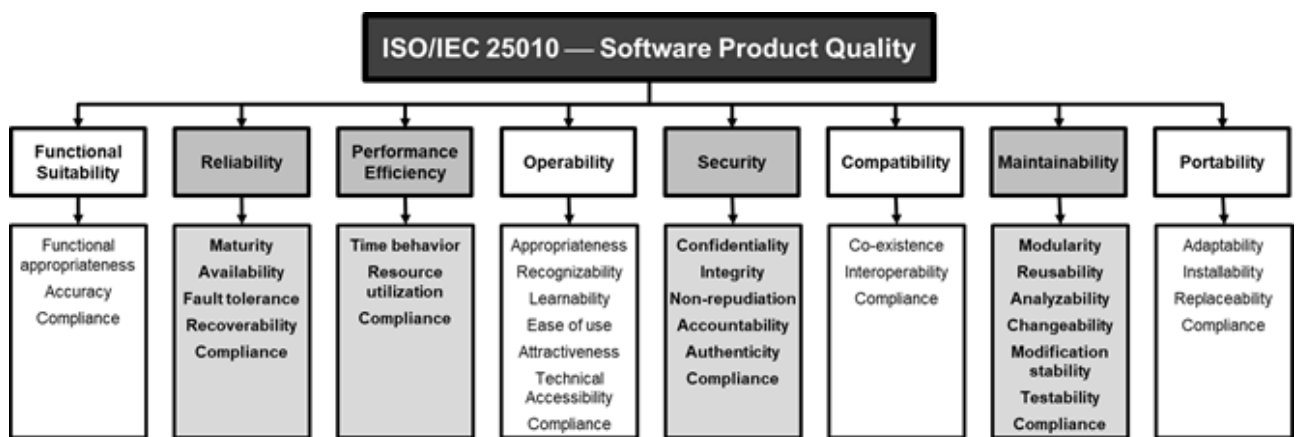

Figure 1 — Software Quality Characteristics from ISO/IEC 25010 with ASCQM content areas highlighted.

ISO/IEC 25023 establishes a framework of software quality characteristic measures wherein each quality sub-characteristic consists of a collection of quality attributes that can be quantified as quality measure elements. A quality measure element quantifies a unitary measurable attribute of software, such as the violation of a quality rule. Figure 2 presents an example of the ISO/IEC 25020 quality measurement framework using a partial decomposition for the Automated Source Code Security Measure.

Figure 2 displays the hierarchical relationships indicating how ASCQM measures conform to the reference measurement structure established in ISO/IEC 25020 that governs software quality measures in ISO/IEC 25023. This structure is presented using the Automated Source Code Security Measure as an example. The ASCQM measures use ISO's quality subcharacteristics for ensuring that the ASCQM weaknesses covered the measurable domain of an ISO quality characteristic as defined in ISO/IEC 25010. ASCQM weaknesses (CWES) correspond to ISO's quality attributes. ASCQM weaknesses are represented as one or more detection patterns among structural code elements in the software. Variations in how a weakness may be instantiated are represented by its association with several different detection patterns. Each occurrence of a detection pattern represents an occurrence of a weakness in the software. Occurrences of these detection patterns in the software correspond to ISO's quality measure elements and are the elements calculated in the ASCQM measures.

ISO/IEC 5055:2021(E)

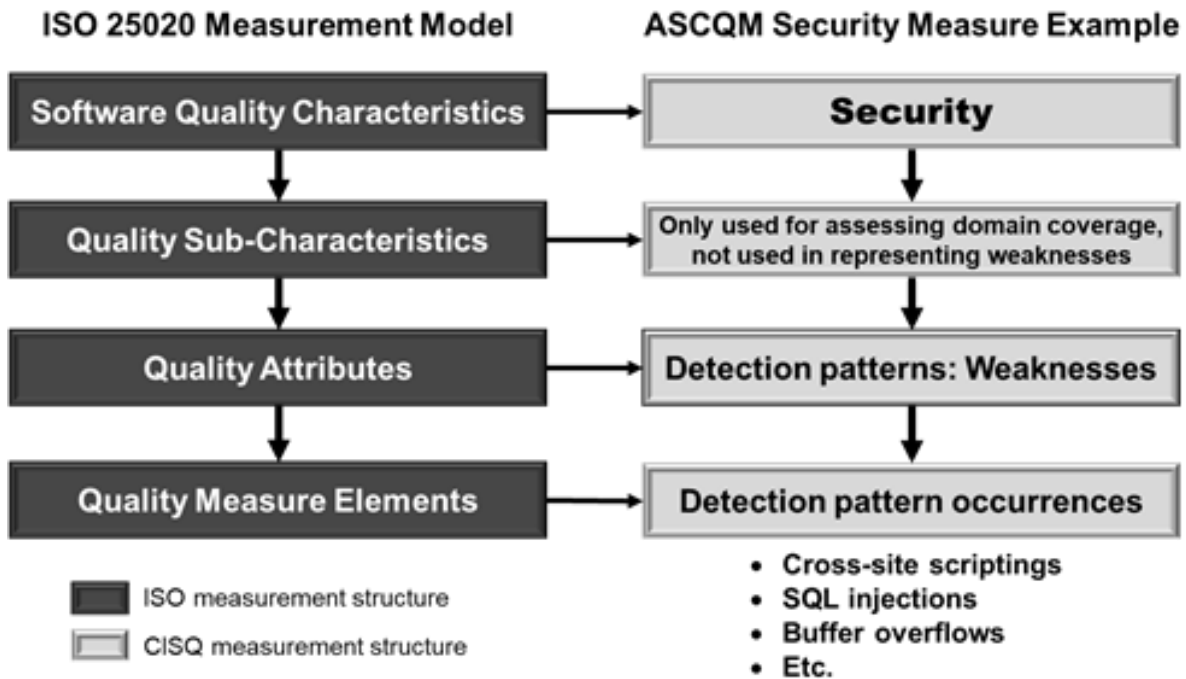

Figure 2 — ISO/IEC 25020 Framework for Software Quality Characteristics Measurement

Clause 6 of this specification lists weaknesses grouped by quality characteristic that correspond to ISO/IEC 25010's quality attributes. A weakness is detected by identifying patterns of code elements in the software (called detection patterns) that instantiate the weakness. Each detection pattern equates to a quality measure element used in calculating the ASCQM measures. In Clause 7, quality attributes (weaknesses) are transformed into the KDM and SPMS-based detection patterns that represent them. The ASCQM measures are then calculated by detecting and counting occurrences of detection patterns, each of which indicates the existence of a weakness in the software.
